Experiment for Learning:

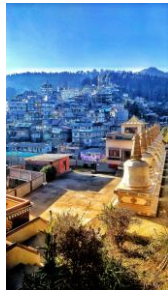

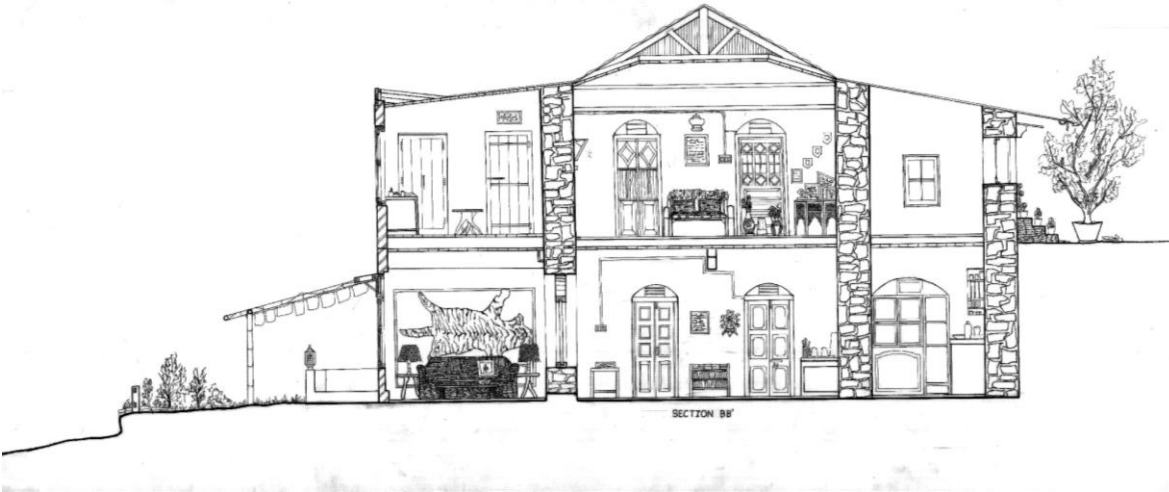

As a part of the study in the RSP an experiment was conducted to develop an understanding in the students that all the elements used in the olden housing systems were designed for necessary purpose and not only as a medium of ornamentation. the niches commonly seen in old houses is used for lighting up the space and thus is placed at a particular level so that the light spreads evenly. for this experiment the niches were lighted up with candles and the whole space lit up proportionately. By conducting this experiment it was easy for the students to relate and understand the use and form of any kind of elements used in the past.

2017 MCLEODGANJ & DHARAMSHALA.

2018 KALIMPONG, WEST BENGAL.
