M.Sc. Industrial Mathematics

Scheme of teaching and examination

Semester – I

Subject Code	Subject	Scheme Of Teaching			Scheme Of Examination					
		L	P	Total	Th.		Pr.		Total	
					Int	ext	Int	Ext	Int	Ext
IM – 101	Real Analysis	4	--	4	30	70	--	--	30	70
IM – 102	Ordinary Differential Equations	4	--	4	30	70	--	--	30	70
IM – 103	Linear Algebra	4	--	4	30	70	--	--	30	70
IM – 104	Advanced Numerical Techniques	4	--	4	30	70	--	--	30	70
IM – 105	Mechanics	4	--	4	30	70	--	--	30	70
IM – 106	Programming Language	4	4	8	18	42	12	28	30	70
	Total	24	04	28	168	392	12	28	180	420

Semester – II

Subject Code	Subject	Scheme Of Teaching			Scheme Of Examination					
		L	P	Total	Th.		Pr.		Total	
					Int	ext	Int	Ext	Int	Ext
IM – 201	Complex Analysis	4	--	4	30	70	--	--	30	70
IM – 202	Partial Differential Equations	4	--	4	30	70	--	--	30	70
IM – 203	Functional Analysis	4	--	4	30	70	--	--	30	70
IM – 204	Numerical Linear Algebra	4	--	4	30	70	--	--	30	70
IM – 205	Design and Analysis of Algorithm	4	--	4	30	70	--	--	30	70
IM – 206	Object Oriented Programming with C++	4	4	8	18	42	12	28	30	70
	Total	24	04	28	168	392	12	28	180	420

Semester – III

Subject Code	Subject	Scheme Of Teaching			Scheme Of Examination					
		L	P	Total	Th.		Pr.		Total	
					Int	ext	Int	Ext	Int	Ext
IM – 301	Applied Statistics	4	--	4	30	70	--	--	30	70
IM – 302	Integral Equation	4	--	4	30	70	--	--	30	70
IM – 303	Optimization	4	--	4	30	70	--	--	30	70
IM – 304	Fluid Dynamics	4	--	4	30	70	--	--	30	70
IM – 305	Modeling and Simulation	4	--	4	30	70	--	--	30	70
IM – 306	File Organization and Database Systems	4	4	8	18	42	12	28	30	70
	Total	24	04	28	168	392	12	28	180	420

Semester – IV

Subject Code	Subject	Scheme Of Teaching			Scheme Of Examination					
		L	P	Total	Th.		Pr.		Total	
					Int	ext	Int	Ext	Int	Ext
IM – 401	Image Processing	4	--	4	30	70	--	--	30	70
IM – 402	Wavelet Analysis	4	--	4	30	70	--	--	30	70
IM – 403	Digital Signal Processing	4	--	4	30	70	--	--	30	70
IM – 404	Computational Fluid Dynamics	4	--	4	30	70	--	--	30	70
IM – 405	Neural Network	4	--	4	30	70	--	--	30	70
IM – 406	Mathematical Software	4	4	8	18	42	12	28	30	70
	Total	24	04	28	168	392	12	28	180	420

IM 1 01: Real Analysis

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	0

Prerequisite

The extended real numbers, Borel sets.

Lebesgue measure

Introduction, outer measure, measurable sets and Lebesgue measure, A non measurable sets, measurable function, Littlewoods's three principles.

Lebesgue integral

The Riemann integral, The Lebesgue integral of a bounded function over a set of finite measure, The integral of a non negative function, The general Lebesgue integral, Lebesgue convergence theorem, monotone convergence theorem, Fatau's lemma, generalized Lebesgue convergence theorem

Differentiation and integration

Differentiation of monotone functions, and functions of a bounded variation. Differentiation of an integral, absolute continuity, convex functions.

IM 102: Ordinary Differential Equations

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	0

- Mathematical modeling by means of ordinary differential equations
- Reduction of nth order equation into first order systems
- Existence and uniqueness of solution of a nonlinear system of ordinary differential equations, Lipschitz condition, Gromwell's lemma.
- Phase plane Analysis
- Linearization of nonlinear systems
- Autonomous and non-autonomous linear system Theory: Linear Dependence and independence of solution, Wronskian.
- Transition matrix (fundamental matrix) for a linear system, solution of a nonlinear system by variation of parameters method, computation of transition matrix , eigenvalue method, Peano-Backer series method.
- Discrete dynamical systems
- Stability of dynamical systems, Lyapunov, exponential and asymptotic stability and their characterization.
- Sturm -Liouville equations, Eigenvalue problems

4. Saber N. Elaydi: An introduction to Differential Equations, Springer-verlag, Second edition, 1995
5. Arnold V.I: Ordinary Differential Equations, Prentice- Hall of India,

IM 103: Linear Algebra

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	0

Linear operator

Functions linear operators, null space and range, rank and nullity theorem, operator inverses, application to matrix theory, computation of null space and range of a matrix, matrix of an operator, change of basis and similar matrices.

Inner product spaces

Basics of inner product space, orthogonal sets fourier coefficients and partial identity gram-schmidt process QR factorization, approximation and orthogonal projection, equivalence of the problems, normal equations projection operators, orthogonal complements, applications to an approximations and matrix theory fredholm alternative theory, matrix representation of an inner products, orthogonal change of bases, rank of gram matrix

References:

IM 104: Advanced Numerical Techniques

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	0

- Computer Arithmetic: Floating point numbers and round off errors, Absolute and relative errors.
- Polynomial Interpolation: Hermit's interpolation formula with error analysis, Richardson interpolation, splines and spline interpolation, Aitken extrapolation
- Numerical differentiation, Gaussian quadrature, Romberg integration, adaptive quadrature
- Solution of system of Linear equations:
 - Matrix inversion, Jordan's method.
 - The LU and Cholesky factorizations
 - Pivoting and constructing an algorithm based on Gaussian elimination method
 - Solution of equations by iterative methods (Jacobi's method, Gauss-Seidel method)
- Algebraic Eigen value problem :
- Properties of eigen values and eigen vectors
- Power method
- Inverse power method
- Jacobi's method, Given's method
- Schur and Gershgorins theorem
- Numerical Solution of ODE: single step method-Runge Kutta methods, Multistep method - Milne Simpson's method.
- System of non linear equations: Newton Raphson's method

References:

4. M.K. Jain: Numerical analysis for scientists and Engineers, New Age International Ltd. Publishing, 1992

IM 105: Mechanics

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	0

FUNDAMENTALS OF PHYSICS

- Measurement
- Motion in one dimension: Displacement, Velocity, Acceleration, Equation of motion with constant acceleration.
- Motion in two dimension and three dimensions: Displacement, Velocity, Acceleration, Projectile Motion, Uniform circular motion, Relative motion in two and three dimension
- Newton Laws of motion (with examples), Friction and centripetal forces
- Kinetic energy and work ,Work done by weight, Work done by variable force, Work-kinetic energy theorem, Work done by spring force, Power, Potential energy and conservation of energy, Electric potential energy, Gravitational potential energy, Conservation of energy
- System of particles: Newton Laws for system of particle, Linear Momentum and Newton's second Law, Conservation of linear momentum, collision, Impulse and linear momentum, Elastic and Inelastic collision in one dimension, Collision in two dimension
- Rotational motion: Angular displacement, Angular velocity and Angular acceleration, Equation of motion for constant angular acceleration, Torque, Newton second law in angular form
- **Oscillations and wave theory**
- Oscillations: Energy, SHM, Energy in SHM, damped simple harmonic motion, forced oscillations and resonance, Simple pendulum
- Waves: Types of waves, wavelength, frequency, period, angular frequency, Superposition of waves
- **Heat and Thermodynamics**
- Thermodynamics : Zeroth Law of Thermodynamics
- The Celsius, Kelvin and Fahrenheit scales
- Thermal expansion: Linear expansion and volume expansion
- Specific heat
- First law of Thermodynamics
- Conduction, convection, radiation
- Kinetic theory of Gases and second law of Thermodynamics: Ideal gases, Internal energy, the Adiabatic expansion of an ideal gases, Entropy, Second law of thermodynamics, Entropy in the real world, Engines, Refrigerators

Reference Books:

1. D. Halliday, R. Resnick and J. Walker, Fundamentals of Physics, Sixth edition, John Wiley and Sons, New York, 1998.
2. J.B. Serway, Fundamental of Physics

IM 106: Programming Language

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - I w.e.f. June 2010-11

L	T	P
4	1	4

Introduction

Algorithms and Flowchart, Types of Languages, Introduction to C Language

C Fundamentals

Identifiers, Data Types, Constants and Variables, Arrays

Operators and Expressions

Arithmetic Operators, Unary Operators, Relations Operators, Logical Operators
Assignment Operators, Conditional Operators, Library Functions, Expressions, Evaluation of
Expression

Data Input and Output

Single Character input and output, The scanf function, The printf function, Gets and Puts
functions

Control statements

The While Statement, do-while statement, for statement, if – else statement, switch
statement, break statement, continue statement, goto statement

Functions

Introduction to functions, Function definition, Accessing function, Passing arguments to
function, Recursive function

Arrays

Defining an array, Processing an array, Multi dimensional arrays, Passing array to a
function, Arrays and Strings

Structures and Unions

Defining a structure, Processing a structure, Unions

Reference Books

1. C programming Language – karnighan & Ritchie – TMH
2. 'C' Odyssey 6th Volume – Vijay Mukhi – PHI
3. Programming in 'C' – Stephan Kochan – CBS
4. Mastering turbo C- Kelly and Bootle – BPB
5. C language Programming Byron Gottfried – TMH

IM 201: Complex Analysis

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L	T	P
4	1	0

Complex Numbers:

Definition of Complex Numbers, Square roots, Geometric interpolation, rational powers of a Complex Numbers, Topology of the complex plane, Sequence **and** series.

Analytic Functions:

Functions, limits and continuity, differentiability Power series as an analytic function, Exponential and Trigonometric functions, Complex logarithms, Inverse functions, Zeros of analytic functions.

Complex Integration:

Curves in the complex plane, Basic properties of complex Integral, winding number or index of a curve, Cauchy-Goursat Theorem, Homotopy version of Cauchy's theorem, Morera's theorem, Cauchy Integral Formula, Laurent series, The maximum modulus principle.

References:

1. S. Ponnuswamy, foundation of complex analysis, Narosa publishing house, 1997.
2. S. Lang, Complex Analysis, Addison Wesley, 1997.
3. J. N. Sharma, Functions of a Complex Variable, Krishna Prakashan, 2000.
4. H. A. Priestly, introduction to complex analysis, Clarendon Press, 1990.
5. J. B. Conway, Functions of one complex variable, Springer-Verlag, 1980.

IM 202: Partial Differential Equations

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L	T	P
4	1	0

- Introduction to PDE, Modeling Problems related to PDE.
- General PDE, Classification of PDE -hyperbolic, elliptic and parabolic PDE
- Boundary conditions, well-posed problem, The Cauchy-Kowalewski theorem for existence and uniqueness of solutions to PDE
- **Hyperbolic PDE**
 - Scalar first order Partial differential equations, Characteristics, Charpit's method, Weak Solutions., Quasi-linear first order equations and quasi-Linear systems of partial differential equations, weak solutions, shocks and rarefactions, Burgers equation, non-uniqueness and entropy conditions, Wave equation
- **Elliptic PDE**
 - Solution of Laplace equation using separable variable technique, Fundamental solution, Mean value theorem., Strong Maximum Principle, uniqueness and regularity, Energy Methods, Sobolov spaces and Lax-Milgram lemma.
- **Parabolic PDE**
 - Solution of Heat equation using Fourier Transform method, Mean Value Theorem, Maximum Principle, Regularity, Uniqueness, Semi group approach

Reference Books:

1. Strauss W. A: Partial differential equations, An Introduction, Wiley, John and sons 1992.
2. Renardy and Rogers: An introduction to PDE's, Springer-Verlag, 1999.
3. Smoller: Shock Waves and reaction-diffusion equations, second edition, 1994.
4. Kevorkian: Partial Differential equations, Wadsworth and Brooks/ cole
5. F.John: Partial differential equations

IM 203: Functional Analysis

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L	T	P
4	1	0

Metric space:

Metric space, Examples of Metric Space, Completion of metric space.

Normed Spaces and Banach Spaces

Vector Space, Normed Space, Banach Space, Further properties of Normed spaces, Finite Dimensional normed space and subspaces, Compactness and finite dimension, Linear operators, Bounded and continuous linear operators, Linear functional, Linear operators, Bounded and Continuous Linear Operators, Linear functional Linear Operators and Linear functional on a Finite dimensional spaces, Normed spaces of operators, Dual spaces

Inner Product Spaces, Hilbert Spaces

Inner Product space, Hilbert space, Properties of Inner product Space, Orthogonal compliments and direct sums, Orthonormal sets and sequences, Series related to Orthonormal sequences and sets'

References:

4. J.N. Sharma & A Vashistha: Functional Analysis.

IM 204: Numerical Linear Algebra

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L T P
4-1-0

Vector and Matrix Norms:

Vector Norms, Matrix Norms, Convergent Matrices, Stability of Nonlinear Systems,

Iterative Methods and Condition Number

Introduction, Gauss-Jacobi Iteration Method, Gauss-Seidel Iteration Method, Convergence of Iteration Methods, Successive Over-Relaxation Iteration Method, Conjugate Gradient Method, Definition and Examples, Elementary Properties of $k(A)$, Sensitivity Analysis of Solutions of Linear Systems,

Numerical Eigenvalue Problem

Basic Theorem on Eigenvalues and Eigenvectors, Power Method, Power Method Algorithm, Rate of Convergence, Power Method with shift, Simple application of power method with shift, Calculating the least Dominant Eigenpair, Inverse Iteration, Rayleigh Quotient, Householder Deflation, Jacobi's Method, Rotation Matrices, The Outline of Jacobi's Method, The General Step of Jacobi's Method, Zeroing out d_{pq} and d_{qp} , QR Method, Hessenberg QR Method, Rate of Convergence of the hessenberg QR Method, Single Shift Hessenberg QR Method.

IM 205: Design & analysis of Algorithm

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L	T	P
4	1	0

- Logic

Propositional and predicate logic, propositions, predicates and quantifiers, quantifier and logical operators, rules of inference, methods of proof and logical verification of computer programs.

- Theory of algorithms

Problems and instances algorithms, characteristics of algorithms, concepts of test data, efficiency of algorithms, theoretical, empirical and hybrid approaches to measure efficiency, time complexity, space complexity, asymptotic notations, solving recurrences using characteristics equations, examples of simple algorithm and their analysis

- Graph theoretic algorithms and computer programs

Recap the concepts and definitions of graph and trees as data structure , some basic algorithms, representation of graphs, breath first search, topological search, heap sort algorithm connectedness and assumptions, Lattice theory, Boolean algebra

IM 206: Object Oriented Programming

With C++

Syllabus to be offered at M. Sc. Industrial Mathematics Sem - II w.e.f. June 2010-11

L	T	P
4	1	4

Principles of object oriented Programming

Procedure oriented Programming Vs object Oriented Programming, Benefits of Object oriented Programming

Classes and Objects

Constructions and Destructions

Operators Overloading, Functional Overloading and Type Conversions.

Inheritance

Pointers:

Basis of Pointers, Pointer Arithmetic, Pointer Array, Call by reference in user defined functions, Pointer to function

Files:

Reading and writing from a file, Reading and writing Structures, Random accessing a file

IM 301: Applied Statistics

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L	T	P
4	1	0

- **Probability :**

Basic concepts, Sample space, Discrete probability ,Simple theorems on probability, Independence of events, Bayes theorem. Discrete and continuous random variable, Binomial, Poisson and Normal distributions, expectation and moments, Chebyshev's inequality, central limit theorem.

- **Statistics:**

Data analysis , measures of central tendency, measures of dispersions, curve fitting, regression, correlation, chi-square test of goodness of fit, contingency tables, confidence interval for mean , variance.

IM 302: Integral equations

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L	T	P
4	1	0

Variational problems with fixed boundary

The concepts of variational parameter, and its properties, variational forms of functional form, function depends on Higher order derivatives, functionals dependent on function of several independent variables, variational problem in parametric forms, application to the problems of mechanics, variational problems leading to an integral equation or differential difference equations, theorem of Dubois' Reymond stochastic calculus of variation,

Variational problem with moving boundary

Functional of the form $I(y(x)) = \int_{x_1}^{x_2} F(x, y, y') dx$, variational problem with a moveable boundary

for a functional dependent on two function, one sided variation, reflection and refraction of extremals, diffraction of light rays

IM 303: Optimization

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L	T	P
4	1	0

- Optimization problems in engineering and industries
- Optimization problem formulation
- Classification of optimization problem
- Classical optimization techniques : Single variable optimization, Multivariable optimization, Constraint optimization, Lagrangian multiplier method, Khun-Tucker conditions
- Single variable optimization techniques:
 - Bracketing method - Exhaust search
 - Region elimination method - Interval halving method, Golden section method
 - Interpolation method - Quadratic interpolation method
 - Gradient base methods - Newton-Raphson method, bisection method
- Multivariable optimization techniques:
 - Univariate method
 - Constraint linear optimization problem
 - Overview of linear optimization problem
 - Quadratic programming - Wolf's modified simplex method, Bailes methods
 - Integer programming problem - Gomory's cutting plane method, branch and bound techniques

**DEPARTMENT OF MATHEMATICS,
VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT.**

IM 304: Fluid Dynamics

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L	T	P
4	1	0

- Vectors and Tensors:
- Flow Kinematics
- Flow descriptions (Lagrangian, Eulerian, Material derivative)
- Motion of Fluid particles(rate of dilation, rate of shear, rate of rotation)
- Conservation Laws
- Reynold's transport theorem
- Conservation of mass
- Conservation of momentum
- Conservation of energy
- Navier-stokes equation
- Non dimensionalization of the Navier-stokes equation
- Special form of conservation laws
- Euler equation for inviscid gas dynamics
- Parabolic boundary condition for N S equation
- Potential equation
- Laplace Equation for irrotational flows
- Incompressible inviscid irrotational flows
- Velocity potential and stream function in 2d and 3d
- Simple planer flows
- Incompressible Viscous flows

Reference Books:

1. Batchelor G.K.: An Introduction to Fluid Dynamics, Cambridge University Press,1999.
2. Emanuel G: Analytical Fluid Dynamics, CRC Press, Boca Raton, Second Edition, FL, 1999.

4. Currie I.G.: Fundamental Mechanics of Fluids, McGraw-Hill, New-york, 1993.
5. Chorin: Mathematical introduction to Fluid Mechanics, Springer Verlag, Fourth Edition

IM 305: Modeling & Simulation

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L	T	P
4	1	0

- Needs and Techniques of mathematical modeling: Idea of mathematical modeling, need for mathematical modeling, steps in mathematical modeling, Characteristics of mathematical modeling ,Interpretation
- Models in mechanical vibration :Spring mass system, pendulum problems
- Models in population dynamics:One species model, logistic model, growth model in time delays ,Predator-Prey models,Volterra-Lotka models
- Models of chemical processes, Electrical network and Diffusion processes
- Traffic flow models

COMPUTATIONAL MODELING

- Modeling dynamical systems: differential equations and their numerical solution, linear and non-linear dynamics, stability, convergence, attractors.
- Physical systems: System types and characteristics behaviour, Continuous-time,discrete – time and discrete -event systems, linear and non linear systems
- Exploration of behaviour through simulation:

Developing simulations of dynamical systems using Matlab: representation and visualization of simulation experiments, analyzing behavioural characteristics for a range of classes of physical and computational systems eg. Predictor- prey models, evolutionary systems and cellular systems

Reference Books:

1. J.N.Kapur: Mathematical modelling, Wiley eastern Ltd., 1994.

IM - 306 File Organizations and Database System

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -III w.e.f. June 2011-12

L T P
4 1 4

- Streams and Files
- Advantages of streams
- Stream class hierarchy
- The ios class
- The istream class
- The ostream class
- Stream errors
- Disk file I/O with stream
- File pointers
- Error handling in file
- File I/O with member function
- Overloading the extraction and insertion operators
- Memory as a stream objects
- Command line argument
- Creating Multi file programs

Reference:

1. C Programming Language - Karnighan & Ritchie - THM
2. 'C' Odyssey 6th Volume - Vijay Mukhi - PHI
3. Programming in 'C' - Stephen Kochan - CBS
4. Mastering Turbo C - Kelly and Bootle - BPS
5. C language Programming Byron Gottfried - THM

IM - 401 Image Processing

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	0

Image Formations and Representation

Introduction, Image formation, Illumination, Reflectance Models, Point Spread Function, Sampling and Quantization, Image Sampling, Image Quantization, Binary Image, Geometric Properties, Chain code representation of a binary object, Three-Dimensional Imaging, Stereo Images, Range Image Acquisition, Image file formats

Colors and Color Imagery

Introduction, Perception of Colors, Color Space Quantization and Just Noticeable Difference, Color Space and Transformation, CMYK, NTSC or YIQ Color, YCbCr Color, Perceptually Uniform Color, CIELAB color, Color Interpolation or Demosaicing, Nonadaptive Color Interpolation Algorithms, Adaptive algorithms, A Novel Adaptive Color Interpolation Algorithm,

Image Transformations

Introduction, Fourier Transforms, One-Dimensional Fourier Transform, Two-Dimensional Fourier Transform, Discrete Fourier Transform (DFT), Transformation Kernels, Matrix Form Representation, Properties, Fast Fourier Transform, Discrete Cosine Transform, Walsh-Hadamard Transform (WHT), Karhunen-Loeve Transform or Principal Component Analysis, Covariance Matrix, Eigenvectors and Eigenvalues, Principal Component Analysis, Singular Value Decomposition

References:

IM - 402 Wavelet Analysis

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	0

- From Fourier Analysis to Wavelet analysis
- Time Frequency Analysis
- Continuous Wavelet Transform
- Discretizing the Wavelet Transform
- Frames
- Frames of Wavelets
- A necessary condition (Admissibility of the mother wavelet)
- The dual frame
- Examples of Tight frames, The Mexican hat function, a modulated Gaussian
- Frames for the Windowed Fourier transform
- Time-Frequency Density
- Orthonormal Wavelet bases
- Multi Resolution Analysis
- Riesz bases of scaling function
- The Battle-Lemaire wavelets
- Regularity of Orthonormal wavelet bases
- Orthonormal Bases of Compactly Supported Wavelets with Examples
- Regularity of Compactly Supported Wavelets

References:

IM 403: Digital Signal Processing

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	0

INTRODUCTION:

DISCRETE-TIME SIGNALS AND SYSTEMS:

Introduction, Discrete-Time Signals: Sequences, Discrete-Time systems, Linear Time-Invariant Systems, Properties of Linear Time-Invariant Systems, Linear Constant-Coefficient Difference Equations, Frequency-Domain Representation of Discrete-Time Signals and Systems, Representation of Sequences by Fourier Transforms, Symmetry Properties of the Fourier Transform, Fourier Transform Theorems, Discrete-Time Random Signals.

THE Z-TRANSFORM:

Introduction, Z-Transform, Properties of the Region of Convergence for the Z-Transform, The Inverse Z-Transform, Z-Transform Properties.

SAMPLING OF CONTINUOUS - TIME SIGNALS:

Introduction, Periodic Sampling, Frequency-Domain Representation of Sampling, Reconstruction of a Bandlimited Signal from its Samples, Discrete-Time Processing of Continuous-Time Signals, Continuous-Time Processing of Discrete-Time Signals, Changing the Sampling Rate Using Discrete-Time Processing, Multirate Signal Processing, Digital Processing of Analog Signals, Oversampling and Noise Shaping in A/D and D/A Conversion.

IM 404: Computational Fluid Dynamics

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	0

- Introduction to CFD, Applications;
- Governing equations and assumptions, Equation types, Model equations, potential flow, Heat conduction, Wave equation, Burgers equation, Euler equations.
- Finite Differences, Algorithms, Errors and Accuracy, Consistency, Stability and Convergence, Finite Volumes, Explicit algorithms, Implicit algorithms, Numerical boundary conditions, Method of lines, Shock Jump Relations, Shock capturing.
- One dimensional Euler equations, Lax – Wendroff Scheme, Mc-Cormack Scheme, Implicit - method, Pseudo One Dimensional Euler Equations, boundary conditions, Flux – Splitting, Artificial viscosity, Flux limiters.
- Multidimensional Euler equations, Lax- Wendroff and Mc-Cormack schemes, stability of multidimensional schemes, Operator splitting Implicit algorithms, Beam - Warming algorithm.
- Practicals : Numerical methods for discretizing fluid flow equations: Finite differences, finite element and finite volume method.

IM 405: Neural Network

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	0

Definition and brief history of artificial neural networks.

- Structure and function of a Single Neuron, Biological Neuron and artificial Neuron Models
- Architectures and Neural Networks:
 - Fully connected
 - Layered networks
 - Feed forward
 - A cyclic and modular networks
- Supervized and Unsupervised networks
- Learning Algorithms:
 - Correlation learning
 - Competitive learning
 - Hebbian rule
 - Perceptron rule
 - Delta rule
 - Back propagation algorithm.
- Hopfield Networks
 - Continuous and Discrete
 - Energy function and its properties
 - Capacity of Hopfield Networks.

IM 406: Mathematical Software

Syllabus to be offered at M. Sc. Industrial Mathematics Sem -IV w.e.f. June 2011-12

L	T	P
4	1	4

Introduction

Introduction to Matlab, variable and array, subarrays, displaying output data, data files operation on array, hierarchy of operation on array, built in function in Matlab

Plotting

Introduction to plotting, graph window, two dimensional plot, multiple plot, components of graph(legend, title,), graphical image, comment, 3D graph, additional plotting features
Subplots, polar plots,

Branching statement and program design

The if construct, switch construct, The try-catch construct , relational operators, logic operators, logical functions

Loops

The while loop, The for loop, The break and continue statements, Nesting loops.

User defined function

Introduction to Matlab functions, variable passing in Matlab(pass by value), preserving data between calls to functions, sub functions, private function, nested function

Practical based on image processing, wavelet, digital signal processing, neural network
