

## B. Sc. Microbiology Syllabus

Name of Program	<b>B. Sc. Microbiology</b>
Abbreviation	<b>MB</b>
Duration	<b>3 Years</b>
Eligibility Criteria	<b>Basic science</b>
Objective of Program	To convey scientific and technological knowledge and information with modern age orientation. To help young learners and realize that science and technology, both hand in hand can enrich and develop a personality, thus promising a life of success and achievement.
Program Outcome	<p>PO1: Students shall learn various aspects of microbiology such as bacteriology, virology, algology, microbial physiology, bacterial genetics, immunology, biochemistry, rDNA technology.</p> <p>PO2: Students shall gain knowledge of applied microbiology such as industrial microbiology, environmental microbiology, industrial microbiology, food and dairy microbiology.</p> <p>PO3: Students shall learn about the presence of microorganisms in air, water, soil and its role in developing a sustainable environment.</p> <p>PO4: Students shall acquire the awareness regarding the importance of microorganisms in plant, animal, human health and diseases.</p> <p>PO5: Students shall gain knowledge of microbial technology and its applications in in the production of industrially important microbial products.</p> <p>PO6: Students shall become aware of the role of microbes in the development of molecular biology and the advancements in genetic modifications technologies.</p> <p>PO7: Generate skilled manpower ready to use by industries in various sectors.</p>
Program Specific Outcomes	<p>Students will be able to appear and qualify for competitive exams like NET, GSET, and GATE. They will be skilled enough to join any research institute, Biopharma industry or even start ventures of their own.</p> <p>PSO1: Students will develop skill to observe, isolate, identify and cultivate microorganisms.</p> <p>PSO2: Students will acquire and demonstrate proficiency in good laboratory practices in microbiology laboratory.</p> <p>PSO3: Students will develop practical skills of tools and techniques used to study microbiology.</p> <p>PSO4: Students will develop oral and written communication skills, effective presentation skills and interpretation skill from observed results.</p> <p>PSO5: Students will be graduates in microbiology who shall</p>

understand the societal problems and play a vital role by providing microbial solutions.  
 PSO6: Students will be able to build their careers in public and global health, environmental organizations, food, pharmaceuticals and fermentation industries.

Course Title	<b>HISTORY AND SCOPE OF MICROBIOLOGY</b>						
Credit	2						
Teaching per Week	4						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2019						
Purpose of Course	The main aspect of this paper is to study and understand the scope of microbiology with major groups of microorganisms, ancient history and discovery of microbial world. An aim of this paper is to present existing development of the microbiology in diversified area.						
Course Objective	<p>To understand the importance of microbiology and microorganisms in the living world.</p> <p>To study the major groups of microorganisms</p> <p>To gain an insight of discovery of microorganisms</p> <p>To learn about the development of various branches of microbiology</p>						
Course Outcomes	<p>CO1: Students will learn the multifaceted existence of microorganisms.</p> <p>CO2: Students will gain knowledge about the major groups of microorganisms and its distribution.</p> <p>CO3: Students will learn about the discovery of microbial world Students will know about the role of microorganisms in disease development</p> <p>CO4: Students will gain awareness regarding the development of pure culture techniques, chemotherapy, agricultural microbiology, immunology and biotechnology.</p>

Evaluation Method	30% Internal assessment based on class attendance, participation, class test, quiz, assignment, seminar, internal examination, etc. 70% External based on semester end University examination

Course Code	<b>MB 102</b>						
Course Title	<b>FUNDAMENTALS OF MICROSCOPY</b>						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2019						
Purpose of Course	The main aspect of this paper is to study and understand the basic principle of microscopy. It focused on different type of fundamental and advanced microscopic techniques. Also provide knowledge related to different types of dyes, staining and staining theories of bacteria.						
Course Objective	To understand the fundamentals of microscopy To learn different types of light microscopy and its uses To study electron microscopy, its types and advances in electron microscopy. To learn basics of dyes and stains and the principle of staining microorganisms						
Course Outcomes	CO1: Students will learn the relevance of resolving power, numerical aperture and lens aberrations in the working of microscopy. Students will understand the importance of ocular and condenser.  CO2: Students will understand the principle and working of light microscope. Students will acquire knowledge of types of light microscopy  CO3: Students will learn electron microscopy Students will become aware different types of electron microscopy and its applications  CO4: Students will gain understanding regarding dyes and stains Students will learn the theory and technique of staining bacteria.

Course Title	<b>Microbiology Practical</b>						
Credit	2						
Teaching per Week	4 Hrs						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2020						
Purpose of Course	To provide hand's on experience of using instruments in the laboratory for microbiology purpose.						
Course Objective	Students will able to learn about basic working principles of microscope, various staining techniques and various instruments.						
Course Outcomes	CO1-CO4: students will able to learn about basic instruments. CO5-CO7: Students will learn about concepts of pH meter as well as basic morphological structure of yeast/bacteria. CO8: Students will learn to prepare basic laboratory working solutions. CO9-CO12: Students will learn about basic staining techniques.

Semester 2 MB

Course Code	<b>MB 201</b>						
Course Title	<b>PROKARYOTIC AND ARCHAEL CELL STRUCTURE</b>						
Credit	2						
Teaching per Week	4 Hrs						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2020						
Purpose of Course	The main aspects of this paper are to describe the basic structure of typical prokaryotes and archaea. It focuses on important differences in structure between bacteria and archaea.						
Course Objective	<p>To understand the importance of cell morphology and cell size of microorganisms.</p> <p>To study the structural and functional aspects of microbial cell wall and cell membrane.</p> <p>To learn the surface structures and inclusion bodies.</p> <p>To gain knowledge of spores and its function.</p> <p>To enable students to understand flagellar motility and chemotaxis.</p>						
Course Outcomes	<p>CO1: Students shall understand the importance of size and morphology of microorganisms. Students shall gain knowledge of cell membrane and its function.</p> <p>CO2: Enable the students to understand the structural formation of peptidoglycan and LPS. Students shall learn differences of bacterial and archaeal cell wall.</p> <p>CO3: Acquire knowledge of cell surface structure as well as cell inclusions.</p> <p>CO4: Students shall gain knowledge regarding the structure and function of flagella. Students shall learn about microbial motility and chemotaxis.</p>

Course Title	<b>NUTRITION AND GROWTH OF BACTERIA</b>						
Credit	2						
Teaching per Week	4 Hrs						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2020						
Purpose of Course	The main objective of this paper is to understand diversified nutritional requirements of microorganisms and their cultivation using various different media. It also focuses on bacterial and archaeal reproduction, cell cycle, growth curve and effect of various environmental factors on growth of microorganisms.						
Course Objective	<p>To understand modes of bacterial nutrition, nutritional requirements and its uptake.</p> <p>To distinguish microorganisms as per their nutritional types.</p> <p>To understand bacterial cell cycle, growth curve, growth measurement.</p> <p>To gain understanding of cultivation of bacteria and its enrichment.</p> <p>To learn the effect of environmental factors on growth.</p>						
Course Outcomes	<p>CO1: Students shall gain knowledge regarding the nutritional requirements of bacteria.Enable the students to classify microorganisms on their nutritional types.</p> <p>CO2: Students shall learn bacterial reproduction. Students shall gain knowledge of bacterial cell cycle, growth curve and measurements of growth.</p> <p>CO3: Students shall gain knowledge of cultivation of bacteria on different media.Acquire knowledge regarding pure culture, isolation and enrichment.</p> <p>CO4: Gain understanding regarding the various environmental factors affecting the growth of microorganisms.</p>

Course Title	Microbiology practical																																																																																																
Credit	2																																																																																																
Teaching per Week	4 Hrs																																																																																																
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)																																																																																																
Effective From	June 2020																																																																																																
Purpose of Course	To provide hand's on experience of using instruments in the laboratory for microbiology purpose.																																																																																																
Course Objective	Microbiology is practical based course so main objective of this course is to acquaint students about how to isolate, enrich and observe bacteria by learning basic fundamental techniques.																																																																																																
Course Outcomes	CO1-CO7 : To learn different staining techniques and observation of different type of cells under microscope. CO8 : To learn how to culture bacteria. CO9 : This group of practical's is based on isolation of bacteria. CO10: To learn isolation of anaerobic bacteria. CO11-12 : To learn about preservation and the factors which influence the growth of bacteria.

B.Sc. Microbiology III and IV

Name of Program	<b>B. Sc. Microbiology</b>
Abbreviation	<b>MB</b>
Duration	<b>2 Years</b>
Eligibility Criteria	Basic Science
Objective of Program	To convey scientific and technological knowledge and information with modern age orientation. To help young learners and realize that science and technology, both hand in hand can enrich and develop a personality, thus promising a life of success and achievement.
Program Outcome	<p>PO1: Students shall learn various aspects of microbiology such as bacteriology, virology, algology, microbial physiology, bacterial genetics, immunology, biochemistry, rDNA technology.</p> <p>PO2: Students shall gain knowledge of applied microbiology such as industrial microbiology, environmental microbiology, industrial microbiology, food and dairy microbiology.</p> <p>PO3: Students shall learn about the presence of microorganisms in air, water, soil and its role in developing a sustainable environment.</p> <p>PO4: Students shall acquire the awareness regarding the importance of microorganisms in plant, animal, human health and diseases.</p> <p>PO5: Students shall gain knowledge of microbial technology and its applications in in the production of industrially important microbial products.</p> <p>PO6: Students shall become aware of the role of microbes in the development of molecular biology and the advancements in genetic modifications technologies.</p> <p>PO7: Generate skilled manpower ready to use by industries in various sectors.</p>
Program Specific Outcomes	<p>Students will be able to appear and qualify for competitive exams like NET, GSET, and GATE. They will be skilled enough to join any research institute, Biopharma industry or even start ventures of their own.</p> <p>PSO1: Students will develop skill to observe, isolate, identify and cultivate microorganisms.</p> <p>PSO2: Students will acquire and demonstrate proficiency in good laboratory practices in microbiology laboratory.</p> <p>PSO3: Students will develop practical skills of tools and techniques used to study microbiology.</p> <p>PSO4: Students will develop oral and written communication skills, effective presentation skills and interpretation skill from observed results.</p> <p>PSO5: Students will be graduates in microbiology who shall</p>

understand the societal problems and play a vital role by providing microbial solutions.  
 PSO6: Students will be able to build their careers in public and global health, environmental organizations, food, pharmaceuticals and fermentation industries.

### B.Sc. 3<sup>rd</sup> Semester

Course Code	MB 301						
Course Title	Principle of bacterial systematic						
Credit	2						
Teaching per Week	2Hrs						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2019						
Purpose of Course	The paper explores microbial taxonomy and classification of bacteria using an evolutionary framework. Bacterial taxonomy and phylogeny gives an understanding regarding degree of prokaryotic diversity unmatched by eukaryotic unicellular and multicellular organisms.						
Course Objective	<ul style="list-style-type: none"> <li>• To understand taxonomic ranks and taxonomic phylogeny</li> <li>• To study classical and molecular characteristics for microbial taxonomy</li> <li>• To understand Bergey's manual of systematic bacteriology</li> <li>• To study archea and its classification</li> <li>• To acquire knowledge of taxonomy of proteobacteria</li> </ul>						
Course Outcomes	<p>CO 1: Students will learn evolutionary process of microorganisms. Students will able to classify microorganisms based on their cultural and molecular characteristics.</p> <p>CO 2: Students will gain knowledge of the unique characteristics of archea , its adaptation and importance</p> <p>CO 3: Students shall understand the major classes of proteobacteria and important phyla</p> <p>CO 4: Students shall understand aerobic endospore former .</p>

Course Content

Course Content

	UNIT 1	Microbial Taxonomy and the Evolution of Diversity
		Teaching Duration: Lecture
1.1	Microbial Taxonomy	
1.2	Taxonomic Ranks	
1.3	Microbial taxonomy and phylogeny 1.3.1 Classical Characteristics 1.3.2 Molecular Characteristics: Nucleic acid hybridization, Nucleic acid base composition	
1.4	Evolutionary process and the concept of microbial species	
1.5	Bergey's Manual of systematic bacteriology	

	UNIT 2	Taxonomy of Archaea
		Teaching Duration: Lectures
2.1	Overview of Archaea	
2.2	Major groups of <i>Archaea</i>	
2.3	Phylum <i>Crenarchaeota</i>	
2.4	Phylum <i>Euryarchaeota</i> 2.4.1 Methanogens and Methanotrophs 2.4.2 Halobacteria	

	UNIT 3	Taxonomy of Proteobacteria
		Teaching Duration: Lectures
3.1	Class <i>Alphaproteobacteria</i> : Order <i>Rhizobiales</i>	
3.2	Class <i>Beta Proteobacteria</i> : Order <i>Hydrogenophiales</i>	
3.3	Class <i>Gamma Proteobacteria</i> : Order <i>Enterobacteriales</i>	
3.4	Class <i>Delta Proteobacteria</i> : Order <i>Bdellovibrionales</i>	
3.5	Class <i>Epsilonproteobacteria</i>	

	UNIT 4	Important groups of bacteria
		Teaching Duration: Lectures
4.1	Class <i>Bacilli</i> : Aerobic endospore forming bacteria	
4.2	Class <i>Mollicutes</i>	
4.3	Phylum <i>Cyanobacteria</i>	
4.4	Phylum <i>Spirochaetes</i>	
4.5	Phylum <i>Bacteroidetes</i>

Evaluation Method	30% Internal assessment based on class attendance, participation, class test, quiz, assignment, seminar, internal examination, etc. 70% External based on semester end University examination

Course Code	<b>MB : 302</b>
Course Title	Control of microorganism in the environment
Credit	2
Teaching per Week	2 Hrs
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)
Effective From	June 2019
Purpose of Course	The paper includes the study of the control and destruction of microorganisms. It includes the physical and chemical methods to control pathogens and prevent their transmission and to reduce or eliminate microbes responsible for the contamination of food, water and other substances.
Course Objective	<ul style="list-style-type: none"> <li>• To understand the principle of controlling the presence of microorganisms.</li> <li>• To study the physical agents and mechanisms used for the control.</li> <li>• To learn the effect of various chemical agents used for the microbial control.</li> <li>• To understand the mechanism of control of chemical agents.</li> <li>• To acquire the ability to select the control agent in the environment.</li> </ul>
Course Outcomes	<p>CO 1: Students will gain knowledge of the role of microbial control in disease transmission.</p> <p>CO 2: Gain knowledge of physical and mechanical of microbial control and mode of action of each</p>

	CO 3: Students shall understand the major chemical agents and its microbicidal effect. CO 4: Shall enable the students to understand the machanisms of chemical control.

Course Content	<b>Course Content</b>	
	<b>UNIT 1</b>	<b>Basic Principles of Microbial Control</b>
	Teaching Duration: Lectures 07	
	1.1	Terminology of Microbial Control
	1.2	Microbial Death Rates
	1.3	Action of Antimicrobial Agents
	1.4	The Selection of Microbial Control Methods
	1.5	Situational Considerations
	<b>UNIT 2</b>	<b>Mechanical and Physical Methods for Microbial Control</b>
	Teaching Duration: Lectures 08	
	2.1	Filtration
	2.2	Heat Related Methods
	2.3	Refrigeration and Freezing
	2.4	Desiccation and Lyophilization
	2.5	Osmotic Pressure
	2.6	Radiation
	<b>UNIT 3</b>	<b>Chemical Methods for Microbial Control – I</b>
	Teaching Duration: Lectures 07	
	3.1	Choosing a Microbicidal Chemical
	3.2	Factors Affecting Germicidal Activity of Chemicals
3.3	The Halogens Antimicrobial Chemical	
3.4	Phenols: Its derivatives and Applications	
3.5	Alcohols	
<b>UNIT 4</b>	<b>Chemical Methods for Microbial Control - II</b>	
Teaching Duration: Lectures 08		
4.1	Hydrogen Peroxide and related Germicides	
4.2	Chemicals with Surface Action: Detergents	
4.3	Heavy Metals	
4.4	Aldehydes	
4.5	Gaseous Sterilants and Disinfectants	
4.6	Dyes	
4.7	Acid and Alkalies

Course Title	Virology
Credit	2
Teaching per Week	2 Hrs
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)
Effective From	June 2019
Purpose of Course	The aim of the paper is to realize the increasing importance of virology. Students shall learn the origin, basic structure of virus and its classification. It teaches the cultivation and reproduction of virus. The paper also includes the role of virus in disease as well as cancer but also a study on viruses associated with plant, animal, insects and archaeal viruses.
Course Objective	<ul style="list-style-type: none"> <li>To give an overview of medically important virus families.</li> <li>To describe the structure, classification and cultivation of viruses.</li> <li>To understand the replication strategies of viruses.</li> <li>To study virus like infectious particles</li> <li>To study the role of virus and virus host.</li> </ul>

Course Outcomes	CO 1: Students will gain knowledge of the structure of viruses and its origin CO 2: Students shall learn about classification of viruses and knowledge of emerging viruses threatening the world CO 3: Enable students to understand virus replication. CO 4: Students shall understand the role of viruses in cancer.

Course Code	MB 401						
Course Title	Biological molecules						
Credit	2						
Teaching per Week	2 Hrs						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2019						
Purpose of Course	<p>Course overview:                      The paper gives an understanding of biomolecules found in all living organisms including microbes. Students shall learn important biomolecules such as proteins, enzymes, carbohydrates, lipids and nucleic acids. They shall become aware of the structure, types and the important functions of biomolecules.</p>						
Course Objective	<ul style="list-style-type: none"> <li>• To study the structure and properties of amino acids and proteins.</li> <li>• To understand classification of enzymes and enzyme activity.</li> <li>• To understand types of carbohydrates and its importance.</li>   <li>• To gain knowledge of lipids, its structure and functions.</li> <li>• To enable students to understand DNA and RNA.</li> </ul>						
Course Outcomes	<p>CO 1: Students shall understand the structure of Amino acid and its role in peptide bond formation also gain knowledge about structure and function of protein and enzymes.</p> <p>CO 2: Students will understand the stereochemistry of carbohydrates and its functions.</p> <p>CO 3: Students shall acquire knowledge about lipids , their classification and importance</p> <p>CO 4: acquire knowledge about structure and denaturation of nucleic acids.</p>

Course Content

	UNIT 1	Mycology
		Teaching Duration: Lectures 07
1.1	Importance of fungi	
1.2	Distinguishing characteristics of fungi	
1.3	Morphology of fungi	
1.4	Reproduction of fungi	
1.5	Cultivation of fungi	

	UNIT 2	Classification of fungi
		Teaching Duration: Lectures 08
2.1	The Chytridiomycota	
2.2	The Zygomycota	
2.3	The Ascomycota	
2.4	The Basidiomycota	
2.5	The Microsporidia	
2.6	The Glomeromycota	

	UNIT 3	Phycology
		Teaching Duration: Lectures 08
3.1	Occurrence of algae	
3.2	Characteristics of algae	
3.3	Algae and diseases	
3.4	Biological and economic importance of algae	
3.5	Lichen	

	UNIT 4	Protozoology
		Teaching Duration: Lectures 07
4.1	Occurrence of protozoa	
4.2	Ecology of protozoa	
4.3	The importance of protozoa	
4.4	Morphology of protozoa	
4.5	Reproduction of protozoa

Teaching Methodology	Classwork, Discussion, Self-Study, Seminars and/or Assignment
Evaluation Method	30% Internal assessment based on class attendance, participation, class test, quiz, assignment, seminar, internal examination, etc. 70% External based on semester end University examination

Course Code	MB 403								
Course Title	Microbial ecosystem								
Credit	2								
Teaching per Week	2Hrs								
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)								
Effective From	June 2019								
Purpose of Course	<p>Microbial ecology is concerned with microbial processes that occur in ecosystem. It explains how nutrient availability and environmental factors influence microbial growth in various ecosystems. Student shall understand the role of microorganisms in evolution of life and balance of ecosystem. The objective of the paper is to give an understanding of the varied microbial interactions and its impact in sustenance of ecosystem.</p>								
Course Objective	<ul style="list-style-type: none"> <li>• To understand the role of microbial evolution in ecological development.</li> <li>• To learn the methods to study microbial ecology.</li> <li>• To gain an understanding of biogeochemical cycling and effect of global climate change.</li> <li>• To develop insight about microbial interactions.</li> <li>• To understand the role of microorganisms in ecosystem.</li> </ul>								
Course Outcomes	<p>CO 1: Shall give an insight of microbial role in evolution of life.  CO 2: Give an understanding of biogeochemical cycling.  CO 3: Students shall gain knowledge of microbial interactions and its significance.  CO 4: Gain knowledge of distribution and role of microorganisms in different habits and ecosystems.</p>

Course Title	<b>Semester IV Microbiology Practical</b>
Credit	3
Teaching per Week	6 Hrs
Minimum weeks per Semester	15 (Including Class work, examination, preparation, holidays etc.)
Effective From	June 2019
Purpose of Course	Purpose of the course is to understand the intracellular and extracellular enzyme activity and structure of fungi, algae and protozoa
Course Objective	<ul style="list-style-type: none"> <li>• To study the qualitative analysis of protein and carbohydrates</li> <li>• To understand the intracellular and extracellular enzyme activity.</li> <li>• To study the structure and function of important fungi</li> </ul>
Course Outcomes	CO 1- CO 2: To understand the presence of biomolecules such as protein and carbohydrates CO 3 -CO 4: To know the activity Of intracellular and extracellular enzymes.

	CO 5- CO 8: To understand the structure of fungi , algae and protozoa. CO 9 –CO 12 TO learn the isolation of different organisms from natural samples.

B.Sc. Microbiology V to VI

Name of Program	<b>B.Sc Microbiology</b>
Abbreviation	<b>MB</b>
Duration	<b>2 Years</b>
Eligibility Criteria	Basic Science
Objective of Program	To convey scientific and technological knowledge and information with modern age orientation. To help young learners and realize that science and technology, both hand in hand can enrich and develop a personality, thus promising a life of success and achievement.
Program Outcome	<p>PO1: Students shall learn various aspects of microbiology such as bacteriology, virology, algology, microbial physiology, bacterial genetics, immunology, biochemistry, rDNA technology.</p> <p>PO2: Students shall gain knowledge of applied microbiology such as industrial microbiology, environmental microbiology, industrial microbiology, food and dairy microbiology.</p> <p>PO3: Students shall learn about the presence of microorganisms in air, water, soil and its role in developing a sustainable environment.</p> <p>PO4: Students shall acquire the awareness regarding the importance of microorganisms in plant, animal, human health and diseases.</p> <p>PO5: Students shall gain knowledge of microbial technology and its applications in in the production of industrially important microbial products.</p> <p>PO6: Students shall become aware of the role of microbes in the development of molecular biology and the advancements in genetic modifications technologies.</p> <p>PO7: Generate skilled manpower ready to use by industries in various sectors.</p>
Program Specific Outcomes	<p>Students will be able to appear and qualify for competitive exams like NET, GSET, and GATE. They will be skilled enough to join any research institute, Biopharma industry or even start ventures of their own.</p> <p>PSO1: Students will develop skill to observe, isolate, identify and cultivate microorganisms.</p> <p>PSO2: Students will acquire and demonstrate proficiency in good laboratory practices in microbiology laboratory.</p> <p>PSO3: Students will develop practical skills of tools and techniques used to study microbiology.</p> <p>PSO4: Students will develop oral and written communication skills, effective presentation skills and interpretation skill from observed results.</p> <p>PSO5: Students will be graduates in microbiology who shall</p>

	understand the societal problems and play a vital role by providing microbial solutions. PSO6: Students will be able to build their careers in public and global health, environmental organizations, food, pharmaceuticals and fermentation industries.

Course Title	BACTERIALGENETICS						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2020						
Purpose of Course	Students learn about basic molecular biology concepts of replication, transcription, translation, mutation and genetic recombination.						
Course Objective	<ul style="list-style-type: none"> <li>• Students develop the knowledge of basic molecular biology.</li> <li>• Students also learn about genetic recombination and repair mechanism.</li> </ul>						
Course Outcomes	CO1: Students will learn about clear idea of basic molecular process. CO2: Students also acquire knowledge of gene regulation, genetic recombination. CO3: Students will learn about different types of mutation.

Course Title	<b>EUCARYOTIC TAXONOMY</b>
Credit	2
Teaching per Week	2
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)
Effective From	June 2020
Purpose of Course	Students will learn about differences in prokaryotic and eukaryotic structures. They also learn to differentiate single cell and multicellular organisms on the basis of taxonomy.

Course Objective	<ul style="list-style-type: none"> <li>• Student will learn about basic cell structure.</li> <li>• Students will know about fungus, protist and multicellular parasites.</li> </ul>																																																																																																												
Course Outcomes	<p>CO1: Students will acquire the basic knowledge of differences in prokaryotic and eukaryotic organisms on the basis of their structure.</p> <p>CO2: Students will learn about basic parasites and arthropod vectors.</p>

Course Title	<b>RECOMBINANT DNA TECHNOLOGY</b>
Credit	2
Teaching per Week	2
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)

Effective From	June 2020																					
Purpose of Course	To aware the students with advanced techniques of genetic engineering and its tools. To make them able to apply these techniques in the field of medicine, recombinant protein production and in agriculture.																					
Course Objective	To make students learn about genetic engineering and its tools.																					
Course Outcomes	CO1: Student become aware of all these technology and able to utilize it in field of agriculture, Medicine and Pharmacy Industry. CO2: Students will able to learn about application skills related to genetic engineering.

UNIT 2		TOOLS AND TECHNIQUES OF GENETIC ENGINEERING-I																																																																																																																							
Reference: Singh	Teaching Duration	10 Lectures																																																																																																																							
2.1	Restriction endonucleases																																																																																																																								
2.2	Modification of cut ends																																																																																																																								
2.3	Generation of DNA fragments for cloning																																																																																																																								
2.4	Construction of c-DNA library																																																																																																																								
2.5	Genomic library																																																																																																																								
2.6	Comparison between c-DNA and genomic library																																																																																																																								
2.7	Gel electrophoresis: Separation of DNA Molecules		(Madigan)																																																																																																																						
2.8	Nucleic acid hybridization and southern blot		(Madigan)																																																																																																																						
UNIT 3		TOOLS AND TECHNIQUES OF GENETIC ENGINEERING-II																																																																																																																							
Reference: Singh	Teaching Duration	10 Lectures																																																																																																																							
3.1	Vector																																																																																																																								
	3.1.1 Properties of good vector																																																																																																																								
	3.1.2 Cloning and Expression vectors																																																																																																																								
	3.1.3 Plasmid vectors-pBR322																																																																																																																								
	3.1.4 Bacteriophage vectors-λ phage.																																																																																																																								
	3.1.5 Cosmid vectors																																																																																																																								
	3.1.6 Phagemid vectors and Plasmid vectors																																																																																																																								
	3.1.7 Artificial chromosome vectors: BAC																																																																																																																								
	3.1.8 Shuttle Vectors																																																																																																																								
3.2	Gene fusion and reporter gene		(Madigan)																																																																																																																						
3.3	Hosts for cloning vectors		(Madigan)																																																																																																																						
3.4	Finding the right clone		(Madigan)																																																																																																																						
UNIT 4		APPLICATIONS OF rDNA TECHNOLOGY																																																																																																																							
Reference: Rastogi	Teaching Duration	10 Lectures																																																																																																																							
4.1	Production of recombinant therapeutic proteins																																																																																																																								
4.2	Production of recombinant vaccines																																																																																																																								
4.3	Bacillus thuringiensis based biopesticides																																																																																																																								
4.4	Development of Fungal, Bacterial and viral disease resistant plant.

Teaching Methodology	Classwork, Discussion, Self-Study, Seminars and/or Assignment																																																																																																																								
Evaluation Method	30% Internal assessment based on class attendance, participation, class test, quiz, assignment, seminar, internal examination, etc. 70% External based on semester end University examination																																																																																																																								

Course Code	<b>MB14</b>																																															
Course Title	<b>FUNDAMENTALS OF IMMUNOLOGY</b>																																															
Credit	2																																															
Teaching per Week	2																																															
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)																																															
Effective From	June 2020																																															
Purpose of Course	The Immunology course aims to provide an adequate understanding about the fundamentals of the immune system and the students gain knowledge about the features and mechanisms of innate and adaptive immune response. Be able to compare and contrast the innate versus adaptive immune systems																																															
Course Objective	To make students understand the organization of the immune system and host resistance against an invading organism. to provide students with a foundation in immunological processes																																															
Course Outcomes	<p>CO1: Explain students the insight of the immune system, physical barriers in non-specific resistance and organs and tissues of the immune system. A description of cells involved in the immune response either innate or acquired.</p> <p>CO2: Students gain understanding about processes of phagocytosis and inflammation.</p> <p>CO3: The course also explains the chemical mediators in non-specific resistance like cytokines, complement, acute-phase proteins and antimicrobial peptides.</p> <p>CO4: To provide an adequate knowledge about antigens, T cell biology, types of specific immunity and recognition of foreignness.</p> <p>CO5: To gain a deep knowledge about B cell biology, Immunoglobulin structure, function and classes.</p>																																															
Mapping between COs with PSOs	<table border="1"> <thead> <tr> <th></th> <th>PSO1</th> <th>PSO2</th> <th>PSO3</th> <th>PSO4</th> <th>PSO5</th> <th>PSO6</th> </tr> </thead> <tbody> <tr> <td>CO1</td> <td style="background-color: #cccccc;"></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO2</td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO3</td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td></td> </tr> <tr> <td>CO4</td> <td></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> </tr> <tr> <td>CO5</td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td></td> <td style="background-color: #cccccc;"></td> <td style="background-color: #cccccc;"></td> </tr> </tbody> </table>							PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	CO1							CO2							CO3							CO4							CO5

Evaluation Method	30% Internal assessment based on class attendance, participation, class test, quiz, assignment, seminar, internal examination, etc. 70% External based on semester end University examination																																										

Course Code	MBP:05								
Course Title	PRACTICALS								
Credit	6								
Teaching per Week	12								
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)								
Effective From	June 2020								
Purpose of Course	Purpose of the course is to learn the different isolation method for bacteria/fungi, Rapid kit based experiments for malaria and syphilis and estimation process of biomolecular structures like carbohydrate and protein.								
Course Objective	<ul style="list-style-type: none"> <li>To understand the morphological characteristics of yeast/Protozoa by microscopy</li> <li>To study the quantitative estimations of protein and sugar.</li> <li>To understand the isolation and study of water organisms</li> <li>To understand the plant pathogenic bacteria</li> </ul>								
Course Outcomes	<p>CO1: Students will learn about isolation, extraction and purification of DNA.</p> <p>CO2-CO3: Students will learn about basic morphological structure of living cell by dark field as well as phase contrast microscopy.</p> <p>CO4-CO5: Students will learn about isolation methods for antibiotic resistance as well as pigmented mutants by U.V. rays.</p> <p>CO6-CO7: students will learn about estimation of sugar and protein.</p> <p>CO8-CO10: Students will have knowledge about widal, RPR and blood group testing via kit based method.</p> <p>CO11-CO14: Students will learn isolation of fecal indicator, detection and enumeration method.</p> <p>CO15-16: Students will learn about isolation of coliphage and pathogenic bacteria.</p> <p>CO17-CO18: Through permanent slides of pathogenic vector and fungi, students will learn about basic morphological structure.</p>

**B.Sc. 6 Semester**

**MB:17FOODAND DAIRYMICROBIOLOGY**

Course Code	<b>MB:17</b>						
Course Title	<b>FOODAND DAIRYMICROBIOLOGY</b>						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	2020- 2021						
Purpose of Course	Purpose of the course is to make the students able to understand the relationship of food with microorganisms and also make them able to understand how orga are advantagious for human						
Course Objective	Students learn about various organisms involved in food and dairy technology. Students will Learn about food storage , spoilage and fermented food.						
Course Outcomes	CO 1: Students come out with the knowledge of food and dairy industry CO2: To understand the relationship of organisms with food and its uses in human

Course Content

UNIT 1		INTRODUCTION TO FOOD MICROBIOLOGY	
Reference: 4 <sup>th</sup> Frazier		Teaching Duration:	10 Lectures
1.1	Food as a substrate for microorganisms		
1.2	Principles of food preservation:		
	1.2.1	Asepsis	
	1.2.2	Removal of microorganisms	
	1.2.3	Heat treatments employed in processing foods	
	1.2.4	Temperatures employed in low-temperature storage	
	1.2.5	Methods of drying	
	1.2.6	Added preservatives	
	1.2.7	Developed preservatives	
	1.2.8	Preservation by radiation	

UNIT 2		FOOD SPOILAGE	
Reference: 4 <sup>th</sup> Frazier		Teaching Duration:	10 Lectures
2.1	Contamination and Spoilage of food		
	2.1.1	Bread	
	2.1.2	Vegetables and fruits	
	2.1.3	Heated/canned foods	
2.2	Food borne diseases	(Prescott)	
2.3	Detection of food-borne pathogens	(Prescott)	
2.4	The HACCP System and Food safety : Outline	(James Jay)	

UNIT 3		DAIRY MICROBIOLOGY	
Reference: Sukumar De		Teaching Duration:	10 Lectures
3.1	Definition		
3.2	Indian standards		
3.3	Composition and nutritive value of milk		
3.4	Contamination and Spoilage of milk and milk products	(Frazier)	
3.5	Preservation of milk and milk products	(Frazier)	
3.6	Fermented milks	(Prescott)	
3.7	Cheese production	(Prescott)	
3.8	Probiotics	(Prescott)	

UNIT 4		MICROORGANISMS AS FOOD AND FERMENTED FOODS	
Reference: 9 <sup>th</sup> Prescott		Teaching Duration:	10 Lectures
4.1	Single cell protein	(Purohit)	
4.2	Mushroom Culture	(R.C.Dubey)	

- 4.3 List of fermented foods
- 4.4 Production of alcoholic beverages
- 4.5 Production of breads

### MB:18PRINCIPLESOFFERMENTATIONTECHNOLOGY

Course Code	<b>MB:18</b>
Course Title	<b>PRINCIPLESOFFERMENTATIONTECHNOLOGY</b>
Credit	2
Teaching per Week	2
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)
Effective From	2020 -2021
Purpose of Course	Make students learn to know about the principles of fermentation technologies.
Course Objective	Students learn about fermentation process and also learn about fermenter uses in industries.
Course Outcomes	CO1:Students come out with sound knowledge of fermentation in industries with designing of fermenters which make them compete for their job at industries. CO2:Students will learn about basic downstream process for product extraction.

### MB19: ECONOMIC MICROBIOLOGY

Course Code	<b>MB19</b>						
Course Title	ECONOMIC MICROBIOLOGY						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	2020 – 2021						
Purpose of Course	Students know about how the organisms can be utilized for the production of different enzymes, antibiotics and how it can be used in various fields.						
Course Objective	They learn about the fermentation process and learn about the use of organisms in Agriculture in fuel fields and in remediation.						
Course Outcomes	<p>CO1: Students are able to join industries where microorganisms are utilized for enzymes, antibiotic or fuel production.</p> <p>CO2: Students will learn about basic techniques related to bioremediation and bioleaching.</p>						
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6

**MB20:BIOINFORMATICS**

Course Code	<b>MB20</b>						
Course Title	<b>BIOINFORMATICS</b>						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	2020 – 2021						
Purpose of Course	To make the students aware about coputer techniques and uses for structure prediction and phylogenecity						
Course Objective	Students learn about different types of databases To study the bioinformatics tools for structural prediction and phylogenecity						
Course Outcomes	CO 1: students having knowledge of databases CO 2: learn bioinformatics tools and its use in future purpose.						
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6
	CO1						
	CO2						
Pre-requisite	Basic Science

### MB21:CLINICALMICROBIOLOGY

Course Code	<b>MB21</b>																																																																	
Course Title	<b>CLINICALMICROBIOLOGY</b>																																																																	
Credit	2																																																																	
Teaching per Week	2																																																																	
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)																																																																	
Effective From	2020 – 2021																																																																	
Purpose of Course	Make students aware about how to handle various clinical samples they are also learn about basic health care system and basic chemotherapy for bacterial and viral disease.																																																																	
Course Objective	They know basic study about healthcare. They learn about handling and examination of samples in laboratories. They also know basic chemotherapy for bacterial and viral disease																																																																	
Course Outcomes	CO 1: Students are sound in their clinical microbiology knowledge which help them in their health care.  CO 2: Student learn about pathogenecity of urine, semen and fecal specimen																																																																	
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6

**MB22: HAEMATOLOGY**

Course Code	<b>MB22</b>						
Course Title	<b>HAEMATOLOGY</b>						
Credit	2						
Teaching per Week	2						
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)						
Effective From	June 2020						
Purpose of Course	Students learn about basic biology of blood with its different properties and various methods for detection of blood grouping and blood banking						
Course Objective	Students come to know basics of blood banking and practical skills of Haematology.						
Course Outcomes	CO 1: Students are having knowledge of blood banking and they have an opportunity to get job in the centre like Medical Laboratory. CO 2: to learn about blood donor and recipient fiesiability						
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6
	CO1						
	CO2						
Pre-requisite	12 <sup>th</sup> Science with Biology Subject						

Course Content

UNIT 1		INTRODUCTION TO HAEMATOLOGY	
Reference: Mukherjee		Teaching Duration:	10 Lectures
1.1	Blood: Definition and functions		
1.2	Components of blood and their function		
1.3	Haemopoietic system of the body		
1.4	Collection and processing of blood		(Ochei)
1.5	Use and types of anticoagulants		(Godkar)
1.6	haemostasis and mechanism of blood coagulation		
1.7	Anaemia, leukemia and polycythaemia vera		

UNIT 2		PRACTICAL HAEMATOLOGY	
Reference: Mukherjee		Teaching Duration:	10 Lectures
2.1	Determination of haemoglobin concentration		
2.1.1	Cyanmethaemoglobin method		
2.2	Determination of haematocrit - PCV		
2.3	Enumeration of formed elements		(Ochei)
2.4	Laboratory investigations of bleeding disorders		
2.4.1	Bleeding time-Ivy method		
2.4.2	Whole blood clotting time-Lee and White method		
2.4.3	Prothrombin time		

UNIT 3		IMMUNOHAEMATOLOGY	
Reference: Ochei		Teaching Duration:	10 Lectures
3.1	Blood group antigens and antibodies		
3.2	ABO blood grouping system		
3.3	ABO grouping		
3.4	ABO grouping methods		
3.5	Rh grouping system		
3.6	Methods for Rh typing		

UNIT 4		BLOOD BANKING	
Reference: Mukherjee		Teaching Duration:	10 Lectures
4.1	Selection of blood donor		
4.2	Methods of blood collection –preparation of blood drawing		
4.3	Adverse reaction of donor		
4.4	Preparation and use of blood components		
4.5	Basic laboratory tests-Cross matching

PRACTICALS

Course Code	<b>MBP06</b>								
Course Title	Practicals								
Credit	6								
Teaching per Week	12								
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)								
Effective From	2020- 2021								
Purpose of Course	Students learn about Food and Dairy Microbiology, Fermentation process, Economic Microbiology, Clinical Microbiology and Haematology.								
Course Objective	Microbiology is practical based course so main objective of this course is to acquaint students about how to isolate, enrich and observe bacteria by learning basic fundamental techniques								
Course Outcomes	<p>CO1-CO4: Students will learn about Bacteriological investigation of diagnostic problems related to blood, urine, stool, purulent exudates, wound and abscess.</p> <p>CO5-CO8: Students will be able to Determine the activity of Antibiotic Susceptibility, MIC of antibiotic and bacteriological analysis of milk and food.</p> <p>CO9-CO11: Students will be able to learn about fermentative product and bioassay of enzyme.</p> <p>CO12-CO15: Students will be able to know about total count of RBC and WBC as well as hemoglobin count including differential count of leucocytes.</p> <p>CO16: Students will be able to learn about separation of amino acid by chromatography method.</p> <p>CO17: Students will be able to learn about Physical, chemical and microscopic examination of urine.</p>
