M. COM. SYLLABUS(NCF-NEP)

Sem -I and Sem-II

DEPARTMENT OF STATISTICS

PROGRAM TITLE	**Master of Commerce**
Name of Program	**M. Com. – Advanced Statistics**
Program Abbreviation	**M. Com.**
Duration	**2 Year**
Eligibility Criteria	**B. Com**
Pre-requisite	**Pre-requisite for this Learning Program** ➢ Students should possess a **basic understanding of Statistics and Mathematics** at the higher secondary (HSC) or undergraduate level. ➢ Familiarity with **fundamental statistical concepts** such as averages, dispersion, probability, and simple data interpretation is recommended. ➢ Ability to understand and work with **numerical data, graphs, and basic algebraic expressions**. ➢ Basic knowledge of **computer applications**, especially spreadsheets (Excel), is desirable for statistical analysis. ➢ An inclination toward **analytical thinking, logical reasoning, and quantitative problem-solving** will support learning effectiveness.
Medium of Instruction	English / Gujarati (as per institutional provision)
Objective of Program	➢ **To develop strong theoretical foundations** in probability, statistical distributions, design of experiments, actuarial science, forecasting methods, and operations research, enabling students to understand and analyze complex quantitative problems. ➢ **To build analytical and computational skills** using modern statistical tools, software, and mathematical models, preparing students to handle real-life data in business, finance, economics, agriculture, and industry. ➢ **To promote data-driven decision-making** by training students to collect, organize, analyze, interpret, and communicate quantitative data with accuracy, clarity, and ethical responsibility. ➢ **To enhance research capabilities** through exposure to statistical modeling, hypothesis testing, experimental designs, simulation techniques, and advanced analytical methods relevant for higher studies and professional careers. ➢ **To prepare competent professionals** who can apply statistical reasoning and problem-solving skills in various fields such as banking, insurance, analytics, operations management, policymaking, and academic research.
Program Outcome (PO)	After completion of the **M. Com – Advanced Statistics** program, students will be able to: **PO1: Disciplinary Knowledge** Acquire comprehensive knowledge of statistical concepts, mathematical methods, business applications, operations research, actuarial science, experimental design, and economic analysis. **PO2: Critical Thinking and Analytical Reasoning** Develop the ability to think logically, critically, and analytically for solving quantitative, statistical, and business-related problems. **PO3: Problem Solving Ability** Apply statistical tools, models, and techniques to formulate, analyze, and solve real-life problems in commerce, economics, industry, research, and public administration. **PO4: Statistical and Computational Skills** Use statistical methods, mathematical reasoning, and appropriate computational tools for data analysis, interpretation, forecasting, optimization, and decision-making. **PO5: Research Aptitude** Develop the ability to design studies, collect data, analyze results, interpret findings, and prepare reports for academic, social, industrial, and business research. **PO6: Communication Skills**

	Communicate statistical ideas, quantitative findings, business interpretations, and analytical conclusions effectively in oral and written form. **PO7: Ethical and Professional Responsibility** Understand ethical practices in data handling, research work, business analysis, insurance, and decision-making with honesty, responsibility, and professional integrity. **PO8: Teamwork and Leadership** Work effectively both independently and in teams, and demonstrate leadership in project work, research assignments, data-based decision-making, and organizational tasks. **PO9: Employability and Entrepreneurial Skills** Develop employability, professional competence, and entrepreneurial skills relevant to statistics, business analytics, insurance, finance, operations research, and data-driven sectors. **PO10: Lifelong Learning** Recognize the need for continuous learning and skill upgradation in statistical methods, business applications, technology, and interdisciplinary knowledge.
Program Specific Outcomes (PSO)	After completing the program, students will be able to: **PSO1: Statistical Foundations** Understand and apply the core concepts of probability, distributions, sampling theory, statistical inference, and mathematical statistics. **PSO2: Data Analysis and Interpretation** Analyze, interpret, and present quantitative data using appropriate statistical tools for business, economics, commerce, and social science applications. **PSO3: Experimental and Research Applications** Design, conduct, and analyze experiments and surveys using suitable statistical techniques for research and practical problem solving. **PSO4: Operations Research and Optimization** Apply operations research methods such as linear programming, game theory, sequencing, inventory control, and queuing models to optimize decision-making in business and industry. **PSO5: Financial, Economic, and Actuarial Applications** Use statistical methods in actuarial science, business forecasting, economic analysis, insurance, finance, and risk-related decision-making. **PSO6: Practical and Professional Readiness** Demonstrate practical statistical skills, computational ability, report-writing competence, and professional readiness for higher studies, research, competitive exams, and employment.

Semester - I

Advanced Statistics – I : Design of Experiments (Major Paper – I) – Credit 4
As per NEP 2020
To be implemented from the Academic year 2026-27

Program Name	**M. Com – Advanced Statistics**					
Semester	**1**					
NCrF Credit Level	**6.0**					
Course Type	**Major**					
Course Subtype						
Subject Type	**Discipline Specific**					
Course Code	**MJASTC 101**					
Course Level	**400**					
Course Title	**Advanced Statistics – I : Design of Experiments**					
Credit	**Theory:**	**4**	**Practical:**		**Total:**	**4**
Effective From	**Academic Year : 2026-27**					
Course Outcomes	**On completion of the course, the students will be able to:** **CO1**: Understand the fundamental concepts, principles, and importance of design of experiments in statistical analysis. **CO2**: Analyze Completely Randomized Design (CRD) and perform ANOVA for testing treatment effects. **CO3**: Apply Randomized Block Design (RBD) and Latin Square Design (LSD), including handling missing observations. **CO4**: Understand factorial experiments, main effects, interaction effects, and apply Yates' method. **CO5**: Apply experimental design techniques in agriculture, industry, and research problems.

Semester - I

Advanced Statistics – II : Actuarial Statistics (Major Paper – II) – Credit 4
As per NEP 2020
To be implemented from the Academic year 2026-27

Program Name	**M. Com – Advanced Statistics**					
Semester	**1**					
NCrF Credit Level	**6.0**					
Course Type	**Major**					
Course Subtype						
Subject Type	**Discipline Specific**					
Course Code	**MJASTC 102**					
Course Level	**400**					
Course Title	**Advanced Statistics – II : Actuarial Statistics**					
Credit	**Theory:**	**4**	**Practical:**		**Total:**	**4**
Effective From	**Academic Year : 2026-27**					

Course Outcomes

On completion of the course, the students will be able to:

CO1: Understand the basic concepts of actuarial statistics and its applications in insurance and risk analysis.
CO2: Apply probability distributions and utility theory in insurance decision-making.
CO3: Understand premium calculation principles and individual risk models.
CO4: Analyze survival distributions, life tables, and mortality functions.
CO5: Apply actuarial models in life insurance and annuity calculations.

Course Content

Content	Weightage	Marks
Unit – 1: Introductory Statistics and Its Application in Insurance • Discrete, Continuous, and Mixed Probability Distributions • Insurance Applications • Distribution of Sum of Random Variables • Utility Theory: Utility function, expected utility criterion, types of utility functions, insurance, and utility theory	**20%**	**10**
Unit – 2: Principles of Premium Calculation: • Properties of Premium Principles • Examples of Premium Principles	**20%**	**10**

	• Individual Risk Models: Models for individual claims, the sum of independent claims, approximations, and their application		
	Unit – 3: Survival Distribution and Life Tables • Uncertainty of Age at Death • Survival Function • Time-Until-Death for a Person • Curate Future Lifetime • Force of Mortality • Life Tables with Examples • Deterministic Survivorship Group • Life Table Characteristics • Assumptions for Fractional Age • Some Analytical Laws of Mortality	**30%**	**15**
	Unit – 4: Life Insurance • Models for Insurance Payable at the Moment of Death • Insurance Payable at the End of the Year of Death and Their Relationship **Life Annuities:** • Continuous Life Annuities, Discrete Life Annuities, Life Annuities with Periodic Payments **Payments:** • Continuous and Discrete Premiums	**30%**	**15**

Credit	**Theory:**	**4**	**Practical:**		**Total:**	**4**
Effective From	**Academic Year : 2026-27**					

Course Outcomes

On completion of the course, the students will be able to:

CO1: Understand the concepts of random variables, probability functions, expectation, moments, and M.G.F.

CO2: Derive and apply Binomial and Poisson distributions with their properties and applications.

CO3: Understand and apply Negative Binomial distribution in discrete probability modeling.

CO4: Analyze Normal distribution, standard normal distribution, and approximation methods.

CO5: Apply univariate distributions in statistics, business, economics, and research problems.

Advanced Statistics – IV : Statistics for Economics (Major Paper – IV) Credit: 4
As per NEP 2020
To be implemented from the Academic year 2026-27

Program Name	**M. Com – Advanced Statistics**					
Semester	**2**					
NCrF Credit Level	**6.0**					
Course Type	**Major**					
Course Subtype						
Subject Type	**Discipline Specific**					
Course Code	**MJASTC 204**					
Course Level	**400**					
Course Title	**Advanced Statistics – IV : Statistics for Economics**					
Credit	**Theory:**	**4**	**Practical:**		**Total:**	**4**
Effective From	**Academic Year : 2026-27**					

Course Outcomes

On completion of the course, students will be able to:

CO1: Understand the concepts and components of time series analysis and forecasting techniques.

CO2: Construct and analyze index numbers and evaluate their properties.

CO3: Apply statistical methods in demand and supply analysis using various economic models.

CO4: Understand and apply growth models such as Harrod-Domar and Solow models.

CO5: Use statistical tools for economic analysis, planning, and real-life decision-making.

Course Content

Content	Weightage	Marks
Unit – 1: Introduction to Business Forecasting • Meaning and Concept of Forecasting • Importance and Need of Forecasting • Types of Forecasting • Steps / General Approach to Forecasting	**20%**	**10**

Unit – 2: Methods of Business Forecasting
• Mathematical Models of Forecasting
  ○ **Exponential Model:** $y = ae^{bx}$
  ○ **Power Model:** $y = ab^{x}$
• Forecasting Demand
	30%	**15**

	• Industry vs Company Sales Forecasting (Theory) • Factors Affecting Company Sales (Theory)		
	Unit – 3: Fundamentals of Hypothesis Testing • Definition of Statistical Hypothesis • Simple & Composite Hypothesis • Critical Region • Type I and Type II Errors • Level of Significance • Power of a Test	**20%**	**10**

	Unit – 4: Most Powerful Tests & Applications
	• Neyman–Pearson Lemma (without proof)
	• Most Powerful Tests for:
	  ○ Binomial Distribution
	  ○ Poisson Distribution
	  ○ Normal Distribution
	  ○ Exponential Distribution
	• Most powerful test of a simple hypothesis vs simple alternative
		30%	**15**

Reference Books

Sr. No.	Book Title & Author	Publisher / Edition
1	*Distributions in Statistics* — Johnson, N. L. & Kotz, S. (1977)	John Wiley
2	*Mathematical Statistics* — Ferguson, T. (1967)	Academic Press
3	*Statistical Distributions* — Jaiswal, M. C. (1973)	Gujarat University Book Publication Board, Ahmedabad
4	*Introduction to Probability Theory and Mathematical Statistics* — Rohatgi, V. K. (1984)	Wiley Eastern
5	*Business Forecasting* — Hanke, J. E. & Reitsch, A.	Pearson Education
6	*Forecasting: Methods and Applications* — Makridakis, S.; Wheelwright, S. C.; Hyndman, R.	Wiley
7	*Fundamentals of Mathematical Statistics* — Gupta, S. C. & Kapoor, V. K.	Sultan Chand
8	*Introduction to the Theory of Statistics* — Mood, Graybill & Boes	McGraw-Hill
9	*Fundamentals of Statistics* — Goon, Gupta & Dasgupta	World Press
10	*Theory and Problems of Statistics* — Spiegel, M. R.	Schaum's Series
11	*Business Forecasting* — Allen, G.	McGraw-Hill
12	*Introduction to Mathematical Statistics* — Hoel, P. G.	Wiley
13	*Optimization Technique* — S. D. Sharma	—
14	*Operations Research* — Swarupkanti, Gupta P. K. & Manmohan (2007)	13th Edition, Sultan Chand & Sons
15	*Operations Research: An Introduction* — Taha, H. A. (2007)	8th Edition, Prentice Hall of India

	16	*Linear Programming and Applications* — Gass, S. I. (1975)	McGraw-Hill
Teaching Methodology	Hybrid (Interactive Lectures, Lecture-cum-Demonstration, Group Discussions, Problem-based Learning, and Self-Study Assignments)		
Evaluation Method	Internal Assessment : 50 Marks External Assessment : 50 Marks		

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT
M. COM Part - 1
Semester - II
Advanced Statistics – VI : Univariate Distributions & Sampling Distributions – 2 (Major Paper – VI) – Credit 4
As per NEP 2020
To be implemented from the Academic year 2026-27

<table>
<tr><td>Program Name</td><td colspan="6">M. Com – Advanced Statistics</td></tr>
<tr><td>Semester</td><td colspan="6">2</td></tr>
<tr><td>NCrF Credit Level</td><td colspan="6">6.0</td></tr>

<tr><td>Effective From</td><td colspan="6">Academic Year : 2026-27</td></tr>
<tr><td>Course Outcomes</td><td colspan="6">On completion of the course, the students will be able to:
CO1: Understand Gamma distribution and derive its mean and variance using M.G.F.
CO2: Analyze Beta Type–I and Beta Type–II distributions with properties and applications.
CO3: Understand Cauchy distribution and its applications in economics and physics.
CO4: Derive and analyze sampling distributions such as t, F, and χ^2 distributions.
CO5: Apply advanced distributions in statistical inference and research.</td></tr>
<tr><td>Mapping between Cos and PSOs</td><td colspan="6">
