

**VEER NARMAD SOUTH GUJARAT  
UNIVERSITY**

**FACULTY OF ARCHITECTURE**

**PROGRAM:**

**BACHLORE OF ARCHITECTURE**

**REVISED**

**NEW SYLLABUS & EXAM  
SCHEME**

**(EFFECTIVE FROM 2022-2023)**

Name of Programme	Bachelor of Architecture
Abbreviation	B. Arch.
Duration	5 years
Admission to B. Arch.	<ol style="list-style-type: none"> <li>1. The candidate shall be admitted to an architecture programme after passing 10+2 or equivalent examination with Physics and Mathematics as compulsory subjects along with either Chemistry or Biology or Technical Vocational subject or Computer Science or Information Technology or Informatics Practices or Engineering Graphics or Business Studies with at least 45% marks in aggregate or passed 10+3 Diploma Examination with Mathematics as compulsory subject with at least 45% marks in aggregate.</li> <li>2. Candidates belonging to SC, ST, SEBC (Non-Creamy Layer), and EWS categories shall be eligible with a minimum of 40% aggregate marks, as per the reservation policy of the Government of Gujarat.</li> <li>3. The candidate needs to qualify Aptitude Test conducted by the Council of Architecture (NATA) or any other approved by the Council.</li> <li>4. Merit list shall be prepared based on 50% weightage to qualifying exam and 50% weightage to aptitude test for the admission purpose.</li> </ol>
Objective of Program	<ol style="list-style-type: none"> <li>1. To study the evolution of mankind in terms of various geographical, cultural, psychological and socio-economic aspects as determinants of built environment.</li> <li>2. Learn the technology to build various types of buildings and surroundings by the knowledge of materials, construction techniques using principles of various structural systems and use of digital tools, software, smart buildings and technologies with AI.</li> <li>3. To learn how to build various structure; functional, stable, aesthetical and sustainable, using the knowledge of technology and principles of visual and applied arts as per the needs and aspirations of the society. The student should also learn designing as per the Development Control Regulations, contexts and climate.</li> <li>4. To learn how to communicate the design ideas to the stakeholders like; the client, contractors, workers, authorities and the society, through various mediums such as graphical presentation, write-up, verbal and other means of communication including command over digital technology, tools and technical terms.</li> <li>5. To learn how to render architectural services as per the provisions by the council of Architecture and promote aesthetic, scientific and practical efficiency of the profession.</li> </ol>

<p>Program Outcomes</p>	<p><b>PO1:</b> Graduates will demonstrate a comprehensive understanding of architectural theories, principles, history, and contemporary practices.</p> <p><b>PO2:</b> Graduates will be able to apply creative and critical thinking to develop innovative architectural solutions that address user needs and contextual requirements.</p> <p><b>PO3:</b> Graduates will gain technical knowledge of building materials, construction techniques, structures, and building services, and will integrate these into their design process.</p> <p><b>PO4:</b> Graduates will be able to conduct research, analyse data, and synthesize information to inform architectural decision-making.</p> <p><b>PO5:</b> Graduates will effectively communicate architectural ideas and solutions through oral, written, and visual means to diverse audiences.</p> <p><b>PO6:</b> Graduates will understand and uphold professional ethics, responsibilities, and societal values in architectural practice.</p> <p><b>PO7:</b> Graduates will demonstrate awareness of environmental, social, and cultural contexts, and will promote sustainable and inclusive design practices.</p> <p><b>PO8:</b> Graduates will be able to work collaboratively in multidisciplinary teams to address complex architectural challenges.</p>
<p>Program Specific Outcomes</p>	<p><b>PSO 1:</b> Students will develop the ability to design and develop innovative architectural solutions, demonstrating a clear understanding of architectural design principles, elements, and the creative process.</p> <p><b>PSO 2:</b> Students will acquire proficiency in building materials, construction techniques, structural systems, and building services (such as plumbing, electrical, and HVAC systems), enabling them to integrate technical considerations into architectural design.</p> <p><b>PSO 3:</b> Students will gain knowledge of urban design principles, urban planning strategies, sustainable development, and smart city</p>

concepts, preparing them to contribute to the creation of resilient and sustainable built environments.

**PSO 4:** Students will develop the ability to communicate architectural ideas and solutions through various sources, and will learn to work collaboratively in multidisciplinary teams to address complex design challenges.

**PSO 5:** Students will understand professional ethics and responsibilities, and will acquire knowledge of project management principles and practices, equipping them for successful careers in the field of architecture.

## SEMESTER - 1

### Basic Design – I

Course Code						
Course Title	<b>Basic Design – I</b>					
Marks	100	Credits	4			
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To enable students to apply fundamental principles and elements of design in creating meaningful relationships between buildings, users, and their environment.					
Course Objective	To develop creativity and problem-solving skills by applying basic design principles, colour theories, and elements through hands-on exercises to encourage exploration, experimentation, and innovative thinking.					
Course Outcomes	<p><b>CO1:</b> Students will be able to understand elements and principles of visual arts.</p> <p><b>CO2:</b> Students will develop the ability to observe and interpret visual and spatial relationships in the nature and apply into designing built form.</p> <p><b>CO3:</b> Students will demonstrate skills in translating abstract concepts into two-dimensional and three-dimensional design compositions.</p> <p><b>CO4:</b> Students will gain proficiency in using various tools, media, and techniques to express design ideas effectively.</p> <p><b>CO5:</b> Students will be able to analyse basic design works, including their own and others', using appropriate design vocabulary and reasoning.</p>

## Architectural Design Studio I

Course Code						
Course Title	<b>Architectural Design Studio I</b>					
Marks	100	Credits	4			
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 ( Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop foundational design skills by exploring form, space, and visual expression through the fundamental elements and principles of design.					
Course Objective	To introduce the basic elements and principles of design, while developing their ability to observe, extract, and creatively interpret forms and spaces. It aims to build foundational skills in visual expression, spatial organization, and conceptual thinking.					
Course Outcomes	<p><b>CO1:</b> Students will be able to develop understanding of the fundamental elements and principles of design.</p> <p><b>CO2:</b> To observe, analyse, and extract visual and spatial information from the environment to develop design ideas.</p> <p><b>CO3:</b> Students will be able to generate conceptual design solutions through interactive processes involving drawing, model making, and exploration of materials.</p> <p><b>CO4:</b> Students will be able to understand spatial relationships, form, function, and human scale.</p> <p><b>CO5:</b> Students will be able to communicate design ideas effectively using appropriate visual and verbal techniques.</p>

## Building Materials and Construction I

Course Code						
Course Title	<b>Building Materials And Construction - I</b>					
Marks	100	Credits			4	
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To explore fundamental building materials, structural systems, and construction techniques to understand how buildings are built and function.					
Course Objective	To develop an understanding of fundamental building materials, building elements, structural systems and their functional behaviour with focusing Masonry and foundation systems in building construction.					
Course Outcomes	<p><b>CO1:</b> Students will gain an understanding of the properties and applications of basic construction materials for appropriate use in building construction.</p> <p><b>CO2:</b> Students will be able to explain the key components of building structures, including both substructure and superstructure.</p> <p><b>CO3:</b> Students will learn different methods, techniques of construction and suitability for various building types.</p> <p><b>CO4:</b> Students will be able to learn different types of brick and stone masonry in forms of bonds and construction techniques.</p> <p><b>CO5:</b> Students will understand the design and construction of building openings and various forms of arches.</p>

## Architectural Graphical Skill - I

Course Code						
Course Title	<b>Architectural Graphical Skill I</b>					
Marks	100	Credits	4			
Teaching per Week	04 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop drawing skills to communicate design.					
Course Objective	<ul style="list-style-type: none"> <li>• To develop foundational skills in the presentation of geometric forms and compositions as tools for design communication.</li> <li>• To develop essential skills to prepare technical and architectural drawings manually or computer aided for effective design communication.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will develop proficiency in manual drafting by using drawing instruments, line compositions, lettering techniques, and architectural abbreviations.</p> <p><b>CO2:</b> Students will apply geometric principles to create orthographic, isometric, axonometric, and oblique projections for accurate architectural representation.</p> <p><b>CO3:</b> Students will demonstrate competence in computer-aided design (CAD) by preparing technical drawings, representations of geometry, and architectural compositions using digital tools.</p> <p><b>CO4:</b> Students will integrate manual and digital drawing methods, employing software tools for effective architectural presentation and communication.</p>

## Structural Design Systems I

Course Code						
Course Title	<b>Structural Design Systems I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 ( Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To make the students aware of Applied Mechanics and Structural systems mainly statics, dynamics, kinematics, kinetics & mechanics of solids.					
Course Objective	<ul style="list-style-type: none"> <li>● To provide the fundamental knowledge of Applied Mechanics, Structural Systems &amp; Analysis.</li> <li>● To acquaint students with concepts of Basics Engineering Mechanics and its applications on the Building components and systems.</li> <li>● To analyse and understand fundamentals of different structural systems.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> A student will gain comprehensive knowledge of the fundamental components of Basic Applied Mechanics.</p> <p><b>CO2:</b> A student will develop understanding of different forms of forces and their systems.</p> <p><b>CO3:</b> A student will learn diverse forces employed in Equilibrium, Resultant, Simple Stress and Strain.</p> <p><b>CO4:</b> A student will be able to interpret the flexural elements, including beams and trusses, along with their applications.</p> <p><b>CO5:</b> A student will develop understanding of determinate and indeterminate structures, to be will applied for a suitable structural analysis method.</p>

	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					

Prerequisite	
Course Content	<p><b>Unit 1:</b></p> <p><b>1.1 Introduction</b></p> <p>1.1.1 Introduction Fundamental principles of Engineering Mechanics, Newton's laws of motion, law of parallelogram of forces, principle of transmissibility, concept of rigid body particle.</p> <p><b>1.2 Natural forms</b></p> <p>1.2.1 Understanding Nature a creative base for understanding structure, correlation between Natural &amp; manmade structure.</p> <p><b>Unit 2:</b></p> <p><b>2.1 Forces</b></p> <p>2.1.1 Introduction to types of forces, Static loading, Time dependent loading, Impact loading, Cause &amp; effect of various forces like Dead load, Imposed load, Wind load, Earthquake load, Hydrostatic load, erection force etc. on building. Effect of physical form on load transfer i.e. Forces acting through point, distributed forces on line &amp; area.</p> <p><b>2.2 Force systems</b></p> <p>2.2.1 Free body diagram, Resolution of forces into components, Types of force systems, Concurrent, coplanar, non-concurrent, etc. Forces in plane &amp; space. Calculation of resultant for coplanar parallel &amp; coplanar concurrent force system, calculation of moment.</p> <p><b>Unit 3:</b></p> <p><b>3.1 Equilibrium</b></p> <p>3.1.1 Introduction to Equilibrium, Conditions of <b>equilibrium</b> for the coplanar parallel &amp; coplanar concurrent force system, Types of supports, Determinacy, &amp; Stability, Basic <b>behaviour</b> of elements in load transfer i.e. Bending, torsion, shear, tension, compression, etc.</p> <p><b>3.2 Simple stresses &amp; strain :</b></p> <p>3.2.1 Introduction, behaviour of material under loading, stress &amp; strain due to axial force, Hook's law, working stress, Ultimate stress, factor of safety, permissible stress, lateral strain.</p> <p><b>Unit 4:</b></p> <p><b>4.1 Beam</b></p> <p>4.1.1 Introduction as a flexural element, simply supported, overhanging &amp; cantilever beams, determinacy, calculation of reaction at supports for beam and their application.</p> <p><b>4.2 Truss</b></p> <p>4.2.1 Introduction, Types of truss, Analysis of a plane truss. Use of graphical method for plane truss.</p>

	<p>Introduction to Space truss, Application.</p> <p><b>Unit 5:</b></p> <p><b>5.1 Shear force &amp; Bending moment diagram:</b></p> <p><b>5.1.1 Determinate Beams :</b> Introduction to shear force, bending, calculation of Shear force &amp; bending moment for beams subjected to various types of load combination i.e. point load, distributed load with various support conditions like simply supported, overhanging, cantilever, etc. Relationship between bending moment &amp; shear force diagram, Determination of point of contra flexure, Application of Shear force &amp; bending moment diagram.</p> <p><b>5.1.2 Shear force &amp; Bending moment diagram for Determinate &amp; Indeterminate:</b></p> <p>Plane Frames &amp; Arches: Behaviour of Statically determinate &amp; Indeterminate plane frames subjected to gravity &amp; lateral load. Basic understanding of shear force &amp; bending moment diagram for the same. Behaviour of three hinges &amp; two hinge Arch under point load and uniformly distributed force Understanding of bending moment diagram for Arches.</p>

## Humanities - I

Course Code						
Course Title	<b>Humanities - I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To understand mankind, evolution and formation of societies in terms of needs and aspirations to create human centric design.					
Course Objective	<ul style="list-style-type: none"> <li>• To examines key social theories and perspectives that help in understanding evolution of the society, culture, and community, particularly in relation to architectural design and urban development.</li> <li>• To introduce basic concepts of sociology; psychology and their roles; social theories and their perspectives on society.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Student will understand the basic concepts, scope, and approaches of sociology and their relevance to architecture and the built environment.</p> <p><b>CO2:</b> Students will analyse the structure and characteristics of Human Settlements with perspective of sociology.</p> <p><b>CO3:</b> Students will able to interpret social stratification, including caste dynamics, cultural practices, and the impact of social change in Indian society.</p> <p><b>CO4:</b> Students will able to process the urbanization as a social phenomenon, including its historical development, related theories, and contemporary urban challenges.</p>

## Communication Skills - I

Course Code						
Course Title	<b>Communication Skills - I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop listening, speaking, and writing skills, explore different communication styles and formats, and introduce alternative media like posters, collages, and text analysis.					
Course Objective	To develop students' ability to communicate ideas clearly and effectively through verbal and nonverbal means, while enhancing skills in writing, critical media analysis, preparation of communication materials.					
Course Outcomes	<p><b>CO1:</b> Students will be able to communicate ideas effectively using appropriate verbal and written language.</p> <p><b>CO2:</b> Students will understand and apply both formal and informal writing styles suited to different contexts.</p> <p><b>CO3:</b> Students will improve nonverbal cues and apply body language effectively in interpersonal communication.</p> <p><b>CO4:</b> Students will demonstrate the ability to create alternative media materials for clear and impactful communication.</p> <p><b>CO5:</b> Students will acquire proficiency in note taking, summarizing, and writing for academic and professional use.</p>

	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite						

Course Content	<p><b>Unit – 01: Fundamentals of Communication</b> Introduces the basic principles of communication, emphasizing clarity, coherence, and accuracy in both verbal and written forms.</p> <p><b>Unit – 02: Writing Styles and Contexts</b> Explores various formal and informal writing styles. Formal writing will include academic essays, reports, and official correspondence, while informal writing will cover emails, blogs, and creative pieces.</p> <p><b>Unit – 03: Nonverbal Communication and Body Language</b> Role of nonverbal cues such as gestures, posture, facial expressions, and eye contact in interpersonal communication.</p> <p><b>Unit – 04: Media and Communication Tools</b> Trains students in the creation and use of alternative media materials such as posters, infographics, digital presentations, and audio-visual aids.</p> <p><b>Unit–05: Academic and Professional Writing Skills</b> Develops proficiency in note-taking, summarizing, paraphrasing, and structured writing for academic and professional purposes.</p>

## SEMESTER - 2

### Basic Design – II

Course Code																																			
Course Title	<b>Basic Design – II</b>																																		
Marks	100	Credits	4																																
Teaching per Week	06 hours.																																		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)																																		
Effective From	June 2025																																		
Purpose of Course	To develop design skills by introducing and applying the core principles of design and visual communication in architecture. It enables to understand, form, proportion, and composition, fostering creativity for architectural thinking and expression.																																		
Course Objective	<ul style="list-style-type: none"><li>• To introduce students to the principles of design and enhance their understanding of colour theory, textures, materials, and graphic techniques.</li><li>• To build creative thinking, abstract reasoning, and visual communication skills essential for an architectural design.</li></ul>																																		
Course Outcomes	<p><b>CO1:</b> Students will develop drawing skills through sketching, enabling accurate observation and representation of objects.</p> <p><b>CO2:</b> Students will understand colour vocabulary, historical and contemporary significance, and the psychology of colour perception in design.</p> <p><b>CO3:</b> Students will be able to apply colour properties and harmonies in architectural representation.</p> <p><b>CO4:</b> Students will acquire skills in sculpture and three-dimensional form making, by exploring various material.</p>																																		
Mapping between COs with PSOs	<table border="1"><thead><tr><th>COs</th><th>PSO1</th><th>PSO2</th><th>PSO3</th><th>PSO4</th><th>PSO5</th></tr></thead><tbody><tr><td>CO1</td><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td></td></tr><tr><td>CO2</td><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td></td></tr><tr><td>CO3</td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td></td></tr><tr><td>CO4</td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td></tr></tbody></table>	COs	PSO1	PSO2	PSO3	PSO4	PSO5	CO1						CO2						CO3						CO4

CO3																																			
CO4																																			
Prerequisite	Nil																																		
Course Content	<b>Unit 1: Indoor and outdoor sketching</b>																																		

	<p>An immersive experience of live drawing in various contexts to develop a professional level ability to draw existing objects, in pencil and pen/ink.</p> <p><b>Unit 2: Applications of Colour in Architectural Representation</b> Develops an understanding of basic colour properties, harmonies, and their application in design. Students will practice rendering architectural drawings using light, shade, textures, and tonal values to create expressive and realistic representations.</p> <p><b>Unit 3: Sculpture and Form making</b> Focuses on creating sculptures through casting, modelling, additive and subtractive techniques, and fabrication activities.</p> <p><b>Unit 4: Materials exploration for design</b> Students will experiment with a variety of materials such as plaster, wire, clay, wood, paint, board, and paper to explore form, texture, and expression in three-dimensional design.</p>

## Architectural Design Studio II

Course Code						
Course Title	<b>Architectural Design Studio II</b>					
Marks	100	Credits			4	
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop design skills through exploration of form, space, and visual expression, introducing the fundamental elements and principles of design.					
Course Objective	Introduction to the fundamentals of architectural design like, functions and anthropometrics, structure and materials, sensory qualities and developing an understanding of architecture as a process of creating an integrated functional, structural and spatial system.					
Course Outcomes	<p><b>CO1:</b> Students will understand human factors in design, to create spaces that respond to human needs and comfort.</p> <p><b>CO2:</b> Students will be able to apply spatial and form making principles, in conceptual and functional design.</p> <p><b>CO3:</b> Students will analyse and respond site context, functional requirements, and environmental conditions.</p> <p><b>CO4:</b> Students will develop the ability to design small multi-functional spaces, which are well organized, functional, and contextually responsive designs.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite	Nil					
Course Content	<b>Unit 1: Design of Small Uni-Functional Spaces</b>					

	<ul style="list-style-type: none"> <li>This unit focuses on designing small, single/multi, purpose spaces like cafés or display galleries. Students will study case studies, review literature, and use models to analyse and develop functional, well-organized design solutions.</li> </ul> <p><b>Unit 2: Human Factors in Design</b></p> <ul style="list-style-type: none"> <li>Anthropometric studies, human physiology and ergonomics, emphasizing how human dimensions, capabilities, and comfort influence architectural design. In addition, the students will learn the functions and design response to the needs.</li> </ul> <p><b>Unit 3: Site, Function, and Environmental Context</b></p> <ul style="list-style-type: none"> <li>Site context, functional requirements, inter-relationships, and environmental conditions. Students will study how these factors influence the evolution of form based on structural modules and guide decision-making in architectural design.</li> </ul> <p><b>Unit 4: Spatial and Form Principles</b></p> <ul style="list-style-type: none"> <li>Focuses on design aspects such as spatial order, modularity, structural clarity, circulation and expressionism in form. Principles of abstraction, scales, and ordering mechanisms. This unit examines the evolution of form from conceptual and functional perspectives.</li> </ul>

## Building Materials and Construction II

Course Code						
Course Title	<b>Building Materials And Construction - II</b>					
Marks	100	Credits			4	
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To introduce fundamental building materials, structural systems, and construction techniques essential for understanding how buildings are build and function.					
Course Objective	To introduce building materials, soil investigation, foundations, walls, finishes, staircases, and architectural elements, and to apply this knowledge in building design.					
Course Outcomes	<p><b>CO1:</b> To Understand the properties and applications of advance building materials for appropriate use in building construction.</p> <p><b>CO2:</b> To learn the importance of soil investigation and its role in selecting suitable foundation types.</p> <p><b>CO3:</b> Identify and differentiate between various foundations systems, and understand their selection based on site and load conditions.</p> <p><b>CO4:</b> To Gain knowledge of different wall types and finishes.</p> <p><b>CO5:</b> To understand the design and construction of staircases and building elements.</p>

Teaching Methodology	On board tutorials, presentations of fixtures and other products used for services, Observations at execution site visits and related case studies.								
Evaluation Method	50% Internal assessment, 50% External assessment								

## Architectural Graphical Skill - II

Course Code						
Course Title	<b>Architectural Graphical Skill II</b>					
Marks	100	Credits	4			
Teaching per Week	04 hours.					
Minimum weeks per Semester	18 ( Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	TO enable the students to communicate their design ideas by creating accurate and effective architectural drawings clearly and professionally.					
Course Objective	<ul style="list-style-type: none"> <li>• To equip students with the skills and knowledge to prepare 2-D and 3-D architectural drawings accurate and effective manually.</li> <li>• Provide exposure to use computer and various design software to prepare drawings and presentations.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Apply architectural measurement techniques to conduct fieldwork and prepare accurate measured drawings.</p> <p><b>CO2:</b> Develop lateral surfaces of basic and sectioned geometric solids to understand spatial transformations.</p> <p><b>CO3:</b> Construct orthographic projections of interpenetrating solids.</p> <p><b>CO4:</b> Create one-point and two-point perspective drawings to visually communicate three-dimensional.</p> <p><b>CO5:</b> Apply principles of sciagraphy to represent shade and shadows in architectural drawings.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite						

Course Content	<p><b>UNIT 1: Measurement Techniques and Measured Drawings</b></p> <ul style="list-style-type: none"> <li>• Introduction to architectural measurements</li> <li>• Field exercise: Measuring a small built unit (e.g., canteen, kiosk, etc)</li> <li>• Preparation of measured drawings: plan, elevation, section.</li> <li>• Annotating dimensions, materials, and details.</li> </ul> <p><b>UNIT 2: Surface Development of Solids</b></p> <ul style="list-style-type: none"> <li>• Understanding geometric solids: cube, prism, cone, cylinder, pyramid, etc.</li> <li>• Surface development of solids and lateral surfaces</li> <li>• Surface development of solids cut by horizontal, vertical, or inclined planes</li> </ul> <p><b>UNIT 3: Interpenetration of Solids and Orthographic Projections</b></p> <ul style="list-style-type: none"> <li>• Principles of interpenetration and intersection of solids</li> <li>• Drawing intersection curves in orthographic views</li> <li>• Use of top, front, and side views for clarity</li> </ul> <p><b>UNIT 4: Perspective Drawing and sciography</b></p> <ul style="list-style-type: none"> <li>• Introduction to perspective projection: eye level, picture plane, vanishing points, one point, two Point</li> <li>• Basics of sociography (shadows)</li> <li>• Shadow casting methods in plan, elevation, and perspective based on solar angles</li> </ul> <p><b>UNIT 5: Introduction to Computer-Aided Design (CAD)</b></p> <ul style="list-style-type: none"> <li>• Introduction to Revit and Sketch UP software</li> <li>• Understanding the interface, tools, and commands</li> <li>• Creation of 3D architectural drawings: plan, elevation, section</li> <li>• Basic 3D modelling commands and generation of isometric/perspective views</li> <li>• Preparing layout sheets, plotting, and file management</li> </ul>

## Structural Design Systems II

Course Code	--		
Course Title	<b>Structural Design Systems II</b>		
Marks	100	Credits	2
Teaching per Week	02 hours		
Minimum weeks per Semester	18 ( Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To educate students with the principles of Structural Analysis and its application in Architectural studies.		
Course Objective	<ul style="list-style-type: none"> <li>● To enable the student to comprehend the principles and techniques of Structural Analysis and to apply them in Building Systems.</li> <li>● To explain students the fundamentals of Structural Analysis and its applications in Building Materials and their scientific implications.</li> <li>● To empower and assess students on various structural components acquired during the study of structural analysis.</li> </ul>		
Course Objective	<p><b>CO1:</b> A student will develop insight of the fundamental concepts of Structural Analysis in Architectural Education.</p> <p><b>CO2:</b> A student will be trained so that, upon successful completion of the course, they will understand Bending Stress, Shear Stress, Direct and Bending Stress in Beams.</p> <p><b>CO3:</b> A student will enhance their analytical techniques regarding compression elements, specifically the analysis of column areas, thereby advancing their understanding of various vertical structural elements and systems in buildings.</p> <p><b>CO4:</b> A student will comprehend the analysis of beam deflection and will be able to use a suitable structural analysis method to evaluate the behaviour of structural parts.</p> <p><b>CO5:</b> A student will develop knowledge of different types of distribution systems applicable to structural elements and will understand how systems contribute to the overall stability and performance of buildings.</p>		

Mapping between COs with PSOs	<table border="1"> <thead> <tr> <th></th> <th>PSO1</th> <th>PSO2</th> <th>PSO3</th> <th>PSO4</th> <th>PSO5</th> </tr> </thead> <tbody> <tr> <td>CO1</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO2</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO3</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO4</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO5</td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>		PSO1	PSO2	PSO3	PSO4	PSO5	CO1						CO2						CO3						CO4						CO5

Mechanics of Materials	E.P. Popov												
A Textbook of Strength of Materials	R.K. Bansal												
Strength of Materials	R.S. Khumri												
Engineering Mechanics, Statics & Dynamics	Desai & Mistry												
Teaching Methodology	Theory, Tutorial, Presentation and Assignment.												
Evaluation Method	50% Internal assessment, 50% External assessment												

## Humanities - II

Course Code						
Course Title	<b>Humanities - II</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To understand humankind, evolution and formation of societies in terms of needs and aspirations to create human centric design.					
Course Objective	<ul style="list-style-type: none"> <li>• Provide an understanding of human behaviour, societies and cultural influences of individuals and communities.</li> <li>• Explore the interrelationship with psychology, sociology, and culture by analysing human behaviour, social structures, and cultural influences in the context of design.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Demonstrate an understanding of basic psychological concepts and social behaviour as they relate to human perception, user needs.</p> <p><b>CO2:</b> Analyse architectural contributions of early civilizations and evaluate the role of religion and culture in shaping architecture.</p> <p><b>CO3:</b> Identify and interpret major Western art movements from the Renaissance to Modernism, and understand their influence.</p> <p><b>CO4:</b> Evaluate the interrelationship between culture, art, and the built environment, with emphasis on Indian historical contexts.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite						

Course Content

**UNIT 1: Introduction to Psychology and Social Behaviour in the Context of Art and Architecture**

- To introduce students to basic psychological concepts relevant to perception, behaviour, and mental processes.
- To develop an understanding of how societal attitudes influence the creation and appreciation of art and architectural forms.
- To explore foundational theories of social behaviour and their implications in the built environment.

**UNIT 2: Early Civilizations and Architecture**

- Rise and decline of Greek city-states; Roman Republic and Empire
- Chinese and Japanese architectural traditions
- Inca and Aztec built forms and symbolism
- Mauryan architecture and Emperor Ashoka's contributions
- Influence of religion on Buddhist and Hindu sacred architecture.

**UNIT 3: Introduction to Major Art Movements**

- Definition and role of art movements
- Italian High Renaissance: balance, perspective, humanism (da Vinci, Michelangelo)
- Baroque in Spain and Flanders: drama, emotion (Velázquez, Rubens)
- Rococo: elegance, ornamentation
- Impressionism: light, colour, everyday life (Monet, Renoir)
- Cubism: geometric abstraction (Picasso, Braque)
- Modernism: innovation and breaking traditions

**UNIT 4: Interrelationship Between Culture, Art, and the Built Environment (Indian History)**

- Role of culture in shaping architecture and artistic expression
- Architecture as a reflection of societal values, identity, and change
- Influence of art movements on architectural styles and design thinking
- Case studies linking art, psychology, and architecture
- Contemporary relevance: user-centred and culturally sensitive design.

## Communication Skills - II

Course Code						
Course Title	<b>Communication Skills - II</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To enhance students' communication skills using modern communicative methods, preparing them for effective interaction in various professional platforms.					
Course Objective	<ul style="list-style-type: none"> <li>• To develop clear and confident communication skills in students by introducing them to modern and effective methods of expression.</li> <li>• To enable the students to communicate with clients, workers and other stakeholders effectively for the purpose.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will develop an understanding of verbal and non-verbal communication techniques.</p> <p><b>CO2:</b> Students will be able to prepare and deliver effective presentations by organizing content, and employing confident body language.</p> <p><b>CO3:</b> Students will demonstrate the ability to prepare for and participate in interviews, applying both verbal and non-verbal communication strategies.</p> <p><b>CO4:</b> Students will participate actively in-group discussions, understand different roles.</p> <p><b>CO5:</b> Students will improve written and reading communication through grammar proficiency, vocabulary enhancement, and reading comprehension strategies.</p>

## SEMESTER - 3

### Architectural Design Studio III

Course Code			
Course Title	<b>Architectural Design Studio III</b>		
Marks	100	Credits	8
Teaching per Week	10 hours.		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To introduce students to user-specific domestic architecture, focusing on designing spaces that respond to needs and aspirations of household which may lead to design a typical customised house form.		
Course Objective	<ul style="list-style-type: none"><li>• To enable students to understand the needs and aspirations of an individual and the family, and to translate these into functional requirements.</li><li>• To learn the concept formulation, design development and decision making at each stage of the design.</li></ul>		
Course Outcomes	<p><b>CO1:</b> Students will understand the fundamental elements of space-making.</p> <p><b>CO2:</b> Students will learn to prepare programmatic requirements for design purpose.</p> <p><b>CO3:</b> Students will be able to analyze and interpret spatial configurations for design programs, using functional, geometric, and visual principle.</p> <p><b>CO4:</b> Students will demonstrate the ability to formulate design programs by integrating user needs, site context, environmental conditions.</p> <p><b>CO5:</b> Students will acquire skills to design simple residential units, applying lessons from space-making and grouping strategies.</p>

## Building Materials and Construction III

Course Code						
Course Title	<b>Building Materials And Construction - III</b>					
Marks	100	Credits	4			
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop understanding of building construction techniques and materials. It equips students with the practical and theoretical knowledge required to analyse, select, and apply appropriate construction methods in design and execution.					
Course Objective	To understand and apply fundamental principles of building construction. Design and detailing of openings, construction of floors and roofs, and the effective use of construction equipment, thereby developing a practical foundation for architectural design and execution.					
Course Outcomes	<p><b>CO1:</b> Students will understand the structural behaviour and application of RCC.</p> <p><b>CO2:</b> Students will develop the ability to design and detail different types of building openings.</p> <p><b>CO3:</b> Students will learn to analyse and apply appropriate flooring construction techniques, materials, and finishes.</p> <p><b>CO4:</b> Students will compare and interpret different roofing systems, and illustrate their construction methods and suitable roof coverings.</p> <p><b>CO5:</b> Students will gain familiarity with commonly used construction equipments.</p>

### Structural Design Systems III

Course Code			
Course Title	<b>Structural Design Systems III</b>		
Marks	100	Credits	2
Teaching per Week	04 hours.		
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To educate students with the principles of R.C.C. Structural analysis and its application in Architectural studies.		
Course Objective	<ul style="list-style-type: none"><li>• To enable the student to comprehend the principles and techniques of Structural Analysis and to apply them in Building Systems.</li><li>• To empower students with concepts of R.C.C. Structural Engineering &amp; Design and its applications on the Building Material and system.</li><li>• To empower and assess students on various structural components acquired during the study of structural analysis of the R.C.C. Structural Design.</li></ul>		
Course Outcomes	<p><b>CO1:</b> A student will develop insight into the basic fundamental aspects of R.C.C. Structural Design. Upon successful completion of the course, the student will be trained to understand the Introduction to IS Code for Plain &amp; Reinforced Concrete and various methods of R.C.C. Design.</p> <p><b>CO2:</b> A student will gain knowledge of flexural elements such as Beams, Columns, and Footings, including their application, and will be able to analyze and design Singly and Doubly Reinforced Sections, Columns, and Footings using the Limit State Method.</p> <p><b>CO3:</b> A student will understand the analysis and design of Slabs and adopt an appropriate structural analysis technique, as well as comprehend the behavior of structural elements for their design approach.</p> <p><b>CO4:</b> A student will develop analytical and structural designing techniques in the area of load-bearing structures subjected to gravity and seismic loads, thereby advancing their knowledge of different building structural elements and systems.</p>		

	<p><b>CO5:</b> A student will utilize R.C.C. Structural Analysis problem-solving techniques in the analysis and design of building systems, enabling effective application of these methods in real-world architectural and structural scenarios.</p>																																				
Mapping between COs with PSOs	<table border="1"> <thead> <tr> <th></th> <th>PSO1</th> <th>PSO2</th> <th>PSO3</th> <th>PSO4</th> <th>PSO5</th> </tr> </thead> <tbody> <tr> <td>CO1</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td></td> </tr> <tr> <td>CO2</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO3</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> </tr> <tr> <td>CO4</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> </tr> <tr> <td>CO5</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> </tr> </tbody> </table>		PSO1	PSO2	PSO3	PSO4	PSO5	CO1						CO2						CO3						CO4						CO5

## Environmental Science - I

Course Code						
Course Title	<b>Environmental Science - I</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop awareness and understanding of environmental issues, natural resources, ecosystems, and sustainable practices for responsible living and design.					
Course Objective	<ul style="list-style-type: none"> <li>• The course introduces students to environmental studies, focusing on ecosystems, biodiversity, pollution and its control.</li> <li>• To study the interrelationship between society and environment in the present context for environment friendly design.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the nature of environmental studies and analyze the importance of natural resources, both renewable and non-renewable.</p> <p><b>CO2:</b> Students will be able to explain the structure and function of ecosystems and evaluate the role of biodiversity.</p> <p><b>CO3:</b> Students will identify the causes and consequences of environmental pollution and apply knowledge of pollution control methods.</p> <p><b>CO4:</b> Students will examine the interaction between society, population, and the environment, assess related social issues, through sustainable approaches.</p>

## Survey and Levelling

Course Code			
Course Title	<b>Survey and Levelling</b>		
Marks	100	Credits	2
Teaching per Week	02 hours.		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To introduce the fundamental surveying techniques and tools used in architectural site analysis, enabling accurate measurement, mapping, and layout essential for design and construction.		
Course Objective	<ul style="list-style-type: none"> <li>• To familiarize students with basic surveying terms, principles, and instruments used in architectural and site planning.</li> <li>• To enable students to interpret contour maps and calculate areas and volumes relevant to site development.</li> <li>• To train students in practical site layout techniques essential for setting out architectural structures.</li> </ul>		
Course Outcomes	<p><b>CO1:</b> Students will develop an understanding of basic surveying concepts, definitions, and the classification of surveying methods and measurement units.</p> <p><b>CO2:</b> Students will acquire practical skills in chain, compass, and plane table surveying techniques, including fieldwork, data collection, and plotting.</p> <p><b>CO3:</b> Students will learn to calculate areas and levels using trapezoidal and Simpson’s rules and levelling instruments, and interpret contour maps effectively.</p> <p><b>CO4:</b> Students will gain the ability to use Total Station for accurate measurement and understand its working principles in modern surveying practice.</p> <p><b>CO5:</b> Students will demonstrate the ability to set out buildings on-site and interpret basic GIS data for site planning and development applications.</p>

CO3																																					
CO4																																					
CO5																																					
Prerequisite	Familiarity with basic geometry, units of measurement, and technical drawing skills.																																				
Course Content	<p><b>1. Introduction of subject:</b> Basic terms, definition and terminologies. Classification and division of survey, units of measurements.</p> <p><b>2. Chain Surveying:</b> Linear measurement, principle of chain surveying, framework, instruments used, fieldwork.</p> <p><b>3. Compass Survey:</b> Introduction to traversing, principle used, types of meridian, WCB &amp; RB system.</p> <p><b>4. Plane Table Survey :</b> Underlying principle, orientation techniques, Instruments used in plane table surveying, radiation, intersection, and traversing &amp; resection methods, plotting in field.</p> <p><b>5. Methods of Area Measurements:</b> Introduction to various methods of measuring area between chain line &amp; boundary, calculation of area using trapezoidal &amp; Simpson's formula, use of planimeter to calculate area. Other approximate methods.</p> <p><b>6. Introduction to Leveling &amp; Contour:</b> Introduction to leveling &amp; RL, How to get the RL. Understanding of contours, basic characteristics &amp; uses of contour, study of contour map- identification of ridgeline, valley line, etc. Calculation of volume for cutting &amp; filling using contour map.</p> <p><b>7. Introduction to Total station:</b> Introduction to the instrument &amp; working methodology.</p> <p><b>8. Setting out of Building :</b> Setting out of building on the ground- Methods for setting out buildings by horizontal and vertical control.</p> <p><b>9. Introduction to GIS :</b> Introduction to various terminology &amp; reading of map.</p>

## History of Architecture-I

Course Code						
Course Title	<b>History of Architecture-I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To study the evolution of architecture and its relevance to contemporary design.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce students to the historical timeline and key phases of world architecture.</li> <li>• To explore early human settlements and the architectural contributions of major ancient civilizations.</li> <li>• To develop awareness of the significance of heritage conservation in contemporary architectural practice.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the growth of civilizations, cultural elements, societal institutions, and urbanization.</p> <p><b>CO2:</b> Students will analyze the evolution of human and prehistoric settlements.</p> <p><b>CO3:</b> Students will examine river valley civilization and evaluate their contributions to architecture, planning, and cultural identity.</p> <p><b>CO4:</b> Students will interpret the architectural and cultural legacy of Greek and Roman civilizations.</p>

## Building Services-I

Course Code						
Course Title	<b>Building Services-I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To study the fundamental building services into architectural design with a focus on sustainability and efficiency.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce the essential building services such as water supply, drainage, electricity, and lighting.</li> <li>• To develop an understanding of service components-units, design strategies, and integration into architecture.</li> <li>• To promote sustainable practices through water conservation, energy efficiency, and waste management techniques.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand sources, collection methods, treatment processes, and distribution systems of water supply in buildings.</p> <p><b>CO2:</b> Students will analyse and design plumbing networks.</p> <p><b>CO3:</b> Students will identify components and layout of wastewater and storm water systems.</p> <p><b>CO4:</b> Students will gain knowledge of electrical distribution systems and calculate load requirements for buildings.</p> <p><b>CO5:</b> Students will apply principles of lighting design, and integrate daylight and artificial lighting in architectural layouts.</p>

## SEMESTER - 4

### Architectural Design Studio IV

Course Code																																	
Course Title	<b>Architectural Design Studio IV</b>																																
Marks	100	Credits	8																														
Teaching per Week	10 hours.																																
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)																																
Effective From	June 2025																																
Purpose of Course	To learn community living and design responsive built environment; a neighbourhood including common and shared spaces.																																
Course Objective	<ul style="list-style-type: none"><li>• To learn how to develop a cluster of dwelling units with common shared spaces for community.</li><li>• To understand the manifestation of culture and values of the community on group of houses.</li></ul>																																
Course Outcomes	<p><b>CO1:</b> Students will be able to learn about community living and evaluate the role of individual housing unit in a group of houses.</p> <p><b>CO2:</b> Students will be able to design various typologies of housing units as per criteria derived out of different family needs.</p> <p><b>CO3:</b> Students will be able to learn and design common and shared open spaces for a community housing.</p> <p><b>CO4:</b> Students will understand and learn to design different spaces for different age group of individuals as per their needs and aspirations.</p>																																
Mapping between COs with PSOs	<table border="1" style="width: 100%; text-align: center;"><thead><tr><th></th><th>PSO1</th><th>PSO2</th><th>PSO3</th><th>PSO4</th><th>PSO5</th></tr></thead><tbody><tr><th>CO1</th><td style="background-color: #cccccc;"></td><td></td><td></td><td style="background-color: #cccccc;"></td><td></td></tr><tr><th>CO2</th><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td></td></tr><tr><th>CO3</th><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td><td style="background-color: #cccccc;"></td></tr><tr><th>CO5</th><td style="background-color: #cccccc;"></td><td></td><td style="background-color: #cccccc;"></td><td></td><td></td></tr></tbody></table>				PSO1	PSO2	PSO3	PSO4	PSO5	CO1						CO2						CO3						CO5					
	PSO1	PSO2	PSO3	PSO4	PSO5																												
CO1																																	
CO2																																	
CO3																																	
CO5																																	
Prerequisite																																	
Course Content	<b>Unit 1: Understanding community housing</b> 1.1. Introduction to community living 1.1.1. Role of Common spaces																																

1.1.2. Role of Common infrastructure and services in a community housing

1.2. Introduction to classic case studies of community housing

1.3. Explain various typologies of community housing

1.4. Important terminologies in community housing

1.4.1. Housing Cluster

1.4.2. Housing typology

1.4.3. Layout and plotting

1.4.4. Gathering and congregation spaces

1.4.5. Vehicular and pedestrian segregation

1.4.6. Street layout

### **Unit 2: Preparation of design brief**

2.1. Introduction to a live community

2.2. Interaction with identified community

2.3. Deriving housing typologies for identified clients

### **Unit 3: Program formulation and site identification**

3.1. Prepare an architectural program based on community interaction

3.2. Identification of site based on program

3.2.1. live site visits and on site observation

3.2.2. Preparation of Site drawings and site model

3.2.3. Site analysis and identification of site concerns and constrains

### **Unit 4: Conceptual and deign development**

4.1. Derive conceptual ideas and different alternatives for housing layout

4.1.1. Concerns for conceptualisation

4.1.2. Comparative studies between various conceptual ideas

4.1.3. Finalisation of concept for housing layout and housing units

4.1.4. Layout level model making

4.1.5. Cluster level model making

4.2. Design development based on final concept

4.2.1. Cluster level detailing

4.2.2. Detailing community and gathering spaces

4.2.3. Unit level detailing

4.2.4. detailed model making of site with units and gathering spaces

### **Unit 5: Preparation of final Design and presentation**

5.1. Analyse design development stage and suggest necessary modification

	<p>5.2. Preparation of final design and details</p> <p>5.3. Detailing of clusters, streets, and various housing types with specification of material and construction techniques</p> <p>5.4. Detailing of landscape (demarcation of softscape and hard paved areas)</p> <p>5.5. Details of common services like water supply, drainage, and storm network electricity, common toilets, etc, common amenities.</p> <p>5.6. Preparation final drawings and models with presentation.</p>

## Building Materials and Construction IV

Course Code						
Course Title	<b>Building Materials And Construction - IV</b>					
Marks	100	Credits	4			
Teaching per Week	04 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop understanding of steel and temporary construction systems, their applications, and detailing for integration into architectural design.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce students to the materials, techniques, and applications of steel construction and temporary structures.</li> <li>• To develop understanding of construction methods through observation, documentation, and technical detailing.</li> <li>• To familiarize students with modern construction process, techniques and equipments used in building construction.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the physical and structural behavior of steel and its application in various building systems.</p> <p><b>CO2:</b> Students will be able to analyze and detail the construction process and stages of retaining walls.</p> <p><b>CO3:</b> Students will gain knowledge of temporary structures such as shoring, scaffolding, shuttering, and underpinning, including their applications and selection criteria.</p> <p><b>CO4:</b> Students will develop the ability to document and interpret steel construction methods through case studies of buildings.</p> <p><b>CO5:</b> Students will identify and understand the operation and selection of construction equipment used in steel construction.</p>

Evaluation Method	50% Internal Examination, 50% External Examination.								

## Structural Design Systems IV

Course Code			
Course Title	<b>Structural Design Systems IV</b>		
Marks	100	Credits	2
Teaching per Week	04 hours.		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To educate students with the principles of Steel Structural Analysis and its application in Architectural studies.		
Course Objective	<ul style="list-style-type: none"> <li>• To enable the student to comprehend the principles and techniques of different Structural Systems and to make the student capable of understanding the concepts and methods of Structural Analysis &amp; Design and learn their implementation in Knowledge -Based Systems.</li> <li>• To empower students with concepts of Steel Structural Engineering &amp; Design and its applications on the Building Material and system.</li> <li>• To empower and assess students on various structural components acquired during the study of structural analysis of various parts of different steel structural design &amp; systems.</li> </ul>		
Course Outcomes	<p><b>CO1:</b> A student will develop insight into the basic fundamental aspects of Steel Structural Design and will gain knowledge of the Introduction to the IS Code for Steel Structures, as well as various methods of Steel Design.</p> <p><b>CO2:</b> A student will understand roofing elements such as the Simple Roof Truss and their applications, and will be able to analyze and design a Simple Roof Truss using the Limit State Method.</p> <p><b>CO3:</b> A student will understand the analysis of members subjected to axial tensile loads, transverse loads, and axial compressive loads, and adopt appropriate structural analysis techniques to evaluate the behavior of structural elements as part of the design approach.</p> <p><b>CO4:</b> A student will develop analytical and structural design techniques for the design of footings, thereby advancing their knowledge of different building structural elements and systems.</p>		

	<b>CO5:</b> A student will utilize Steel Structural Analysis problem-solving techniques in the analysis and design of building systems.					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite	Knowledge of basic fundamentals of Structural Mechanics and Analysis.					
Course Content	<p><b>Unit 1:</b>  <b>1.1 Introduction to IS code :</b></p> <p>1.1.1 Introduction to IS code: Introduction to IS -800 for steel structure.  1.1.2 Rolled Steel sections: Study of IS Rolled steel sections &amp; steel table.</p> <p><b>Unit 2:</b>  <b>2.1 Design of Roof Truss</b></p> <p>2.1.1 Design of a simple roof truss: Steel trusses, its types, geometry, spans, pitches, spacing etc. Various loads on a roof truss. i.e. Dead, Imposed &amp; Live Load. Analysis &amp; Calculation of Dead load, Live load &amp; Wind Load. Analysis of a truss under various loads and Design of a truss member.</p> <p><b>Unit 3:</b>  <b>3.1 Members subjected to Axial Tensile and Transverse Load:</b></p> <p>3.1.1. Analysis and Design of a regular &amp; built up steel sections subjected to an axial Tensile load.  3.1.2. Analysis and Design of steel regular &amp; built up sections subjected to bending i.e. beams including analysis and checks for deflection and shear.</p> <p><b>Unit 4:</b>  <b>4.1 Members subjected to Axial Compressive Load:</b></p> <p>4.1.1. Analysis and Design of a regular &amp; built up steel section subjected to an Axial Compressive Load.</p>					

	<p><b>Unit 5:</b></p> <p><b>5.1 Design of Footing:</b></p> <p>5.1.1. Analysis &amp; Design &amp; detailing of slab based footing. Study of behaviour &amp; detailing of Gusseted based footings.</p>

## Environmental Science - II

Course Code						
Course Title	<b>Environmental Science - II</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop awareness and understanding of environmental issues, natural resources, ecosystems, and sustainable practices for responsible living and design.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce the fundamental principles of climate and its influence on building design and performance.</li> <li>• To enable students to apply solar control and daylighting strategies using climate analysis tools and techniques.</li> <li>• To promote climate-responsive architecture by integrating passive strategies and relevant building regulations.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the fundamental climatic elements, types, and their influence on architectural design.</p> <p><b>CO2:</b> Students will be able to analyze climate data using tools and software for informed site and design decisions.</p> <p><b>CO3:</b> Students will apply principles of solar geometry to develop effective shading strategies for buildings.</p> <p><b>CO4:</b> Students will demonstrate the ability to design spaces that optimize natural daylight through appropriate daylighting techniques.</p> <p><b>CO5:</b> Students will integrate climate-responsive and bioclimatic strategies into architectural design in accordance with relevant building byelaws.</p>

## Computer Application-I

Course Code						
Course Title	<b>Computer Application-I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	Introduce students to essential digital tools and software applications used in architectural practice, enabling them to effectively create, edit, and present architectural documents.					
Course Objective	To equip students with advanced digital skills for architectural design, documentation, and presentation. The focus is on integrating technology into design workflows for efficiency, sustainability, and high-quality presentation.					
Course Outcomes	<p><b>CO1:</b> Students will Apply parametric and generative design principles using Rhino, Grasshopper, and AI plugins.</p> <p><b>CO2:</b> Students will Develop BIM models in Revit and integrate AI tools for performance and sustainability analysis.</p> <p><b>CO3:</b> Students will Produce accurate construction documentation and optimized design outputs using digital platforms.</p> <p><b>CO4:</b> Students will Create professional-quality architectural presentations and portfolios using Photoshop.</p>

## History of Architecture-II

Course Code						
Course Title	<b>History of Architecture-II</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To study the development of architecture focusing on Indian temple and Western medieval architecture.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce students to the evolution and significance of Indian architecture focusing on temple.</li> <li>• To get exposure and study evolution of western architecture till Renaissance era.</li> <li>• To enable students to analyze heritage through systematic study and interpretation to find its relevance.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will be able to explain the evolution, significance, and spatial principles of Indian temple architecture and its cultural symbolism.</p> <p><b>CO2:</b> Students will analyze and differentiate between architectural styles such as Nagara, Dravidian, Vesara, Jain, and Palace architecture.</p> <p><b>CO3:</b> Students will interpret the structural systems, features, and symbolic meanings of Byzantine, Romanesque, and Gothic architecture of the Middle Ages.</p> <p><b>CO4:</b> Students will develop comparative insights into Indian and Western architecture, demonstrating an understanding of their historical, cultural, and design relevance.</p>

## SEMESTER - 5

### Architectural Design Studio V

Course Code			
Course Title	<b>Architectural Design Studio V</b>		
Marks	100	Credits	8
Teaching per Week	12 hours.		
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	Learn to design institutional spaces that foster interaction, and community, integrating functional needs, environmental responsiveness, and contextual relevance.		
Course Objective	<ul style="list-style-type: none"><li>• To learn principles of various institutional designing and develop indigeneous architectural language.</li><li>• To understand the spatial and functional requirements of institutional buildings and their role in supporting function, interaction, and community.</li><li>• To explore the interrelationship between built form, site context, and institutional identity in developing contextually responsive architectural designs.</li></ul>		
Course Outcomes	<p><b>CO1.</b> Students will be able to understand and interpret institutional characteristics, functions, and their influence on spatial planning and composition.</p> <p><b>CO2.</b> Students will demonstrate the ability to design buildings in response to contextual parameters.</p> <p><b>CO3.</b> Students will develop skills to integrate spatial hierarchy, functional zoning, and circulation logic.</p> <p><b>CO4.</b> Students will be capable of applying appropriate structural systems, building technologies, and services for efficient institutional design.</p> <p><b>CO5.</b> Students will understand and implement development control regulations and enhance design proposals through literature review and case studies.</p>

## Building Construction and Services

Course Code						
Course Title	<b>Building Construction and Services</b>					
Marks	100	Credits	4			
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To enhance the ability to integrate the construction techniques and services into architectural design adhering to safety regulations and functional efficiency.					
Course Objective	<ul style="list-style-type: none"> <li>• To understand the principles, components, and construction techniques of advanced building systems.</li> <li>• To develop the ability to integrate functional, safety, and technological systems into architectural design.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the components, materials, and techniques of precast and prestressed concrete construction.</p> <p><b>CO2:</b> Students will understand principles of fire safety, evaluate fire behavior of building materials, and apply appropriate fire safety systems in accordance with regulations and codes.</p> <p><b>CO3:</b> Students will understand the principles and types of vertical and horizontal mobility systems including lifts, escalators, and travolators.</p> <p><b>CO4:</b> Students will develop spatial planning and design strategies for the integration of modern building mobility systems and fire safety infrastructure.</p>

## Structural Design Systems V

Course Code			
Course Title	<b>Structural Design Systems V</b>		
Marks	100	Credits	2
Teaching per Week	02 hours.		
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To educate students with the principles of Advanced Structural Analysis and its application in Architectural studies.		
Course Objective	<ul style="list-style-type: none"> <li>● To make the student capable of understanding the concepts and methods of Advanced Structural Analysis &amp; Design and learn their implementation in Knowledge -Based Systems.</li> <li>● To educate students with concepts of R.C.C. and Steel Structural Engineering &amp; Design and its applications on the Building Material and system.</li> <li>● To empower and assess students on various structural components acquired during the study of structural analysis of various parts of different steel and RCC structural design &amp; systems.</li> </ul>		
Course Outcomes	<p><b>CO1:</b> A student will develop insight into the basic fundamental aspects of Steel Structural Design for Architecture Education and will also gain knowledge of the behavioral study of typical structures, including both R.C.C. and Steel Structures.</p> <p><b>CO2:</b> A student will understand R.C.C. compression and tensile elements such as R.C.C. water tanks, and analyze design of RCC columns, RCC footings, and different types of water tank sections using the Limit State Method.</p> <p><b>CO3:</b> A student will understand the analysis of members subjected to connections in steel structures, as well as Plate Girders and Castellated Girders, and will adopt appropriate structural analysis techniques to evaluate the behavior of these elements as part of the design approach.</p> <p><b>CO4:</b> A student will develop analytical and structural design techniques for tall structures, thereby advancing their knowledge of different building structural elements and systems.</p> <p><b>CO5:</b> A student will utilize tensile structural analysis problem-solving techniques in the analysis and design of building systems,</p>		

	enabling effective application of these methods to real-world architectural and structural challenges.					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite	Knowledge of basic fundamentals of R.C.C. & Steel Structural Design.					
Course Content	<p><b>Unit 1: RCC Water Tank :</b></p> <ul style="list-style-type: none"> <li>Types of water tank, Various types of joints in water tank, Behaviour &amp; reinforcement detailing for On ground water tank-circular &amp; Rectangular, Overhead water tank- Intze tank, Underground water tanks.</li> </ul> <p><b>Unit 2: Plate Girder &amp; Castellated Girder</b></p> <ul style="list-style-type: none"> <li>Introduction to plate girder behaviour &amp; Application. Types of stiffeners, Welded &amp; riveted girders. Introduction to castellated girder behaviour &amp; Application.</li> </ul> <p><b>Unit 3: Connections in steel structure:</b></p> <ul style="list-style-type: none"> <li>Types of connections - Riveted, Welded &amp; bolted connections. Connection details for axial members i.e. members of a truss.</li> <li>Connection for Beam to Beam connection and Beam to Column connection. Framed connection and Seated connection.</li> </ul> <p><b>Unit 4: Tall Structure :</b></p> <ul style="list-style-type: none"> <li>Introduction of Tall structures, Effect of gravity &amp; lateral load. Introduction to various Lateral load resisting systems due to wind &amp; earthquake for tall buildings - Truss, frame, shear wall, core &amp; outrigger, Tube, tube in tube, Bundled tube, Belt truss, Staggered truss system etc, Material, connection, Foundation system. Case studies of world's famous tall buildings.</li> </ul> <p><b>Unit 5: Tensile structure:</b></p> <ul style="list-style-type: none"> <li>Introduction to Tensile structure, spanning, application, classification, material, stability against wind, various types of tensile</li> <li>Structure- cable stayed, suspension cable, cable nets, membrane, Details of Connection for tensile structure, construction technique.</li> </ul>

## Behaviour Science

Course Code						
Course Title	<b>Behaviour Science</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To understand how culture and society influence thoughts and behaviors.					
Course Objective	<ul style="list-style-type: none"> <li>• To learn about the emotion of space, or how buildings "feel" to observers. They will use that knowledge to create their own virtual space.</li> <li>• To introduce fundamental concepts of social and cultural psychology, emphasizing their relevance to understanding human behavior.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will discover and identify facts about the emergent field of architectural psychology.</p> <p><b>CO2:</b> Students will be able to learn how architect affect our psyche.</p> <p><b>CO3:</b> Students will incorporate their discoveries to utilize color symbolism in psychology with architect.</p> <p><b>CO4:</b> Students will be able to understand the relationship between human and built environment.</p> <p><b>CO5:</b> Students will apply cross-cultural perspectives to understand diversity in social behavior and communication.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite						

Course Content

**Unit 1: Introduction to Architectural Psychology**

- What is the psychology of architecture?
- History of architecture psychology.
- Why it is needed?
- How architecture shapes us ?
- What's working behind the scenes - Lights, color, layout & flow, scale, sound.

**Unit 2: Influence of architecture on our psyche**

- How design influences mood?
- Bright space
- Cluttered layouts
- Low Ceilings
- Narrow hallways
- Overly echoey rooms
- Doorways
- Benches

Healing through design/designing restorative architect

- Natural light
- Silence zones
- Soft materials and curves
- Biophilic elements (space that feel alive)
- Key sensory elements in architect

Case study: the role of natural light

**Unit 3: Psychology and colors. "color talks to your brain"**

What is color psychology?

- Definition and color symbolism
- How colors feel in a space?
- Key aspects of Jung's work on color psychology

The power of texture and material

- Texture matters
- Material to mood

The Psychology of different architectural styles

- Classical architecture
- Modern architecture
- Postmodern architecture
- Urban design and mental health
- Smart buildings and mental comfort
- Sustainable = Healthy
- Designing for workplace well being
- How to design with psychology in mind

**Unit 4: Explores the relationship between human experience and built environment**

- Key areas of focus in architectural psychology
- Environmental perception
- Emotional responses to environments

	<ul style="list-style-type: none"> <li>• Behavioral impact</li> <li>• Cognitive processes</li> <li>• Human-environment interaction</li> <li>• Concepts and theories</li> <li>• Behavioral setting</li> <li>• Territoriality</li> <li>• Privacy</li> <li>• Crowding</li> <li>• Restorative environments</li> <li>• Applications</li> <li>• Design of buildings and spaces</li> <li>• Urban planning</li> <li>• Healthcare</li> <li>• Education</li> <li>• Workplace design</li> <li>• Benefits of architectural psychology</li> <li>• Improved well being</li> <li>• Enhanced performance</li> <li>• Increased satisfaction</li> <li>• Stronger communities</li> <li>• Sustainable design</li> </ul>

## Estimation & Costing

Course Code						
Course Title	<b>Estimation &amp; Costing</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To enable assessment of quantities, costs, and quality parameters essential for effective project planning and execution.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce the principles and significance of estimation and specification in construction and architectural practice.</li> <li>• To understand the types, methods, and applications of estimation in different project stages.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the purpose and practical significance of estimation in the construction process.</p> <p><b>CO2:</b> Students will be able to identify and apply various types of estimation methods, including approximate and detailed estimates.</p> <p><b>CO3:</b> Students will gain the ability to calculate material and work quantities using standard methods and measurement techniques.</p> <p><b>CO4:</b> Students will understand different types of specifications and their role in defining material quality, workmanship, and project requirements.</p> <p><b>CO5:</b> Students will be able to interpret and apply specifications in contract documents and ensure compliance during execution stages.</p>

## History of Architecture-III

Course Code						
Course Title	<b>History of Architecture-III</b>					
Marks	100		Credits		2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop an overall understanding of historical architectural styles and their influence on contemporary design thinking and practice.					
Course Objective	<ul style="list-style-type: none"> <li>• To understand the significant architectural styles of the Renaissance upto pre-modernism.</li> <li>• To introduce students to the evolution and significance of Indo-Islamic architecture.</li> <li>• To understand the evolution of architectural elements across different eras and cultures.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will be able to explain the evolution, characteristics, and key architects of Renaissance architecture.</p> <p><b>CO2:</b> Students will analyze English Renaissance and Baroque architecture, identifying stylistic features, design principles, and notable works.</p> <p><b>CO3:</b> Students will understand the development of Indo-Islamic architecture, including the Delhi Sultanate and Mughal periods, and evaluate their spatial, structural, and decorative elements.</p> <p><b>CO4:</b> Students will develop the ability to compare architectural styles across periods, create visual representations, and critically interpret historical buildings in a cultural context.</p>

## Theory of Design

Course Code						
Course Title	<b>Theory of Design</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To explore the architectural theory and criticism to shape design thinking and help in developing a personal and informed design approach.					
Course Objective	<ul style="list-style-type: none"> <li>• To focus on developing critical thinking, analytical reading, and writing skills to evaluate architectural ideas and practices.</li> <li>• To introduce the key architectural theories and influential thinkers of the 20th and 21st centuries.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will be able to understand and explain major theoretical frameworks influencing 20th and 21st century architecture.</p> <p><b>CO2:</b> Students will develop critical reading and writing skills to evaluate architectural texts and discourses.</p> <p><b>CO3:</b> Students will analyze built forms through theoretical lenses and assess their relevance in practice.</p> <p><b>CO4:</b> Students will recognize the contributions of key architects and theorists in shaping contemporary architecture.</p> <p><b>CO5:</b> Students will begin to formulate a personal design philosophy informed by theoretical and critical perspectives.</p>

## SEMESTER - 6

### Architectural Design Studio VI

Course Code																																			
Course Title	<b>Architectural Design Studio VI</b>																																		
Marks	100	Credits	8																																
Teaching per Week	12 hours.																																		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)																																		
Effective From	June 2025																																		
Purpose of Course	To equip students with the skills to prepare accurate working drawings, architectural details, and specifications, integrating building components and services for execution.																																		
Course Objective	<ul style="list-style-type: none"><li>• To enable students to translate design concepts into detailed drawings useful for execution.</li><li>• To develop specifications in terms of materials, construction methods, and service integration.</li></ul>																																		
Course Outcomes	<p><b>CO1:</b> Students will develop comprehensive working drawings for construction and execution of architectural projects.</p> <p><b>CO2:</b> Students will detail building components accurately, considering their function, assembly, and integration.</p> <p><b>CO3:</b> Students will integrate building services such as electrical, plumbing, and drainage into architectural design.</p> <p><b>CO4:</b> Students will select appropriate materials and prepare specifications to ensure clarity and constructability in drawings.</p>

## Advanced Building Construction

Course Code						
Course Title	<b>Advanced Building Construction</b>					
Marks	100	Credits	4			
Teaching per Week	06 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To introduce advanced construction systems and materials, and how natural forces and modern technologies influence building design.					
Course Objective	<ul style="list-style-type: none"> <li>• To develop an understanding of large-span and hi-tech construction systems in modern architecture</li> <li>• To analyze the impact of natural forces on built forms and explore responsive construction techniques.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Understand the principles and applications of large-span structural systems such as space frames, tensile, shell, and modular units.</p> <p><b>CO2:</b> Analyze the impact of natural forces on built forms and apply suitable construction techniques for disaster-resilient architecture.</p> <p><b>CO3:</b> Evaluate hi-tech construction systems and structural innovations including cable-stressed structures, skyscrapers, and suspension bridges.</p> <p><b>CO4:</b> Apply knowledge of innovative materials and emerging technologies to contemporary architectural design and construction practices.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite						

## Course Content

### **Unit 1: Large Span Structures**

- Introduction and architectural significance of large-span structures.
- Modular Unit Systems: concepts, advantages, and applications in flexible construction.
- Space Frame Systems: components, structural behavior, efficiency, and applications in large halls and stadiums.
- Tensile Structures: materials, principles, form-finding methods, and case studies.
- Shell Structures: forms, materials, structural behavior, and notable architectural examples.

### **Unit 2: Natural Forces and Their Impact on Built Form**

- Understanding natural forces and their influence on architectural design.
- Wind: aerodynamic form, wind loads, bracing, and resistance techniques.
- Fire: fire behavior of materials and fire-resistant construction methods.
- Flood: site planning, elevated design strategies, and resistant materials.
- Earthquake: seismic zoning, base isolation, ductile detailing, and earthquake-resistant construction systems.

### **Unit 3: Hi-Tech Construction Systems**

- Introduction to advanced construction innovations and futuristic technologies.
- Cable-Stressed Structures: concept, pretensioned and post-tensioned systems, and applications.
- Turning Torso Design Systems: structural challenges, torsion resistance, and case studies.
- Skyscrapers: structural systems, wind bracing, core design, and high-performance materials.
- Suspension Bridges: design principles, load transfer mechanisms, components, and case studies.

### **Unit 4: Emerging Materials and Technologies**

- Innovative construction materials for large-span and high-performance structures.
- Smart and responsive materials (self-healing concrete, ETFE, smart glass).
- 3D Printing in construction: processes, case studies, and future scope.
- Prefabrication and modular hi-tech systems for speed, efficiency, and sustainability.
- Integration of advanced technologies in contemporary architectural practice.

Building Construction	B.C. Punmia								
Building Construction (Vol-I-IV)	W.B. McKay								
Building Construction	S.C. Rangwala								
Teaching Methodology	On board tutorials, presentations of fixtures and other products used for services, Observations at execution site visits and related case studies.								
Evaluation Method	50% Internal assessment, 50% External assessment								

## Project Management

Course Code						
Course Title	<b>Project Management</b>					
Marks	100	Credits			2	
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To introduce principles of construction and office management, project planning and scheduling, legal and labor welfare aspects, and the fundamentals of building economics.					
Course Objective	<ul style="list-style-type: none"> <li>• To develop understanding of construction planning, site management, legal frameworks, and economic principles.</li> <li>• To define management tools and methods for efficient building project execution and decision-making using various management softwares.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the fundamentals of construction management, including planning, programming, and organizational structures.</p> <p><b>CO2:</b> Students will apply site and office management techniques to effectively handle project execution and decision-making.</p> <p><b>CO3:</b> Students will analyze work planning strategies and project management tools (CPM, PERT, bar charts, software) to monitor and control construction activities.</p> <p><b>CO4:</b> Students will evaluate construction industry laws and building economics to ensure legal compliance and informed decision-making in professional practice.</p>

## Professional Practice - I

Course Code						
Course Title	<b>Professional Practice - I</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop an understanding of professional roles, responsibilities, and ethical standards in architectural practice.					
Course Objective	<ul style="list-style-type: none"> <li>• To familiarize students with office organization, coordination with inter-professionals, authorities and professional organizations.</li> <li>• To equip students with professional knowledge and skills required for architectural practice, professional roles, ethics and legal frameworks in real-world scenarios.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Demonstrate an understanding of professional skills, roles, responsibilities, and prevailing patterns of professional practice.</p> <p><b>CO2:</b> Analyze interrelationships among professionals, associations, and registering bodies while applying principles of professional ethics and fee structures.</p> <p><b>CO3:</b> Apply knowledge of professional competitions, office organization, and management practices in handling architectural projects.</p> <p><b>CO4:</b> Evaluate and manage contractual practices, site responsibilities, and stakeholder roles in the execution of projects.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>

Teaching Methodology	Assignments, Group Discussion.	
Evaluation Method	50% Internal assessment, 50% External assessment	

## Building Bye-Laws

Course Code						
Course Title	<b>Building Bye-Laws</b>					
Marks	100	Credits			4	
Teaching per Week	04 hours.					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To provide understanding of building bylaws, regulations, and development control rules, enabling them to apply these legal frameworks in architectural practice.					
Course Objective	<ul style="list-style-type: none"> <li>• To provide exposure to legal framework related to physical development prevailing from constitution to local level.</li> <li>• To develop comprehensive understanding of development control regulations in the context of Gujarat.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will learn zoning concepts and assess their impact on residential, institutional, industrial, agricultural, and entertainment developments.</p> <p><b>CO2:</b> Students will Interpret and compare bye-laws applicable to cities, towns, and villages with respect to their implementation.</p> <p><b>CO3:</b> Students will analyze the evolution of building regulations through key legislation.</p> <p><b>CO4:</b> Evaluate the purpose and necessity of bye-laws in ensuring safety, functionality, and aesthetics within the built environment.</p>					
Mapping between COs with PSOs		<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite						

Course Content	<p><b>Unit 1: Introduction to Zoning and Land Use</b></p> <ul style="list-style-type: none"> <li>• Zoning of areas: residential, institutional, industrial, agricultural, entertainment, etc.</li> <li>• Importance and implications of zoning regulations in urban development.</li> </ul> <p><b>Unit 2: City, Town, and Village Bye-laws</b></p> <ul style="list-style-type: none"> <li>• Introduction to bye-laws for different settlement types: city, town, and village.</li> <li>• Distinctive features and implementation mechanisms.</li> </ul> <p><b>Unit 3: Evolution of Building Regulations</b></p> <ul style="list-style-type: none"> <li>• Historical overview of GDCR.</li> <li>• Key legislations: <ul style="list-style-type: none"> <li>○ Mumbai Municipal Act</li> <li>○ Town Planning Act</li> <li>○ General Development Control Regulations (GDCR)</li> </ul> </li> </ul> <p><b>Unit 4: Purpose and Necessity of Bye-laws</b></p> <ul style="list-style-type: none"> <li>• Understanding the need for bye-laws in urban governance.</li> <li>• Role in ensuring safety, functionality, and aesthetics in built environments.</li> </ul>

## History of Architecture-IV

Course Code						
Course Title	<b>History of Architecture-IV</b>					
Marks	100	Credits	2			
Teaching per Week	02 hours.					
Minimum weeks per Semester	18 (Including Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop understanding of the evolution, and contextual relevance of Colonial and Modern architecture in India and globally.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce students to the principles and evolution of colonial architecture, highlighting their socio-cultural, technological, and structural influences.</li> <li>• To study the principles of modern architecture globally with reference to master architect.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Explain the evolution of colonial architecture in India, including its urban and institutional expressions.</p> <p><b>CO2:</b> Analyze the foundations of Modernist architecture by evaluating the role of materials, technologies, and structural innovations.</p> <p><b>CO3:</b> Interpret the works and philosophies of master architects.</p> <p><b>CO4:</b> Assess contemporary architectural approaches in India, focusing on climate-responsive design, modernist practices, and the contributions of women architects.</p>

## SEMESTER - 7

### Practical Training

Course Code						
Course Title	<b>Practical Training</b>					
Marks	100	Credits			24	
Teaching per Week	- NA -					
Minimum weeks per Semester	18 (Practical Training, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To provide practical experience through supervised internship under the registered architect, build professional skills, and get prepared for industry.					
Course Objective	<ul style="list-style-type: none"><li>• To provide practical experience in an architectural firm to design and execute building projects.</li><li>• To learn project management, teamwork, and professional skills, along through critical observation and prepare reports and a final portfolio.</li></ul>					
Course Outcomes	<p><b>CO1:</b> Students will apply design and detailing skills by engaging in collaborative discussions with clients, consultants, and project teams.</p> <p><b>CO2:</b> Students will prepare professional drawings, specifications, tenders, and estimations to support project execution and documentation.</p> <p><b>CO3:</b> Students will able to demonstrate digital proficiency in compiling, managing, and presenting architectural information for office and project use.</p> <p><b>CO4:</b> Students will analyse on-site construction processes through observation, coordination, and supervision to bridge design and execution.</p>

## SEMESTER - 8

### Architectural Design Studio - VIII

Course Code			
Course Title	<b>Architectural Design Studio - VIII</b>		
Marks	100	Credits	10
Teaching per Week	14 hr		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To develop understanding of urban housing challenges across socio-economic groups and offer strategic solutions for effective housing projects.		
Course Objective	<ul style="list-style-type: none"><li>• To understand the complex socio-economic needs of society influencing urban housing and analyse related issues such as land scarcity and housing typologies.</li><li>• To explore and evaluate recent trends of development, and future directions through design-based investigations.</li><li>• To develop the ability to design sustainable, resilient, and environmentally responsive housing solutions that address contemporary urban challenges.</li></ul>		
Course Outcomes	<p><b>CO1:</b> Students will understand national and global housing policies, standards, and regulations, and their role in addressing housing challenges across income groups.</p> <p><b>CO2:</b> Students will analyse housing typologies, planning principles, and issues such as shortages, finance, and slum development in urban and rural contexts.</p> <p><b>CO3:</b> Students will able to apply housing design methodologies through case studies and develop urban housing schemes integrating infrastructure, services, and community needs.</p> <p><b>CO4:</b> Students will able to evaluate and incorporate modern construction techniques, disaster-resistant methods, and sustainable practices for innovative and resilient housing solutions.</p>

## Hi-Tech Structures and Performance Analysis

Course Code						
Course Title	<b>Hi-Tech Structures and Performance Analysis</b>					
Marks	100	Credits		4		
Teaching per Week	4 hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To equip students with practical skills in building performance simulation, focusing on energy efficiency, daylighting, and thermal comfort using advanced digital tools.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce the fundamentals of building performance simulation, enabling them to analyse energy, daylight, and thermal comfort using digital tools.</li> <li>• To explore the impact of innovative materials, structural systems, and digital technologies on overall building efficiency and sustainability.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand building performance techniques for analysing energy use, daylighting, and thermal comfort.</p> <p><b>CO2:</b> Students will ensure design compliance with sustainability standards such as ASHRAE, IGBC, and ECBC.</p> <p><b>CO3:</b> Students will evaluate advanced materials, construction methods, and structural systems to enhance building performance.</p> <p><b>CO4:</b> Students will use digital tools, to conduct integrated environmental and systems performance analysis.</p> <p><b>CO5:</b> Students will assess and optimize building designs by integrating traditional principles with modern computational methods for sustainable outcomes.</p>

Prerequisite	Nil					

## Course Content

### **Unit 1: Introduction to High-Performance Building Systems**

- Overview of integrated building systems (site, climate, structure, skin, services, space, finishes)
- Principles of designing high-performance buildings through system interconnectivity
- Key concepts in sustainable and innovative building design

### **Unit 2: Sky scrapers and smart and intelligent buildings**

- **Skyscrapers:** Tall, multi-storey buildings designed for commercial, residential, or mixed use, optimized for vertical space in dense urban areas.
- **Structural & Design Features:** Steel or reinforced concrete frameworks, wind and seismic resistance systems, high-speed elevators, and efficient space utilization.
- **Smart/Intelligent Buildings:** Buildings with integrated automation systems for lighting, HVAC, security, and energy management to enhance efficiency and comfort.
- **Benefits:** Skyscrapers maximize land use and create iconic skylines; smart buildings reduce energy consumption, improve occupant comfort, and enable real-time monitoring.

### **Unit 3: Special Structures and Digital Analysis**

- Structural analysis of complex forms using digital tools
- Case studies of innovative large-scale structures
- Use of advanced digital tools for complex form generation and analysis
- Computational design methods and parametric modeling
- Structural and performance simulation software
- Optimization techniques for complex structures

### **Unit 4: Hi-Tech Roofing, Facades, and Smart Materials**

- Tensile and membrane roofing systems
- Metal lattice and hyperbolic roof structures
- Retractable and dynamic roof systems
- Kinetic facades and adaptive building skins
- Smart and responsive materials:
  - Thermal expansion materials
  - Shape memory alloys
  - Phase-change materials
- Applications of smart materials in adaptive facades and structural elements
- Innovations in responsive architecture

### **Unit 5: Integrated Design and Performance Optimization**

- Integrating structural, façade, and building services systems
- Design strategies for maximizing performance, sustainability, and aesthetics
- Case studies demonstrating effective system integration.

## Site Planning & Landscape

Course Code						
Course Title	<b>Site Planning &amp; Landscape</b>					
Marks	100	Credits			2	
Teaching per Week	4hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To equip students with foundational knowledge and practical skills in site planning and landscape design.					
Course Objective	<ul style="list-style-type: none"> <li>• To introduce the principles and techniques of site planning and landscape design.</li> <li>• To develop the ability to analyse and respond to natural and built site conditions.</li> <li>• To enable students to integrate landscape strategies across various projects through both theoretical and studio-based learning.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will gain understanding of site planning and landscape design principles and their application.</p> <p><b>CO2:</b> Student will conduct detailed site analyses incorporating environmental, social, and cultural factors to inform design strategies.</p> <p><b>CO3:</b> Students will apply appropriate landscape theories and innovative design approaches to a variety of project types.</p> <p><b>CO4:</b> Students will integrate sustainable landscape solutions within urban and rural design contexts.</p> <p><b>CO5:</b> Students will communicate landscape design concepts effectively using visual and verbal presentation techniques.</p>					
Mapping between COs with PSOs	<b>COs</b>	<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite	Nil					

## Course Content

### **Unit 1: Site Analysis and Inventory**

- Collect data on on-site and off-site factors:
  - Topography, slopes, drainage
  - Soil types and layers
  - Sensitive areas and natural ecosystems
  - Vegetation and tree surveys
- Use symbols and graphical representations for site inventory and analysis

### **Unit 2: Landforms and Contours**

- Read and interpret survey maps
- Understand landforms, topography, and contour lines
- Practical skills:
  - Identifying contours and contour analysis
  - 3D modeling of the site
  - Using existing levels to minimize cut and fill
- Plan for effective site drainage and rainwater harvesting

### **Unit 3: Elements of Designed Landscapes**

- Use of landforms, water, plants, and built elements in landscape design
- Application of materials and street furniture
- Understand physical properties, spatial effects, and design values
- Principles of planting design and plant selection

### **Unit 4: Site Circulation**

- Design considerations for circulation networks (pedestrian and vehicular)
- Study of road types, hierarchy, and network planning
- Consider turning radius, street intersections, and parking standards
- Integration with existing contour profile and landscape

### **Unit 5: Site Services**

- Design of site-level infrastructure:
  - Water supply and sewage conveyance
  - Positive drainage and surface runoff management
  - Rainwater harvesting
- Location and design of sewage treatment plants

## Professional Practice - II

Course Code						
Course Title	<b>Professional Practice - II</b>					
Marks	100	Credits			2	
Teaching per Week	2 hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop an understanding of professional roles, responsibilities, and ethical standards in architectural practice.					
Course Objective	<ul style="list-style-type: none"> <li>To equip students with knowledge of tendering, contracts, dispute resolution, land acquisition, easements.</li> <li>To equip students with professional knowledge and skills required for architectural practice, professional roles, ethics and legal frameworks in real-world scenarios.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Student will interpret tender and contract documents, identifying potential issues in execution.</p> <p><b>CO2:</b> Student will analyse disputes and apply arbitration or conciliation methods for resolution.</p> <p><b>CO3:</b> Student will evaluate land acquisition and easement laws, applying them in architectural planning.</p> <p><b>CO4:</b> Student will examine legal obligations in building maintenance, repairs, and fixtures, and integrate them into professional practice.</p>					
Mapping between COs with PSOs	<b>COs</b>	<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite	Nil					
Course Content	<p><b>Unit 1: Tender and Contract Basics</b></p> <ul style="list-style-type: none"> <li>Tendering Process: Definition, purpose, types of tenders (open, selective, negotiated, limited, and global).</li> </ul>					

- Tender Documents: Notice inviting tender, instructions to tenderers, schedule of quantities, specifications, drawings, general and special conditions.
- Contracts in Architecture: Nature and formation of contracts, types (lump sum, item rate, cost plus, turnkey, BOT/PPP).
- Common Issues in Contracts: Breach of contract, delays, termination, liquidated damages, escalation clauses.
- Role of Architect: As an agent, certifier, and contract administrator.

#### **Unit 2: Dispute Resolution – Arbitration and Conciliation**

- Dispute in Construction Projects: Causes (payment delays, defective work, scope changes, misinterpretation of clauses).
- Arbitration: Concept, legal framework (Arbitration and Conciliation Act, 1996), appointment of arbitrator, arbitration procedure, award enforcement.
- Conciliation and Mediation: Informal resolution methods, advantages over litigation.
- Role of Architect: As an expert witness, mediator, or arbitrator in disputes.

#### **Unit 3: Land Acquisition and Easements Law**

- Land Acquisition: Principles, procedures under Land Acquisition Act (Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013).
- Compensation and Rehabilitation: Criteria for valuation of land/buildings, rehabilitation/resettlement of displaced persons.
- Easement Rights: Right of way, light and air, support, water rights; affect building design and planning.
- Urban Land Ceiling and Regulation Act (ULCRA) and implications for architects.

#### **Unit 4: Building Laws and Legal Issues in Practice**

- Repairs and Dilapidation: Definition, architect's role in advising landlord/tenant, obligations under lease agreements.
- Waste and Fixtures: Legal meaning of waste (voluntary, permissive, equitable waste), distinction between movable/immovable fixtures, rights of property owner vs. tenant.
- Building Maintenance Laws: Responsibilities of owners, societies, municipalities.
- Legal Responsibilities of Architects: Duties under Architects Act 1972, liabilities in contract administration.

## Town Planning

Course Code						
Course Title	<b>Town Planning</b>					
Marks	100	Credits			4	
Teaching per Week	4hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To introduce the principles of town planning for creating sustainable, functional, and well-organized urban environments that promote responsible and resilient development.					
Course Objective	<ul style="list-style-type: none"> <li>• To understand the history, evolution, and fundamental principles of town planning and urban design.</li> <li>• To explore key components of urban systems — including land use, transport, housing, and public spaces.</li> <li>• To develop the ability to analyse urban challenges and propose innovative, context-sensitive strategies for resilient urban development.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Students will understand the history, evolution, and fundamental principles of town planning.</p> <p><b>CO2:</b> Students will analyse urban land use patterns, perform site suitability assessments, and evaluate the social and economic impacts of land use policies and zoning regulations.</p> <p><b>CO3:</b> Students will apply urban design and master planning principles to create functional, sustainable, and integrated urban environments.</p> <p><b>CO4:</b> Students will interpret and apply legal, policy, and regulatory frameworks.</p>

## SEMESTER - 9

### Architectural Design Studio - IX

Course Code						
Course Title	<b>Architectural Design Studio - IX</b>					
Marks	100	Credits		10		
Teaching per Week	14hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop an understanding of towns and cities in their historical, natural, and functional contexts, and apply this knowledge to design context-sensitive public buildings.					
Course Objective	<ul style="list-style-type: none"> <li>• To analyse urban patterns, site conditions, and develop programmatic requirements influencing architectural design.</li> <li>• To explore and evaluate alternative design approaches responding to contextual, social, and functional needs.</li> <li>• To develop architectural solutions that integrate creativity with sensitivity to urban context and user requirements.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Student will study and analyse the history, evolution, and demographic patterns of towns and cities to understand urban development trends.</p> <p><b>CO2:</b> Student will assess natural elements, regional connectivity, and urban infrastructure to evaluate their impact on settlement patterns.</p> <p><b>CO3:</b> Student will examine administrative setups, development control mechanisms, and settlement typologies to identify suitable sites for design.</p> <p><b>CO4:</b> Student will develop architectural design solutions for public buildings that are contextually responsive and functionally efficient.</p>

## Research methods & Technical writing

Course Code			
Course Title	<b>Research methods &amp; Technical writing</b>		
Marks	100	Credits	4
Teaching per Week	4hr		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To develop analytical, critical thinking, and data interpretation skills while emphasizing accurate communication of complex architectural ideas through structured methodologies and professional standards.		
Course Objective	<ul style="list-style-type: none"> <li>• To develop the ability to collect, analyse, and critically evaluate architectural and environmental data.</li> <li>• To enhance proficiency in written, visual, and verbal communication for effective professional expression.</li> <li>• To strengthen research skills through appropriate methodologies, data interpretation, and coherent presentation of findings.</li> </ul>		
Course Outcomes	<p><b>CO1:</b> Students will conduct comprehensive research using appropriate data collection and analysis techniques.</p> <p><b>CO2:</b> Students will critically evaluate and interpret data, reports, and scholarly literature to inform architectural design decisions.</p> <p><b>CO3:</b> Students will articulate research findings and technical concepts through well-structured reports, papers, and presentations.</p> <p><b>CO4:</b> Students will demonstrate mastery of technical writing conventions, including clarity, coherence, and accuracy.</p> <p><b>CO5:</b> Students will apply various research methodologies—such as qualitative analysis, case studies, and surveys—to support project development and architectural inquiry.</p>

## Building Economics and Real Estate

Course Code						
Course Title	<b>Building Economics and Real Estate</b>					
Marks	100	Credits	4			
Teaching per Week	4hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To equip students with an understanding of economic principles, project financing, and real estate management to support informed decision-making in building design, construction, and investment.					
Course Objective	<ul style="list-style-type: none"> <li>• To analyse project inputs, assess financial viability, and understand market dynamics influencing architectural and real estate development.</li> <li>• To apply economic and legal principles for informed decision-making in planning, design, and management of building projects.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Student will understand and apply micro and macroeconomic principles to assess the feasibility of building and real estate projects.</p> <p><b>CO2:</b> Student will analyse project inputs including land, labour, capital, and materials, and evaluate their impact on construction economics.</p> <p><b>CO3:</b> Student will calculate investment returns using concepts like IRR, Present Value, and profitability measures for architectural and real estate projects.</p> <p><b>CO4:</b> Student will perform economic analyses, cost projections, and valuation studies while considering legal and institutional frameworks in real estate and building projects.</p>

## Urban Design (Seminar)

Course Code						
Course Title	<b>Urban Design (Seminar)</b>					
Marks	100	Credits			2	
Teaching per Week	4hr					
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)					
Effective From	June 2025					
Purpose of Course	To develop understanding of urban design principles, contextual analysis, and sustainable strategies for proposing innovative, human-centric urban interventions.					
Course Objective	<ul style="list-style-type: none"> <li>• To analyse urban spaces and study relevant precedents to understand design, planning, and social dynamics.</li> <li>• To develop seminar-based conceptual proposals that integrate design thinking with contextual and societal considerations.</li> </ul>					
Course Outcomes	<p><b>CO1:</b> Student will analyse urban forms, public spaces, and city structures to understand the principles of urban design.</p> <p><b>CO2:</b> Student will evaluate contextual and environmental factors to propose sustainable urban design strategies.</p> <p><b>CO3:</b> Student will develop conceptual urban design proposals through research, sketches, and diagrams.</p> <p><b>CO4:</b> Student will present, defend, and critically review urban design ideas, integrating feedback and best practices.</p>					
Mapping between COs with PSOs	<b>COs</b>	<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
Prerequisite	Nil					
Course Content	<p><b>Unit 1: Introduction to Urban Design</b></p> <ul style="list-style-type: none"> <li>• Understanding the scope, importance, and objectives of urban design.</li> </ul>					

	<ul style="list-style-type: none"> <li>• Urban design as an interdisciplinary field: architecture, planning, landscape, and sociology.</li> <li>• Key principles of urban design: legibility, connectivity, scale, and human experience.</li> <li>• Discussion on urban design theories and philosophies.</li> </ul> <p><b>Unit 2: Urban Form and Public Spaces</b></p> <ul style="list-style-type: none"> <li>• Study of urban morphology: streets, blocks, plots, and land use patterns.</li> <li>• Role of public spaces: squares, parks, waterfronts, plazas, and streetscapes.</li> <li>• Analysis of pedestrian movement, accessibility, and urban connectivity.</li> <li>• Case studies of exemplary urban spaces and their social, cultural, and functional aspects.</li> </ul> <p><b>Unit 3: Contextual and Sustainable Urban Design</b></p> <ul style="list-style-type: none"> <li>• Designing for climate, topography, and local context.</li> <li>• Sustainable urban design strategies: green infrastructure, storm water management, and energy efficiency.</li> <li>• Integration of transport, utilities, and urban services in design.</li> <li>• Community participation and inclusive design approaches.</li> </ul> <p><b>Unit 4: Urban Design Projects and Research</b></p> <ul style="list-style-type: none"> <li>• Seminar-based discussion of live or hypothetical urban design projects.</li> <li>• Development of conceptual proposals, sketches, and diagrams for urban interventions.</li> <li>• Critical analysis of urban design precedents and best practices.</li> <li>• Presentation and defence of urban design ideas with feedback from peers and faculty.</li> </ul>

## SEMESTER - 10

### Architectural Dissertation

Course Code			
Course Title	<b>Architectural Dissertation</b>		
Marks	100	Credits	24
Teaching per Week	30hr		
Minimum weeks per Semester	18 (Class work, Examination, Preparation, Holidays etc.)		
Effective From	June 2025		
Purpose of Course	To integrate theory and practice by developing a comprehensive architectural design project that demonstrates analytical thinking, technical proficiency, and effective communication of strategies.		
Course Objective	<ul style="list-style-type: none"><li>• To research, analyse, and develop context-sensitive and innovative architectural design solutions.</li><li>• To enhance professional communication, technical competencies and report writing in architectural practice.</li></ul>		
Course Outcomes	<p><b>CO1:</b> Students will identify and select a relevant architectural topic, formulate research questions, and define objectives based on literature review.</p> <p><b>CO2:</b> Students will conduct comprehensive research using appropriate methodologies, analyse site and contextual data.</p> <p><b>CO3:</b> Students will develop design concepts and innovative solutions integrating sustainability, functionality, aesthetics, and cultural relevance.</p> <p><b>CO4:</b> Students will produce detailed architectural designs, technical drawings, and 3D models incorporating structural, material, and environmental considerations.</p> <p><b>CO5:</b> Students will effectively document and communicate research findings and design solutions through reports, presentations, and visual media.</p>		

Mapping between COs with PSOs	<b>COs</b>	<b>PSO1</b>	<b>PSO2</b>	<b>PSO3</b>	<b>PSO4</b>	<b>PSO5</b>
	<b>CO1</b>					
	<b>CO2</b>					
	<b>CO3</b>					
	<b>CO4</b>					
	<b>CO5</b>					
Prerequisite	Nil					
Course Content	<p><b>Unit 1: Introduction &amp; Topic Selection</b></p> <ul style="list-style-type: none"> <li>Understanding the purpose, scope, and significance of the dissertation</li> <li>Identifying individual interests and specialization areas</li> <li>Brainstorming and selecting a relevant, feasible topic</li> <li>Reviewing existing literature and current debates</li> <li>Formulating initial research questions and objectives</li> </ul> <p><b>Unit 2: Identification of Research Method &amp; Site/Context Analysis</b></p> <ul style="list-style-type: none"> <li>Defining research methods: qualitative, quantitative, mixed</li> <li>Developing strategies: case studies, surveys, historical research, site analysis</li> <li>Understanding ethical considerations in research</li> <li>Conducting site visits and analysing social, cultural, environmental, and physical contexts</li> <li>Examining zoning, regulations, and urban fabric (if applicable)</li> </ul> <p><b>Unit 3: Concept Development &amp; Design Ideation</b></p> <ul style="list-style-type: none"> <li>Developing design concepts based on research findings</li> <li>Incorporating sustainability, cultural relevance, and innovative solutions</li> <li>Exploring spatial organization, form, aesthetics, and functionality</li> <li>Creating conceptual sketches, diagrams, and initial models</li> </ul> <p><b>Unit 4: Design Development &amp; Technical Detailing</b></p> <ul style="list-style-type: none"> <li>Refining designs based on feedback</li> <li>Developing detailed architectural plans, sections, elevations, and 3D models</li> <li>Addressing structural, environmental, material, and construction aspects</li> </ul>					

	<ul style="list-style-type: none"> <li>Integrating sustainability and technical considerations</li> </ul> <p><b>Unit 5: Documentation, Presentation &amp; Review</b></p> <ul style="list-style-type: none"> <li>Preparing comprehensive drawings, models, and visual presentations</li> <li>Writing the dissertation report with proper referencing and formatting</li> <li>Presenting and defending the project to juries and peers</li> <li>Incorporating feedback and reflecting on learnings from the process</li> </ul>
