CORE-I

**201: Estimation Theory**

Course Code	201																																																								
Course Title	Estimation Theory																																																								
Credit	4																																																								
Teaching per Week	4																																																								
Maximum weeks per semester	15 (Including Class work, examination, preparation, holidays etc.)																																																								
Effective From	2023-24																																																								
Purpose of course	This paper deals with point estimation and interval estimation. From this paper the students are expected to build a foundation on Estimation theory.																																																								
Course Objective	The main objective of this course is to facilitate for investigate the properties of point estimators, impart the applications of various methods of findings point estimators and to learn techniques of construction of confidence intervals. Also, to learn computational skills to implement various statistical inferential concepts.																																																								
Course Outcomes	After completing this course, the students will be able to: CO1 Understand the concept of estimator with different properties CO2 Demonstrate and understanding the concept of unbiasedness and biasedness with theory CO3 Derive a foundation on different theorem based on estimators CO4 Describe the concept of BLUE, BAN, MVUE, MVBUE, UMVUE with theorems. CO5 Students have the knowledge methods of obtaining minimum variance unbiased estimators. CO6 Learn the methods for interval estimation for small and large sample size																																																								
Mapping with COs with PSOs	<table border="1"> <thead> <tr> <th></th> <th>PSO1</th> <th>PSO2</th> <th>PSO3</th> <th>PSO4</th> <th>PSO5</th> <th>PSO6</th> <th>PSO7</th> </tr> </thead> <tbody> <tr> <td>CO1</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO2</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO3</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO4</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO5</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO6</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7	CO1								CO2								CO3								CO4								CO5								CO6

**Core-II**  
**202: Testing of Hypotheses**

Course Code	202							
Course Title	Testing of Hypotheses							
Credit	4							
Teaching per Week	4							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2023-24							
Purpose of Course	The purpose of this course is to teach classical theory of testing of hypotheses, use of the concept of likelihood for testing of hypotheses and Sequential testing of hypotheses for different types of hypotheses and their applications.							
Course Objective	To make students aware of Neyman-Pearson Theory of testing of hypotheses, likelihood ratio based testing (For simple as well as composite hypotheses) and sequential testing procedures.							
Course Outcomes	<p>After successful completion of this course, student will be able to:</p> <p>CO1: Formulate null and alternative hypotheses; understand types of errors involved in the testing of hypotheses, concepts for comparisons of different possible test procedures to decide the best test for various types of null and alternative hypotheses for different real-life situations.</p> <p>CO2: Compute probabilities of types of errors and checking MLR property.</p> <p>CO3: Understand UMP and UMPU test with their applications and relevant results.</p> <p>CO4: Construct MP test, UMP test and UMPU test.-Knowledge of SLRT &amp; GLRT and SPRT.</p> <p>CO5: Use the concept and related results of invariant testing of hypotheses and their applications.</p> <p>CO6: Construct best test for distributions, which are not well behaved.</p> <p>CO7: Use concepts of least favourable distribution for testing of hypotheses.</p>							
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7
	CO1							
	CO2							
	CO3							
	CO4							
	CO5							
	CO6							
	CO7							
Pre-requisite	Detailed knowledge of Probability theory, Probability distributions and Estimation theory							
Course Content	<p><b>UNIT I:</b></p> <ul style="list-style-type: none"> <li><b>Basic concepts of testing of hypotheses</b> Statistical Hypotheses, types of hypotheses, Statistical tests, Critical region, randomized test, non-randomised test, Types of Errors, Size and Power of a test</li> <li><b>MP and UMP tests</b> Neyman-Pearson's Lemma &amp; Generalized Neyman-Pearson's Lemma and its applications to get Most Powerful test and UMP tests respectively, for parameters of well-behaved distributions.</li> </ul> <p><b>UNIT II:</b></p> <ul style="list-style-type: none"> <li><b>Unbiasedness for testing of hypotheses:</b> <math>\alpha</math>-Similar test, Similar test, UMP <math>\alpha</math>-similar test, unbiased test, relationship with UMP unbiased test, and its applications for well-behaved distributions, Similarity and completeness, tests with Neyman structure, UMP unbiased tests for multi-parameter</li> </ul>

### Core III

#### M. Sc. Statistics 2<sup>nd</sup> Semester

#### Course 203: Multivariate Analysis

Course Code	203
Course Title	Multivariate Analysis
Credit	4
Teaching per Week	4
Maximum weeks per semester	15 (Including Class work, examination, preparation, holidays etc.)
Effective From	2023-24
Purpose of course	The purpose of this course is to understand the extensions of univariate techniques to multivariate frameworks and learn to apply data reduction techniques used in the data analysis with the use of probability distributions.
Course Objective	In multivariate analysis students learn how to deal with the data analysis of several variables simultaneously. Necessary theoretical probability distributions of different multivariate technique use in classification, discriminate and data reduction techniques.
Course Outcomes	After completing this course, the students will be able to: CO1 Understand the development of multinomial and multivariate normal distribution with their properties. CO2 Understand the concept of Wishart distribution with various properties CO3 Understand the idea of partial and multiple correlation coefficient with testing of hypothesis CO4 Get Derivation of Hotelling $T^2$ statistic and their various application in real life problems CO5 Demonstrate the knowledge and understanding of the basic ideas behind classification and discriminant analysis CO6 Understand the concept of data reduction technique like factor, principal and Canonical correlation analysis

**M. Sc. Statistics 2<sup>nd</sup> Semester**  
**Elective Paper**  
**Course-2041: Industrial Statistics**

Course Code	2041							
Course Title	Industrial Statistics							
Credit	4							
Teaching per Week	4							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2023-2024							
Purpose of Course	The purpose of the course is to develop scientific view to analyse the industrial data about specific perspective. To learn the statistical quality control techniques used in industries such as control charts, acceptance sampling plans, reliability analysis etc. To learn some advanced control charts, capability indices and the concept of six-sigma.							
Course Objective	To make students acquainted with concepts of SQC, Reliability and Quality management.							
Course Outcomes	<p>After completing this course, students will be able to:</p> <p>CO1: Understand the basics of production process monitoring and apply concept of control charts on it.</p> <p>CO2: Apply the acceptance and continuous sampling plans in production process.</p> <p>CO3: Know and apply the concept of weighted control charts, six sigma, ISO:9000 series standard and Taguchi design.</p> <p>CO4: Understand the concepts of quality control, chance and assignable causes of variation, control charts for variables and attributes, producer's and consumer's risk-Acceptance sampling plans.</p> <p>CO5: Get idea of important lifetime distributions such as for exponential, Weibull, gamma and lognormal distributions.</p> <p>CO6: Use of estimation in their liability analysis.</p>							
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7
	CO1							
	CO2							
	CO3							
	CO4							
	CO5							
	CO6							
Pre-requisite	Knowledge of probability theory, probability distributions and estimation theory							
Course Content	<p><b>Unit – I</b></p> <ul style="list-style-type: none"> <li>• Introduction of Statistical Quality</li> <li>• Introduction, concept of quality and quality control, Process control and product control, variation in quality, theory of runs, specification limits, process limits and modify limits, advantages(uses) of S.Q.C.</li> </ul> <p><b>Unit – II</b></p> <ul style="list-style-type: none"> <li>• Statistical Quality Control techniques to control process</li> <li>• Theory of Control charts <ul style="list-style-type: none"> <li>i. Control charts for variables: X-bar, R-chart and sigma chart</li> <li>ii. Control charts for attributes: p-chart, np-chart, c-chart and u-chart</li> <li>iii. Comparison between for variables and control charts for attributes.</li> </ul> </li> </ul>

Syllabus revised by: Dr. Sejal A. Desai

Chairperson: A. J. Rajyaguru

**Elective paper**  
**Course-2042: Decision Theory**

Course Code	2042							
Course Title	Decision Theory							
Credit	4							
Teaching per Week	4							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2023-24							
Purpose of Course	To make students understand decision theory based on Bayesian probability i.e., making rational decisions against multiple criteria and testing of hypotheses using data sets which do not have any parametric information.							
Course Objective	The main objective of this course is to provide the detailed knowledge of statistical inference under Bayesian framework and Non-Parametric inference.							
Course Outcomes	<p>After successful completion of this course, student will be able to:</p> <p><b>CO1:</b> Identifying and dealing with the situations of decision making under risk and uncertainty</p> <p><b>CO2:</b> Understand decision problem, loss function, risk function and decision rules, their admissibility and completeness</p> <p><b>CO3:</b> Use of different decision rules under uncertainty and risk.</p> <p><b>CO4:</b> Obtaining best decision rules using different types of prior, posterior distributions and loss functions</p> <p><b>CO5:</b> Understand the applicability of different nonparametric statistical tests for one, two (paired as well as unpaired) and more than two populations.</p> <p><b>CO6:</b> Solve hypothesis testing problems where the conditions for the traditional parametric inferential techniques are not fulfilled.</p>

**Course: 2044: DATA BASE MANAGEMENT SYSTEMS**

Course Code	2044								
Course Title	DATA BASE MANAGEMENT SYSTEMS								
Credit	4								
Teaching per Week	4Hrs								
Minimum weeks per Semester	15(Including Classwork, examination, preparation, holidays etc.)								
Effective From	2023-24								
Purpose of Course	The purpose of the course is to prepare the students to be capable of doing any kind of data management that will further help them to perform various activity of data science. The core objective of this course is to identify different database systems, their model sand to perform various data management task such as retrieval, insertion and Renovation of data using its tool.								
Course Objective	To make students familiar with data base management theory and give Practical exposure to manage at a using Query language.								
Course Outcomes	<p>After completing this course, students will be able to:</p> <p>CO1: Understand and apply the concept of data base management system by comparing them with traditional data management techniques</p> <p>CO2: Perform data definition, data manipulation, data control and transaction control using Query language</p> <p>CO3: Learn fundamental data models and its application in real world domain.</p> <p>CO4: Extend the procedural structural query language using various Concept such as Procedures, Functions, Cursor and Triggers</p>								
Mapping between COs With PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7

**Course-205: Practical paper-II**

Course Code	206							
Course Title	Practical paper-II							
Credit	6							
Teaching per Week	12							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2023-24							
Purpose of Course	The purpose of this course is to enrich the computing power of students using Excel, JAMOVİ and C language.							
Course Objective	Learning analysis of various kinds of data using excel will help the students to understand how to go around with the computing part of some of the theoretical aspects.							
Course Outcomes	<p>After successful completion of this course, student will be able to:</p> <p>CO1: Solve Decision related real life problems using decision criteria, can solve life-table related problems.</p> <p>CO2: Perform the analysis with analysis tool pack in excel and generate/draw Quality control charts in excel.</p> <p>CO3: Understand and apply various functions available in excel.</p> <p>CO4: Estimate parameters using formula in excel by different methods</p> <p>CO5: Solve problems related to multivariate data with use of excel</p> <p>CO6: Apply parametric tests to solve real life problems using excel</p>

	CO6							
Pre-requisite	Basic knowledge of computer and typing skill is essential.							
Course Content	<p><b>Unit-I</b></p> <p><b>1. Introduction</b></p> <p>    1. Algorithms and Flowchart</p> <p>    2. Types of Languages</p> <p>    3. Introduction to C Language</p>							

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

2. C Fundamentals
  1. Identifiers
  2. Data Types
  3. Constants and Variables
  4. Arrays
3. Operators and Expressions
  1. Arithmetic Operators
  2. Unary Operators
  3. Relations Operators
  4. Logical Operators
  5. Assignment Operators
  6. Conditional Operators
  7. Library Functions
  8. Expressions
  9. Evaluation of Expression

#### Unit-II

1. Data Input and Output
  1. Single Character input and output
  2. The scanf() function
  3. The printf() function
  4. gets() and puts() functions
2. Control Statements
  1. The While Statement
  2. do-while statement
  3. for statement
  4. if - else statement
  5. switch statement
  6. break statement
  7. continue statement
  8. goto statement

#### Unit-III

1. Arrays
  1. Defining an array
  2. Processing an array element
  3. Multi-dimensional arrays
  4. Passing array to a function
  5. Arrays and Strings
2. Structures and Unions
  1. Defining a structure
  2. Processing a structure
  3. Unions

#### Unit-IV

1. Functions
  1. Introduction to functions

STATISTICS

SYLLABUS FOR

M. Sc. (APPLIED STATISTICS) SEM II

AS PER NEP 2020

TO BE IMPLEMENTED FROM THE ACADEMIC YEAR 2023-2024.  
UNDER THE FACULTY OF SCIENCE

On behalf of BOS (Statistics), I  
approve this syllabus.  
If any suggestion in the next meeting  
of BOS, I will take note on it.

B. Trivedi  
(06/12/23)  
(Chairman)  
BOS in Statistics)

Syllabi  
of  
M. Sc. (Applied Statistics)  
Semester-II  
AS PER NEP 2020

To be implemented from the Academic Year 2023-2024.

UNDER THE FACULTY OF SCIENCE

COURSES	NO.	TITL E	HRS/ WEEK	EXAM SCHEDULE			TOTAL MARKS	CRE DIT

**M.Sc. Applied Statistics 2<sup>nd</sup> Semester**  
**Core paper**  
**Course: 201: Statistical Inference-I**

Course Code	201							
Course Title	Statistical Inference I							
Credit	4							
Teaching per Week	4							
Maximum weeks per semester	15 (Including Class work, examination, preparation, holidays etc.)							
Effective From	2023-24							
Purpose of course	The purpose of the course are explain the concept of Estimation theory which is divided in to two parts point estimation and interval estimation. From this paper the students are expected to build a foundation on inferential statistics.							
Course Objective	Study the properties and methods of estimators. Develop skills to calculate small and large sample size confidence intervals with different methods.							
Course Outcomes	After completing this course, the students will be able to: CO1 Understand the concept of estimator with different properties CO2 Demonstrate and understanding the concept of unbiasedness and biasedness CO3 Become aware of statements of different theorem based on estimators and applies it in suitable situations. CO4 Describe the concept of BAN, MVUE, MVBUE, and UMVUE. CO5 Have the knowledge of methods of obtaining minimum variance unbiased estimators. CO6 Learn the methods for interval estimation for small and large size confidence internal							
Mapping with COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7
	CO1							
	CO2							
	CO3							
	CO4							
	CO5							
	CO6							
Pre-requisite	Basic of probability distributions and calculus							
Course Content	<b>UNIT I:</b> Estimation & Properties of Point estimator: Theoretical finite and infinite population, parameter, parametric space, statistic, estimation of a parameter, Problem of Criterion of selecting a good estimator, Properties of closeness, Unbiasedness, Consistency, Efficiency and Sufficiency. Jointly sufficient statistics, Statement and application of factorization theorem. Minimal sufficient statistics, Complete sufficient statistics, BAN estimator.							

*Pacub*

*Rajjant S.*

*B. Naik*

	<p><b>UNIT II:</b> Minimum variance unbiased estimator, Lower bound of variance of an estimator, Statements &amp; application of Cramer- Rao inequality, condition of existence of uniformly minimum variance bound unbiased estimator, difference between MVUE and MVBUE. Uniformly minimum variance unbiased estimator, statement and applications of Rao-Blackwell theorem and Lehmann-scheffe theorem, Location and scale invariance estimator and parameter. Pitman's estimator for location and scale parameter. (theorems without proof)</p> <p><b>UNIT III:</b> Methods of estimation: (i) Method of maximum likelihood, Properties of maximum likelihood estimator, (ii) Method of moments, (iii) Method of scoring, (iv) Method of minimum chi-square, (v) Method of modified minimum chi-square, (vi) Method of least squares.</p> <p><b>UNIT IV:</b> Interval Estimation: Introduction to confidence interval, Definition of confidence interval, Pivotal quantity, Pivotal quantity method. (i) Confidence interval for mean and variance when sampling is done from normal population. (ii) Confidence interval for large samples.</p>

**Core III**

**M. Sc. Applied Statistics 2<sup>nd</sup> Semester**

**Course 203: Applied Multivariate Analysis**

Course Code	203																																																
Course Title	Applied Multivariate Analysis																																																
Credit	4																																																
Teaching per Week	4																																																
Maximum weeks per semester	15 (Including Class work, examination, preparation, holidays etc.)																																																
Effective From	2023-24																																																
Purpose of course	The purpose of this course is to learn how to deal with the multivariate data set and to learn necessary theoretical concepts of different multivariate techniques and data reduction techniques.																																																
Course Objective	The main objective of this course are to acquaint with the basic ideas, applicability and method of multivariate data analysis.																																																
Course Outcomes	After completing this course, the students will be able to: CO1 Understand the concept of multinomial and multivariate normal distribution with their properties. CO2 Understand the idea of partial and multiple correlation coefficient with testing of hypothesis CO3 Demonstrate Hotelling T <sup>2</sup> statistic and their various application in real life problems CO4 Demonstrate the knowledge and understanding of the basic ideas behind classification and discriminant analysis CO5 Understand concept of data reduction technique like factor analysis and principal component																																																
Mapping with COs with PSOs	<table border="1"> <thead> <tr> <th></th> <th>PSO1</th> <th>PSO2</th> <th>PSO3</th> <th>PSO4</th> <th>PSO5</th> <th>PSO6</th> <th>PSO7</th> </tr> </thead> <tbody> <tr> <td>CO1</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO2</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO3</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO4</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>CO5</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7	CO1								CO2								CO3								CO4								CO5

**Elective Paper**  
**Course-2041: Industrial Statistics**

Course Code	2041							
Course Title	Industrial Statistics							
Credit	4							
Teaching per Week	4							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2019-20							
Purpose of Course	<p>The purpose of the course is to develop scientific view to analyse the industrial data about specific perspective. To learn the statistical quality control techniques used in industries such as control charts, acceptance sampling plans etc.</p> <p>To learn some advanced control charts, capability indices and the concept of six-sigma.</p>							
Course Objective	To make students acquainted with concepts quality management.							
Course Outcomes	<p>After completing this course, students will be able to:</p> <p>CO1: Understand basic of production process monitoring and apply concept of control charts on it.</p> <p>CO2: Apply the acceptance and continuous sampling plans in production process.</p> <p>CO3: Know and apply the concept of weighted control charts, six sigma, SO:9000 series standards and Taguchi design.</p> <p>CO4: Understand the concepts of quality control, chance and assignable causes of variation, control charts for variables and attributes, producer's and consumer's risk-Acceptance sampling plans.</p> <p>CO5: Get idea of important life time distributions such as for exponential, Weibull, gamma and lognormal distributions.</p> <p>CO6: Use of estimation in the reliability analysis.</p>

**Elective paper**  
**Course-2042: Decision Theory**

Course Code	2042							
Course Title	Decision Theory							
Credit	4							
Teaching per Week	4							
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)							
Effective From	2023-24							
Purpose of Course	To make students understand decision theory based on Bayesian probability i.e., making rational decisions against multiple criteria and testing of hypotheses using data sets which do not have any parametric information.							
Course Objective	The main objective of this course is to provide the detailed knowledge of statistical inference under Bayesian framework and Non-Parametric inference.							
Course Outcomes	<p>After successful completion of this course, student will be able to:</p> <p><b>CO1:</b> Identifying and dealing with the situations of decision making under risk and uncertainty</p> <p><b>CO2:</b> Understand decision problem, loss function, risk function and decision rules, their admissibility and completeness</p> <p><b>CO3:</b> Use of different decision rules under uncertainty and risk.</p> <p><b>CO4:</b> Obtaining best decision rules using different types of prior, posterior distributions and loss functions</p> <p><b>CO5:</b> Understand the applicability of different nonparametric statistical tests for one, two (paired as well as unpaired) and more than two populations.</p> <p><b>CO6:</b> Solve hypothesis testing problems where the conditions for the traditional parametric inferential techniques are not fulfilled.</p>							
Mapping between COs with PSOs		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7
	CO1							
	CO2							
	CO3							
	CO4							
	CO5							
	CO6							
Pre-requisite	Detailed knowledge of Probability theory, Estimation Theory and Probability distribution.							
Course Content	<p><b>UNIT I:</b></p> <ul style="list-style-type: none"> <li><b>Review of basic elements of statistical decision problem:</b> Various inference problems viewed as decision problems.</li> </ul> <p><b>UNIT II:</b></p> <ul style="list-style-type: none"> <li><b>Introduction to Decision Analysis:</b></li> </ul>

**Course-2043: Actuarial Statistics**

Course Code	2043								
Course Title	Actuarial Statistics								
Credit	4								
Teaching per Week	4								
Minimum weeks per Semester	15 (Including Classwork, examination, preparation, holidays etc.)								
Effective From	2023-24								
Purpose of Course	<p>The purpose of this course is to learn the life tables used in insurance products</p> <ul style="list-style-type: none"> <li>To learn the concept of interest ,different life insurance products, life annuities, net premiums.</li> <li>To motivate students to prepare for exams required for employment in the actuarial science profession.</li> </ul>								
Course Objective	To make students acquainted with actuarial science and implementation Of statistics in actuarial science								
Course Outcomes	<p>After completing this course, students will be able to:</p> <p>CO1:Understand the utility theory, insurance products and life tables.</p> <p>CO2:Understand the concept of interest.</p> <p>CO3:Understand the concept of life insurance and the existing insurance products of different insurance company.</p> <p>CO4:Know life annuities, net premium and net premium reserves.</p> <p>CO5:Understand the concept of Stationary population and various models</p>

**Course: 2044: DATA BASE MANAGEMENT SYSTEMS**

Course Code	2044								
Course Title	DATA BASE MANAGEMENT SYSTEMS								
Credit	4								
Teaching per Week	4Hrs								
Minimum weeks per Semester	15(Including Classwork, examination, preparation, holidays etc.)								
Effective From	2023-24								
Purpose of Course	The purpose of the course is to prepare the students to be capable of doing any kind of data management that will further help them to perform various activity of data science. The core objective of this course is to identify different database systems, their model sand to perform various data management task such as retrieval, insertion and Renovation of data using its tool.								
Course Objective	To make students familiar with data base management theory and give Practical exposure to manage at a using Query language.								
Course Outcomes	<p>After completing this course, students will be able to:</p> <p>CO1: Understand and apply the concept of data base management system by comparing them with traditional data management techniques</p> <p>CO2: Perform data definition, data manipulation, data control and transaction control using Query language</p> <p>CO3: Learn fundamental data models and its application in real world domain.</p> <p>CO4: Extend the procedural structural query language using various Concept such as Procedures, Functions, Cursor and Triggers</p>								
Mapping between COs With PSO's		PSO1	PSO2	PSO3	PSO4	PSO5	PSO6	PSO7
