

# Paper – 104 Computer Programming & Programming Methodology

## (CPPM)

<b>Course Code:</b>	<b>104</b>
<b>Course Title:</b>	<b>Computer Programming &amp; Programming Methodology (CPPM)</b>
<b>Total Credits :</b>	4 Credits
<b>Nature of Subject :</b>	Theory and Practical application
<b>Teaching per Week:</b>	4 Hours per week per Semester
<b>Minimum weeks per Semester:</b>	15 weeks (Including class work, examination, preparation etc.)
<b>Review/Revision Year:</b>	June, 2020
<b>Purpose of Course :</b>	<ul style="list-style-type: none"> <li>- Computer programming (often shortened to programming) is a process that leads from an original formulation of a computing problem to executable computer programs.</li> <li>- Programming involves activities such as analysis, developing, understanding, generating algorithms, verification of requirements of algorithms including their correctness, and implementation (commonly referred to as coding) of algorithms in a target programming language.</li> <li>- Students pursuing their Graduation program will encounter their first programming language which is one of the pioneer computer programming languages.</li> <li>- Purpose of the course is to emphasis on concepts of Compiler based programming language, structure of code, algorithms, flow-charts, problem solving attitude, concepts of variables and declaration mechanism of different datatypes, simple I/O statements, conditional statements, loops, compound iterations, strings and certain inbuilt functions, header files, concepts of arrays and one dimensional numeric array operations, numeric inbuilt functions and concepts of pointers.</li> </ul>
<b>Objective :</b>	Object of this course is to introduce students the essentials of computer Programming and programming methodology using C language.
<b>Pre-requisite:</b>	None
<b>Course Outcome :</b>	<ul style="list-style-type: none"> <li>- Students will be able to formulate a computing problem to executable computer program using C language.</li> <li>- Understand about compiler based programming languages.</li> <li>- Concepts of variables, literals, data types, conversions of data types, input and output data and processing of data, inbuilt functions, arrays, header files, conditional and iterative statements.</li> </ul>
<b>Course Content:</b>	<p><b><u>UNIT-1:</u></b> Introduction</p> <p>1.1 Concepts of Programming Language</p> <p style="padding-left: 20px;">1.1.1 Introduction of Source Code, Object Code and executable code</p> <p style="padding-left: 20px;">1.1.2 Algorithm and Flowchart</p> <p style="padding-left: 20px;">1.1.3 Concepts of Structured Programming Language</p> <p>1.2 Concepts of Editor, Interpreter and Compiler</p> <p style="padding-left: 20px;">1.2.1 Introduction of C program body structure</p> <p style="padding-left: 20px;">1.2.2 Character Set, concepts of variables and constants</p> <p style="padding-left: 20px;">1.2.3 Identifiers, literals, Key words</p> <p style="padding-left: 20px;">1.2.4 Data types (signed and unsigned) (Numeric : int, short int, long, float, double) , (Character type: char, string) and void.</p> <p style="padding-left: 20px;">1.2.5 Concepts of source code, object code and executable code.</p>

**UNIT-2:** Input/Output Statements and Operators:

2.1 Input/Output statements:

2.1.1 Concepts of Header files (STDIO, CONIO)

2.1.1.1 Concepts of pre-compiler directives.

2.1.1.2 Use of #include and #define

2.2 Input/Output Statements:

2.2.1 Input statements : scanf(),getc(), getch(), gets(), getchar()

2.2.2 Output Statements: printf(), putc(), puts(), putchar()

2.2.3 Type specifiers (formatting strings) : %d, %ld, %f, %c, %s, %lf

2.3 Operators :

2.3.1 Arithmetic operators ( +, -, \*, /, %, ++, --, )

2.3.2 Logical Operators ( &&, ||, ! )

2.3.3 Relational Operators ( >, <, ==, >=, <=, != )

2.3.4 Bit-wise operators ( &, |, ^, <<, >> )

2.3.5 Assignment operators ( =, +=, -=, \*=, /=, %= )

2.3.6 Ternary Operator and use of sizeof() function.

2.4 Important Built-in functions:

2.4.1 Use of <string.h> : ( strlen, strcmp, strcpy, strcat, strcmp )

2.4.2 Use of <math.h> : (abs(), floor(), round(), ceil(), sqrt(), exp(), log(), sin(), cos(), tan(), pow() and trunc())

**UNIT-3:** Decision Making statements :

3.1 if statements :

3.1.1 simple if statements

3.1.2 if...else statements

3.1.3 if...else if...else statements

3.1.4 Nested if statements.

3.2 Switch..case statements

3.2.1 Use of break and default

3.2.2 Difference between switch and if statements.

**UNIT-4:** Iterative statements :

4.1 Use of goto statement for iteration

4.2 while loop

4.3 do..while loop

4.4 for loop

4.5 Nested while, do..while and for loops

4.6 Jumping statement: (break and continue)

**UNIT-5:** Concepts of Arrays and pointer

5.1 Concepts of Single-dimensional Array

5.1.1 Numeric single dimensional Array

5.1.2 Numeric single dimensional array operations:

5.1.2.1 Sorting array in ascending or descending. (Bubble and selection)

5.1.2.2 Searching element from array (Linear Search)

5.1.3 Character Single dimensional Array

5.1.3.1 Character Single dimensional array operations:

5.1.3.2 Use of \0, \n and \t

5.2 Pointers:

5.2.1 Concepts of Pointers

5.2.2 Declaring and initializing int, float, char and void pointers

5.2.3 Pointer to single dimensional numeric array.

<b>Reference Books:</b>	<ol style="list-style-type: none"> <li>1. Programming in C, Balaguruswami – TMH</li> <li>2. C: How to Program, Deitel &amp; Deitel - PHI</li> <li>3. C Programming Language, Kernigham &amp; Ritchie - TMH</li> <li>4. Programming in C, Stephan Kochan - CBS</li> <li>5. Mastering Turbo C, Kelly &amp; Bootle - BPB</li> <li>6.
