સંદર્ભ: યુનિવર્સિટી પરિપત્ર ક્રમાંક:ઓથો./પરિપત્ર/૧૩૬૨૪/૨૦૨૬, તા. ૧૮/૦૬/૨૦૨૬

-:પરિપત્ર:-

યુનિવર્સિટીના વિજ્ઞાન વિદ્યાશાખા હેઠળના તમામ શૈક્ષણિક વિભાગોના વડાશ્રીઓ અને યુનિવર્સિટી સંલગ્ન વિજ્ઞાન વિદ્યાશાખા હેઠળની તમામ કોલેજોનાં આચાર્યશ્રીઓને જણાવવાનું કે, NEP-2020 અંતર્ગત શૈક્ષણિક વર્ષ ૨૦૨૬-૨૭ થી અમલમાં આવનાર B.Sc. Chemistry Sem.-7 & 8 Honours (with OJT/without OJT) અને Honours with Research નો અભ્યાસક્રમ યુનિવર્સિટી પરિપત્ર ક્રમાંક:ઓથો./પરિપત્ર/૧૩૬૨૪/૨૦૨૬, તા. ૧૮/૦૬/૨૦૨૬ થી પરિપત્રિત કરેલ, જેમાં B.Sc.Honours without OJTના અભ્યાસક્રમમાં કરેલ સુધારો રસાયણશાસ્ત્ર વિષયની અભ્યાસ સમિતિના ચેરમેનશ્રીએ અભ્યાસ સમિતિવતી અને વિજ્ઞાન વિદ્યાશાખાના અધ્યક્ષશ્રીએ વિદ્યાશાખાવતી મંજૂર કરી એકેડેમિક કાઉન્સિલને કરેલ ભલામણ એકેડેમિક કાઉન્સિલની તા.૨૪/૧૨/૨૦૨૪ ની સભાનાં ઠરાવ ક્રમાંક:૩૫૩ અન્વયે માન.કુલપતિશ્રીને આપેલ સત્તા અંતર્ગત માનનીય કુલપતિશ્રી દ્વારા મંજૂર કરેલ છે, જે સંદર્ભ B.Sc. Chemistry Sem.-7 & 8 Honours (with OJT/without OJT) અને Honours with Research નો સુધારા સહિતનો સંપૂર્ણ અભ્યાસક્રમ આ સાથે સામેલ છે, જેનો અમલ કરવા આથી જાણ કરવા માં આવે છે.

(બિડાણ: ઉપર મુજબ)

ક્રમાંક:ઓથો./પરિપત્ર/૧૬૮૪૩/૨૦૨૬

તા.૨૧/૦૭/૨૦૨૬

કુલસચિવ

પ્રતિ,

(૧) યુનિવર્સિટીના વિજ્ઞાન વિદ્યાશાખા હેઠળના તમામ શૈક્ષણિક વિભાગોના વડાશ્રીઓ.

(૨) યુનિવર્સિટી સંલગ્ન વિજ્ઞાન વિદ્યાશાખા હેઠળની તમામ કોલેજોનાં આચાર્યશ્રીઓ.

... આપશ્રીના વિભાગ/કોલેજના સંબંધિત શિક્ષકો/વિદ્યાર્થીઓને જાણ કરી અમલ કરવા સારું.

(૩) અધ્યક્ષશ્રી, વિજ્ઞાન વિદ્યાશાખા.

(૪) પરીક્ષા નિયામકશ્રી, પરીક્ષા વિભાગ, વીર નર્મદ દ. ગુ. યુનિવર્સિટી, સુરત.

.....તરફ જાણ તેમજ અમલ સારું.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT

Syllabus for
With On Job Training (OJT) B.Sc.
Honours Chemistry Programme
Semester- VII
Effective from
Academic Year: 2026-27

VEER NARMAD SOUTH GUJRAT UNIVERSITY, SURAT

B. Sc. (Chemistry) Honours

Name of Program	Bachelor of Science Honours (Chemistry)
Program Abbreviation	B.Sc. Honours (Chemistry)
Duration	1 Year
Eligibility Criteria	B.Sc. Honours (Chemistry) ELIGIBILITY:(SC/ST- 35%, OPEN/SEBC-40%), A candidate who has obtained his/her Bachelor's Degree with chemistry shall be considered eligible for admission in B.Sc. (Honours) Chemistry
Medium of Instruction	English
Objective of Program	The core objective of the B.Sc. Honours is to prepare the students for dynamic career in industry and academia by providing an excellent environment of teaching and research in the core and emerging areas of the discipline.
Program Outcome	Students need to build up foundation in the fundamentals & application of current chemical and scientific theories in the concerned branches of Inorganic, Organic, Analytical, Physical, Environmental and Pharmaceutical Chemistry. PO-01: <u>Advanced Knowledge & Conceptual Understanding</u>: Demonstrate in-depth knowledge of core principles and emerging trends in the chosen scientific discipline. Integrate multidisciplinary scientific concepts to address real-world challenges in research and industry. PO-02: <u>Research & Analytical Skills</u>: Develop critical thinking, problem-solving and research oriented skills for innovation and scientific advancements. Apply modern experimental, computational and statistical tools for data analysis and evidence-based conclusions. PO-03: <u>Technological Proficiency & Instrumentation</u>: Gain expertise in advanced laboratory techniques, computational modelling and high-end scientific instrumentation. Utilize cutting edge technologies such as artificial intelligence, bioinformatics and nanotechnology for scientific exploration. PO-04: <u>Environmental & Societal Impact</u>: Understand the role of science in addressing environmental sustainability, public health and resource management. Contribute to biodiversity conservation, sustainable agriculture and climate change mitigation through scientific solutions.

	PO-05: <u>Innovation & Entrepreneurship</u>: Apply scientific knowledge for the development of innovative products, processes and services in industry & start-ups. Promote entrepreneurship in science and technology, healthcare, analytics and environmental sciences through technology transfer. PO-06: <u>Communication & Collaborative Research</u>: Develop proficiency in scientific communication, technical writing and effective dissemination of research findings. Engage in interdisciplinary collaborations, industry-academic partnerships and global research networks. PO-07: <u>Ethical & Value-Based Scientific Practices</u>: Uphold scientific integrity, ethical research practices and social responsibility in professional and academic endeavours. Apply knowledge with a strong ethical framework, considering societal, legal and environmental implications. PO-08: <u>Lifelong Learning & Career Readiness</u>: Cultivate a mind-set for lifelong learning, professional growth and adaptability to new scientific developments. Prepare for higher education, research careers, competitive exams and industry-oriented roles in science and technology. Students need to build up foundation in the fundamentals & application of current chemical and scientific theories in the concerned branches of Inorganic, Organic, Analytical, Physical, Environmental and Pharmaceutical Chemistry.
--	---

Program Specific Outcomes	PSO1 : Explain the fundamental principles of inorganic, organic, physical, analytical, and biochemistry along with their interdisciplinary applications. PSO2 : Apply chemical concepts, laboratory techniques, and instrumental methods for qualitative, quantitative, and analytical investigations. PSO3 : Analyze chemical reactions, mechanisms, spectral data, and experimental results using scientific reasoning and problem-solving skills. PSO4 : Evaluate chemical processes, environmental impacts, industrial practices, and experimental outcomes with accuracy, safety, and ethical responsibility. PSO5 : Design and perform experiments, research projects, and innovative chemical applications using modern scientific tools and methodologies. PSO6 : Develop professional, entrepreneurial, computational, and communication skills for higher studies, research, industry, and allied chemical professions.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-701					
Course Level	400-499					
Course Tittle	Inorganic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1: Recall and explain the fundamental concepts of symmetry elements, symmetry operations, point groups, boranes, and metal clusters. CO2: Classify molecules into appropriate point groups and interpret character tables for chemical applications CO3: Apply group theory to predict molecular properties such as bonding, hybridization, IR and Raman activity, and electronic transitions. CO4: Analyze the structure and bonding of boron hydrides and metal clusters using Wade's rules and molecular orbital concepts. CO5: Evaluate the role of symmetry and cluster chemistry in organometallic, inorganic, and bioinorganic systems. CO6: Design and solve advanced chemical problems involving symmetry operations, spectral interpretation, and cluster electron counting.

Course Content		
Unit	Description	Hours
1.	SYMMETRY AND GROUP THEORY IN CHEMISTRY AND ITS APPLICATIONS Representation of Group: Preparation of matrices and vectors, similarity transformations and Classes for C_{2v}, C_{2h} and C_{3v} point groups, matrix notation for geometric transformation, Orthogonality theorem and its consequences, reducible and irreducible representation and their relation, preparation of character table for C_{2v} and C_{3v} point groups. Applications of group theory to Transformation properties of atomic orbitals and Hybridization of σ-bond for H_2O and NH_3 molecules.	15 Hrs.
2.	(A) Boron Hydride Boron hydride and its classification, Wade's Rule, Bonding in boron hydrides. Preparation, Structure and bonding in Diborane, Tetraborane (10), Penta borane (9), Penta borane (10) and dodeca borane (11) Anion. (B) Metal Clusters Introduction, Classification, carbonyl cluster, Low nuclearity carbonyl clusters, high nuclearity carbonyl clusters, electron counting scheme for HNCCS, Halides types clusters: dinuclear clusters, trinuclear clusters, tetranuclear clusters, hexanuclear cluster.	15 Hrs.

References Books:	
1.	Chemical Applications of Group Theory by F. A. Cotton (Second Edition), Wiley Eastern Limited, New Delhi, 1976.
2.	Group Theory and Its Application by P. K. Bhattacharya, Himalaya Publishing House, Mumbai, 1986.
3.	Group Theory and Symmetry by L. R. Hall, McGraw Hill, New York, 1989.
4.	Advanced Inorganic Chemistry by F. A. Cotton and R. G. Wilkinson, John Wiley & Sons, New York.
5.	Principles of Inorganic Chemistry by Puri, Sharma, and Kalia (33rd Edition), Vishal Publishing Co., Jalandhar, Delhi, 2017.
6.	Advanced Inorganic Chemistry by S. K. Agarwala and Keemtilal, Pragati Prakashan, Meerut.
7.	Advanced Inorganic Chemistry, Volume II by Gurdeep Raj, Krishna Prakashan Media Ltd., Meerut.
8.	Application to Group theory by K. Veera Reddy.

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e-resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.
-------------------------------	---

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-701
Course Level	400-499
Course Title	Inorganic Chemistry Practical
Course Outcomes:	CO1: Identify and analyze common acidic and basic radicals present in inorganic mixtures using systematic qualitative analysis techniques. CO2: Perform preliminary tests, dry tests, and wet tests for the detection of various inorganic ions. CO3: Apply principles of selective precipitation, complex formation, and redox reactions in qualitative inorganic analysis. CO4: Detect and confirm the presence of six inorganic elements, including one rare earth element, using standard analytical procedures. CO5: Interpret experimental observations accurately and record analytical results systematically. CO6: Demonstrate safe laboratory practices and proper handling of chemicals and analytical reagents during qualitative analysis.

Course Content
Inorganic Qualitative Analysis (Minimum Eight): Six elements including ONE rare earth element.

Reference Books:	
1.	Text book of Practical Inorganic chemistry – A. I. Vogel.
2.	Practical Chemistry by Dr. O. P. Pandey, D. N. Bajpai, Dr. S. Giri.
3.	Advance inorganic analysis by Agrawal, Keemtilal.
4.	Qualitative Inorganic Analysis – Vogel.
5.	Inorganic Practical by Chatwal and Anand.

Teaching-Learning Methodology	Demonstration, guided laboratory experimentation, problem-solving exercises, and collaborative learning methods are employed to develop students' skills in systematic semi-micro inorganic qualitative analysis of six elements including one rare earth element through observation, identification, separation, and confirmatory tests.

Course Code	CH-MJ-702					
Course Level	400-499					
Course Title	Organic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Recall and explain the fundamental concepts of organic reaction mechanisms, reactive intermediates, stereochemistry, and conformational analysis. CO2 : Illustrate the formation, stability, and reactivity of carbocations, carbanions, free radicals, carbenes, and nitrenes in organic reactions. CO3 : Apply mechanistic principles to predict the course and products of substitution, elimination, addition, and rearrangement reactions. CO4 : Analyze stereochemical outcomes of organic reactions using concepts of chirality, optical activity, stereoisomerism, and stereoselectivity. CO5 : Evaluate conformational stability and reaction behavior of cyclic and acyclic systems using conformational analysis. CO6 : Design and solve advanced problems involving reaction mechanisms, stereochemical interpretation, and conformational effects in organic molecules.

CO3	√	√	√			
CO4	√		√	√		
CO5	√		√	√	√	
CO6		√	√	√	√	√

Course Content		
Unit	Description	Hours
1.	REACTION MECHANISM & REACTIVE INTERMEDIATES Detailed study of organic reaction intermediates. Generation, structure, stability and reactions of Carbocations (Classical and non-classical): Norbornyl system, common carbocation rearrangements-Demjanov, Dienone-Phenol, Rupe. Carbanions: Mechanism of condensation involving enolates - Aldol, Dieckmann, Michael and Shapiro reactions. Carbenes: Mechanism of Arndt-Eistert reaction, Wolf rearrangement and Bamford Steven's rearrangement reaction. Free Radicals: Coupling of alkenes and arylation of aromatic compounds by diazonium salts. Sandmeyer reactions. Free radical rearrangements, Hunsdiecker reaction.	15 Hrs.
2.	STEREOCHEMISTRY AND CONFORMATIONAL ANALYSIS (A) Stereochemistry: Stereo chemical principles; Enantiomeric relationships; Distereomeric relationship; R-S and E-Z nomenclature; Dynamic stereochemistry: Stereo selective and Stereo specific reactions, Chiral-Prochiral relationships, Resolution of racemic modification, Optical activity in the absence of chiral carbons biphenyl, allenes, spiranes. (B) Confirmational Analysis: Interconversion of Fischer, Newman and Sawhorse projections. Simple acyclic and cyclic (chair and boat cyclohexanes, Decalins, Perhydrophenanthrene) systems. Effects of conformation on reactivity in acyclic compounds, mono and di substituted cyclohexanes and determination of their stability order.	15 Hrs.

Reference Books:	
Unit I:	
1.	Carbenes, Benzynes and Nitrenes by Gilchrist, T. L. and Rees.
2.	Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
3.	Reaction Mechanism in Organic Chemistry by S. M. Mukherji and S. P. Singh (Mc Millan India Ltd., 1976).
4.	Organic Chemistry (3/e) by J. B. Hendrickson, Donald J. Crem and George S. Rammond (McGraw-Hill Book Co. & Kogekusha Co. Ltd., 1970).
5.	Organic Chemistry (5/e) by Morrison & Boyd (Prentice Hall).
6.	Advanced Organic Chemistry by Carey & Sundberg (3 rd edition).
7.	A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
8.	Advanced Organic Chemistry, F. A. Carey and R. J. Sundberg, Plenum.
9.	Organic chemistry 2nd ed. Jonathan clayden, Nick Greeves, Stuart Warren.
10.	Reaction Mechanism and Reagents in Organic Chemistry by C. R. Chatwal (Himalaya Publishing House, Bombay, 1987).
UNIT II:	
1.	Advanced Organic Chemistry: Part A: Structure and Mechanisms; By Francis A. Carey, Richard J. Sundberg, fifth edition, Published by Springer.
2.	Advanced Organic Chemistry: Part B: Reaction and Synthesis; By Francis A. Carey, Richard J. Sundberg, fifth edition, Published by Springer.
3.	Stereochemistry of Carbon Compounds; By Ernest L. Eliel, Published by Tata McGraw-Hill Publishing Company Ltd.
4.	Basic organic stereochemistry; By Ernest Ludwig Eliel, Samuel H. Wilen, Michael P. Doyle, Published by Wiley-Interscience.
5.	Introduction to Stereochemistry; By Kurt Martin Mislow, Dover Publication INC.
6.	Stereochemistry of Organic Compounds: Principles and Applications; By D. Nasipuri, New Age International (P) Ltd. Publisher.
7.	Stereochemistry Conformation and Mechanism; By P.S. Kalsi, New Age International (P) Ltd. Publisher.
8.	Basic Stereochemistry of Organic; By Subrata Sen Gupta, First edition, Published by Oxford University Press.

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e-resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-702
Course Title	Organic Chemistry Practical
Course Outcomes:	CO1 : Explain the principles, mechanisms, and reaction conditions involved in important organic transformations such as nitration, bromination, reduction, oxidation, diazotization, Friedel–Crafts reaction, Cannizzaro reaction, aldol condensation, carboxylation, and hydrolysis. CO2 : Perform the synthesis of various organic compounds using standard laboratory procedures and appropriate purification techniques. CO3 : Apply stoichiometric calculations, reaction monitoring, and characterization methods to evaluate the yield and purity of synthesized organic compounds. CO4 : Analyze reaction mechanisms and interpret experimental observations associated with different classes of organic reactions. CO5 : Carry out quantitative estimations of organic functional groups and mixtures using volumetric and analytical techniques. CO6 : Demonstrate safe laboratory practices, proper handling of chemicals, accurate record keeping, and effective communication of experimental results.

Course Content	Preparation of organic compounds (Any six): 1. Nitration: m-Dinitro benzene from benzene 2. Bromination: p-Bromo acetanilide from acetanilide 3. Reduction: m-phenylene diamine from m-dinitrobenzene 4. Oxidation: p-Nitro benzoic acid from p-nitro toluene 5. Diazotization reaction: Preparation of Orange-II 6. Friedl-Craft's reaction: Resorcinol from resorcinol 7. Cannizzaro reaction: Benzoic acid from benzaldehyde 8. Aldol condensation: Chalcone from benzaldehyde and acetophenone 9. Carboxylation: β-Resorcylic acid from resorcinol 10. Hydrolysis: Benzoic acid from benzamide Quantitative Estimations (Any three) 1. Estimation of acid + ester 2. Estimation of acid + amide 3. Estimation of formaldehyde via oxime 4. Estimation of number of carboxylic acid (succinic acid, oxalic acid)
-----------------------	--

Reference Books:	
1.	A text book of practical organic chemistry – A. I. Vogel
2.	Practical organic Chemistry – Mann and Saunders
3.	A handbook of quantitative and qualitative analysis – H. T. Clarke
4.	Comprehensive Practical Organic Chemistry : Qualitative Analysis V K Ahluwalia & S. Dhingra.
5.	Comprehensive Practical Organic Chemistry: Preparations and Quantitative Analysis V K Ahluwalia & R. Aggarwal Universities Press.
6.	An Advance Course in practical Chemistry, A K. Nad, B. Mahapatra and A. Ghoshal

Teaching-Learning Methodology	Introduction, interaction with students in calculation of mole ratios, Carrying out experiments at each step according to the respective practical.

2.	University Examination	25

Course Code	CHP-MJ-703
Course Title	Physical Chemistry Practical
Course Outcomes:	CO1 : Apply the principles of electrochemistry, conductometry, potentiometry, pH-metry, spectrophotometry, and surface chemistry to investigate physicochemical systems. CO2 : Perform quantitative physicochemical experiments to determine dissociation constants, conductance, critical micelle concentration (CMC), molecular weight of polymers, and reaction parameters. CO3 : Analyze experimental data to evaluate reaction kinetics, activation energy, phase behavior, and thermodynamic properties using appropriate mathematical and graphical methods. CO4 : Interpret physicochemical phenomena such as ionic conductance, electrolyte behavior, surfactant properties, acid strength, and polymer characteristics based on experimental observations. CO5 : Utilize modern analytical instruments and laboratory techniques to obtain accurate and reliable physicochemical measurements. CO 6 : Demonstrate scientific reporting, data presentation, problem-solving abilities, and adherence to laboratory safety and ethical practices in physicochemical investigations.

Course Code	CHP-MJ-703
Course Title	Physical Chemistry Practical
Course Content	Perform minimum any seven experiments 1. Determine the dissociation constants of a given dibasic acid pH-metrically. 2. Determine the amount of ferrous sulphate / ferrous ammonium sulphate in given flask potentiometrically using ceric salt solution. 3. Verification of Onsager's equation and determination of equivalent conductance at infinite dilution of strong electrolytes. 4. Determine the CMC of a surfactant by conductivity measurements. 5. Calculate the molar absorptivity of each of the given two solutions (A) and (B) and also find out concentration of supplied unknown solution colorimetrically. 6. Investigation the reaction between $K_2S_2O_8$ and KI at two different temperatures and calculate the energy of activation for the reaction. 7. To study the phase diagram of a three components system Water – acetic acid – chloroform. 8. Determination of CMC and area per molecule of a surfactant by surface tension measurement. 9. Determine the molecular weight of a given polymer from viscosity measurement. 10. Determine the relative strength of chloroacetic acid and acetic acid by conductance measurement. 11. Determine the strength of acid HCl with NaOH spectrophotometrically.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT

Syllabus for With Research

**B.Sc. Honours Chemistry
Programme Semester- VII
Effective from
Academic Year: 2026-27**

VEER NARMAD SOUTH GUJRAT UNIVERSITY, SURAT

B. Sc. (Chemistry) Honours

Name of Program	Bachelor of Science Honours (Chemistry)
Program Abbreviation	B.Sc. Honours (Chemistry)
Duration	1 Year
Eligibility Criteria	B.Sc. Honours (Chemistry) ELIGIBILITY: A candidate who has obtained his/her Bachelor's Degree with chemistry with 75 % shall be considered eligible for admission in B.Sc. (Honours) Chemistry with Research.
Medium of Instruction	English
Objective of Program	The core objective of the B.Sc. Honours is to prepare the students for dynamic career in industry and academia by providing an excellent environment of teaching and research in the core and emerging areas of the discipline.
Program Outcome	Students need to build up foundation in the fundamentals & application of current chemical and scientific theories in the concerned branches of Inorganic, Organic, Analytical, Physical, Environmental and Pharmaceutical Chemistry. PO-01: <u>Advanced Knowledge & Conceptual Understanding</u>: Demonstrate in-depth knowledge of core principles and emerging trends in the chosen scientific discipline. Integrate multidisciplinary scientific concepts to address real-world challenges in research and industry. PO-02: <u>Research & Analytical Skills</u>: Develop critical thinking, problem-solving and research-oriented skills for innovation and scientific advancements. Apply modern experimental, computational and statistical tools for data analysis and evidence-based conclusions. PO-03: <u>Technological Proficiency & Instrumentation</u>: Gain expertise in advanced laboratory techniques, computational modelling and high-end scientific instrumentation. Utilize cutting-edge technologies such as artificial intelligence, bioinformatics and nanotechnology for scientific exploration. PO-04: <u>Environmental & Societal Impact</u>: Understand the role of science in addressing environmental sustainability, public health and resource management. Contribute to biodiversity conservation, sustainable agriculture and climate change mitigation through scientific solutions.

	PO-05: <u>Innovation & Entrepreneurship</u>: Apply scientific knowledge for the development of innovative products, processes and services in industry & start-ups. Promote entrepreneurship in science and technology, healthcare, analytics and environmental sciences through technology transfer. PO-06: <u>Communication & Collaborative Research</u>: Develop proficiency in scientific communication, technical writing and effective dissemination of research findings. Engage in interdisciplinary collaborations, industry-academic partnerships and global research networks. PO-07: <u>Ethical & Value-Based Scientific Practices</u>: Uphold scientific integrity, ethical research practices and social responsibility in professional and academic endeavours. Apply knowledge with a strong ethical framework, considering societal, legal and environmental implications. PO-08: <u>Lifelong Learning & Career Readiness</u>: Cultivate a mind-set for lifelong learning, professional growth and adaptability to new scientific developments. Prepare for higher education, research careers, competitive exams and industry-oriented roles in science and technology. Students need to build up foundation in the fundamentals & application of current chemical and scientific theories in the concerned branches of Inorganic, Organic, Analytical, Physical, Environmental and Pharmaceutical Chemistry.
--	---

Program Specific Outcomes	PSO1 : Explain the fundamental principles of inorganic, organic, physical, analytical, and biochemistry along with their interdisciplinary applications. PSO2 : Apply chemical concepts, laboratory techniques, and instrumental methods for qualitative, quantitative, and analytical investigations. PSO3 : Analyze chemical reactions, mechanisms, spectral data, and experimental results using scientific reasoning and problem-solving skills. PSO4 : Evaluate chemical processes, environmental impacts, industrial practices, and experimental outcomes with accuracy, safety, and ethical responsibility. PSO5 : Design and perform experiments, research projects, and innovative chemical applications using modern scientific tools and methodologies. PSO6 : Develop professional, entrepreneurial, computational, and communication skills for higher studies, research, industry, and allied chemical professions.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-701					
Course Level	400-499					
Course Tittle	Inorganic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1: Recall and explain the fundamental concepts of symmetry elements, symmetry operations, point groups, boranes, and metal clusters. CO2: Classify molecules into appropriate point groups and interpret character tables for chemical applications CO3: Apply group theory to predict molecular properties such as bonding, hybridization, IR and Raman activity, and electronic transitions. CO4: Analyze the structure and bonding of boron hydrides and metal clusters using Wade's rules and molecular orbital concepts. CO5: Evaluate the role of symmetry and cluster chemistry in organometallic, inorganic, and bioinorganic systems. CO6: Design and solve advanced chemical problems involving symmetry operations, spectral interpretation, and cluster electron counting.

Course Content		
Unit	Description	Hours
1.	SYMMETRY AND GROUP THEORY IN CHEMISTRY AND ITS APPLICATIONS Representation of Group: Preparation of matrices and vectors, similarity transformations and Classes for C_{2v}, C_{2h} and C_{3v} point groups, matrix notation for geometric transformation, Orthogonality theorem and its consequences, reducible and irreducible representation and their relation, preparation of character table for C_{2v} and C_{3v} point groups. Applications of group theory to Transformation properties of atomic orbitals and Hybridization of σ-bond for H_2O and NH_3 molecules.	15 Hrs.
2.	(A) Boron Hydride Boron hydride and its classification, Wade's Rule, Bonding in boron hydrides. Preparation, Structure and bonding in Diborane, Tetraborane (10), Penta borane (9), Penta borane (10) and dodeca borane (11) Anion. (B) Metal Clusters Introduction, Classification, carbonyl cluster, Low nuclearity carbonyl clusters, high nuclearity carbonyl clusters, electron counting scheme for HNCCS, Halides types clusters: dinuclear clusters, trinuclear clusters, tetranuclear clusters, hexanuclear cluster.	15 Hrs.

References Books:	
1.	Chemical Applications of Group Theory by F. A. Cotton (Second Edition), Wiley Eastern Limited, New Delhi, 1976.
2.	Group Theory and Its Application by P. K. Bhattacharya, Himalaya Publishing House, Mumbai, 1986.
3.	Group Theory and Symmetry by L. R. Hall, McGraw Hill, New York, 1989.
4.	Advanced Inorganic Chemistry by F. A. Cotton and R. G. Wilkinson, John Wiley & Sons, New York.
5.	Principles of Inorganic Chemistry by Puri, Sharma, and Kalia (33rd Edition), Vishal Publishing Co., Jalandhar, Delhi, 2017.
6.	Advanced Inorganic Chemistry by S. K. Agarwala and Keemtilal, Pragati Prakashan, Meerut.
7.	Advanced Inorganic Chemistry, Volume II by Gurdeep Raj, Krishna Prakashan Media Ltd., Meerut.
8.	Application to Group theory by K. Veera Reddy.

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e-resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-701
Course Level	400-499
Course Title	Inorganic Chemistry Practical
Course Outcomes:	CO1: Identify and analyze common acidic and basic radicals present in inorganic mixtures using systematic qualitative analysis techniques. CO2: Perform preliminary tests, dry tests, and wet tests for the detection of various inorganic ions. CO3: Apply principles of selective precipitation, complex formation, and redox reactions in qualitative inorganic analysis. CO4: Detect and confirm the presence of six inorganic elements, including one rare earth element, using standard analytical procedures. CO5: Interpret experimental observations accurately and record analytical results systematically. CO6: Demonstrate safe laboratory practices and proper handling of chemicals and analytical reagents during qualitative analysis.

C06		√	√	√	√	√

Course Content
Inorganic Qualitative Analysis (Minimum Eight): Six elements including ONE rare earth element.

Reference Books:	
1.	Text book of Practical Inorganic chemistry – A. I. Vogel.
2.	Practical Chemistry by Dr. O. P. Pandey, D. N. Bajpai, Dr. S. Giri.
3.	Advance inorganic analysis by Agrawal, Keemtilal.
4.	Qualitative Inorganic Analysis – Vogel.
5.	Inorganic Practical by Chatwal and Anand.

Teaching-Learning Methodology	Demonstration, guided laboratory experimentation, problem-solving exercises, and collaborative learning methods are employed to develop students' skills in systematic semi-micro inorganic qualitative analysis of six elements including one rare earth element through observation, identification, separation, and confirmatory tests.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-702					
Course Level	400-499					
Course Title	Organic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Recall and explain the fundamental concepts of organic reaction mechanisms, reactive intermediates, stereochemistry, and conformational analysis. CO2 : Illustrate the formation, stability, and reactivity of carbocations, carbanions, free radicals, carbenes, and nitrenes in organic reactions. CO3 : Apply mechanistic principles to predict the course and products of substitution, elimination, addition, and rearrangement reactions. CO4 : Analyze stereochemical outcomes of organic reactions using concepts of chirality, optical activity, stereoisomerism, and stereoselectivity. CO5 : Evaluate conformational stability and reaction behavior of cyclic and acyclic systems using conformational analysis. CO6 : Design and solve advanced problems involving reaction mechanisms, stereochemical interpretation, and conformational effects in organic molecules.

CO2	√		√			
CO3	√	√	√			
CO4	√		√	√		
CO5	√		√	√	√	
CO6		√	√	√	√	√

Course Content		
Unit	Description	Hours
1.	REACTION MECHANISM & REACTIVE INTERMEDIATES Detailed study of organic reaction intermediates. Generation, structure, stability and reactions of Carbocations (Classical and non-classical): Norbornyl system, common carbocation rearrangements-Demjanov, Dienone-Phenol, Rupe. Carbanions: Mechanism of condensation involving enolates - Aldol, Dieckmann, Michael and Shapiro reactions. Carbenes: Mechanism of Arndt-Eistert reaction, Wolf rearrangement and Bamford Steven's rearrangement reaction. Free Radicals: Coupling of alkenes and arylation of aromatic compounds by diazonium salts. Sandmeyer reactions. Free radical rearrangements, Hunsdiecker reaction.	15 Hrs.
2.	STEREOCHEMISTRY AND CONFORMATIONAL ANALYSIS (A) Stereochemistry: Stereo chemical principles; Enantiomeric relationships; Distereomeric relationship; R-S and E-Z nomenclature; Dynamic stereochemistry: Stereo selective and Stereo specific reactions, Chiral-Prochiral relationships, Resolution of racemic modification, Optical activity in the absence of chiral carbons biphenyl, allenes, spiranes. (B) Confirmational Analysis: Interconversion of Fischer, Newman and Sawhorse projections. Simple acyclic and cyclic (chair and boat cyclohexanes, Decalins, Perhydrophenanthrene) systems. Effects of conformation on reactivity in acyclic compounds, mono and di substituted cyclohexanes and determination of their stability order.	15 Hrs.

Reference Books:	
Unit I:	
1.	Carbenes, Benzynes and Nitrenes by Gilchrist, T. L. and Rees.
2.	Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
3.	Reaction Mechanism in Organic Chemistry by S. M. Mukherji and S. P. Singh (Mc Millan India Ltd., 1976).
4.	Organic Chemistry (3/e) by J. B. Hendrickson, Donald J. Crem and George S. Rammond (McGraw-Hill Book Co. & Kogekusha Co. Ltd., 1970).
5.	Organic Chemistry (5/e) by Morrison & Boyd (Prentice Hall).

B.Sc. Honours Chemistry Programme
Semester- VII
Effective from
Academic Year: 2026-27**

VEER NARMAD SOUTH GUJRAT UNIVERSITY, SURAT

B. Sc. (Chemistry) Honours

Name of Program	Bachelor of Science Honours (Chemistry)
Program Abbreviation	B.Sc. Honours (Chemistry)
Duration	1 Year
Eligibility Criteria	B.Sc. Honours (Chemistry) ELIGIBILITY:(SC/ST- 35%, OPEN/SEBC-40%), A candidate who has obtained his/her Bachelor's Degree with chemistry shall be considered eligible for admission in B.Sc. (Honours) Chemistry
Medium of Instruction	English
Objective of Program	The core objective of the B.Sc. Honours is to prepare the students for dynamic career in industry and academia by providing an excellent environment of teaching and research in the core and emerging areas of the discipline.
Program Outcome	PO1 : Acquire comprehensive knowledge of inorganic, organic, physical, analytical, and biochemistry along with their interdisciplinary applications. PO2 : Apply chemical principles, laboratory techniques, and scientific reasoning to solve qualitative and quantitative chemical problems. PO3 : Develop practical skills in experimentation, chemical analysis, handling instruments, and interpretation of experimental data. PO4 : Demonstrate critical thinking, research aptitude, and problem-solving abilities for scientific investigations and innovations. PO5 : Understand environmental sustainability, green chemistry practices, laboratory safety, and ethical responsibilities in chemical sciences. PO6 : Communicate scientific ideas effectively through reports, presentations, teamwork, and digital tools in academic and professional settings. PO7 : Prepare for higher education, research, entrepreneurship, and employment opportunities in chemical, pharmaceutical, environmental, and allied industries.

Program Specific Outcomes	Students need to build up foundation in the fundamentals & application of current chemical and scientific theories in the concerned branches of Inorganic, Organic, Analytical, Physical, Environmental and Pharmaceutical Chemistry. PSO1 : Explain the fundamental principles of inorganic, organic, physical, analytical, and biochemistry along with their interdisciplinary applications. PSO2 : Apply chemical concepts, laboratory techniques, and instrumental methods for qualitative, quantitative, and analytical investigations. PSO3 : Analyze chemical reactions, mechanisms, spectral data, and experimental results using scientific reasoning and problem-solving skills. PSO4 : Evaluate chemical processes, environmental impacts, industrial practices, and experimental outcomes with accuracy, safety, and ethical responsibility. PSO5 : Design and perform experiments, research projects, and innovative chemical applications using modern scientific tools and methodologies. PSO6 : Develop professional, entrepreneurial, computational, and communication skills for higher studies, research, industry, and allied chemical professions.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-701					
Course Level	400-499					
Course Title	Inorganic Chemistry					
Credit	Theory:	02	Practical:	0	Total:	02
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1: Recall and explain the fundamental concepts of symmetry elements, symmetry operations, point groups, boranes, and metal clusters. CO2: Classify molecules into appropriate point groups and interpret character tables for chemical applications CO3: Apply group theory to predict molecular properties such as bonding, hybridization, IR and Raman activity, and electronic transitions. CO4: Analyze the structure and bonding of boron hydrides and metal clusters using Wade's rules and molecular orbital concepts. CO5: Evaluate the role of symmetry and cluster chemistry in organometallic, inorganic, and bioinorganic systems. CO6: Design and solve advanced chemical problems involving symmetry operations, spectral interpretation, and cluster electron counting.

Course Content		
Unit	Description	Hours
1.	SYMMETRY AND GROUP THEORY IN CHEMISTRY AND ITS APPLICATIONS Representation of Group: Preparation of matrices and vectors, similarity transformations and Classes for C_{2v}, C_{2h} and C_{3v} point groups, matrix notation for geometric transformation, Orthogonality theorem and its consequences, reducible and irreducible representation and their relation, preparation of character table for C_{2v} and C_{3v} point groups. Applications of group theory to Transformation properties of atomic orbitals and Hybridization of σ-bond for H_2O and NH_3 molecules.	15 Hrs.
2.	(A) Boron Hydride Boron hydride and its classification, Wade's Rule, Bonding in boron hydrides. Preparation, Structure and bonding in Diborane, Tetraborane (10), Penta borane (9), Penta borane (10) and dodeca borane (11) Anion. (B) Metal Clusters Introduction, Classification, carbonyl cluster, Low nuclearity carbonyl clusters, high nuclearity carbonyl clusters, electron counting scheme for HNCCS, Halides types clusters: dinuclear clusters, trinuclear clusters, tetranuclear clusters, hexanuclear cluster.	15 Hrs.

References Books:	
1.	Chemical Applications of Group Theory by F. A. Cotton (Second Edition), Wiley Eastern Limited, New Delhi, 1976.
2.	Group Theory and Its Application by P. K. Bhattacharya, Himalaya Publishing House, Mumbai, 1986.
3.	Group Theory and Symmetry by L. R. Hall, McGraw Hill, New York, 1989.
4.	Advanced Inorganic Chemistry by F. A. Cotton and R. G. Wilkinson, John Wiley & Sons, New York.
5.	Principles of Inorganic Chemistry by Puri, Sharma, and Kalia (33rd Edition), Vishal Publishing Co., Jalandhar, Delhi, 2017.
6.	Advanced Inorganic Chemistry by S. K. Agarwala and Keemtilal, Pragati Prakashan, Meerut.
7.	Advanced Inorganic Chemistry, Volume II by Gurdeep Raj, Krishna Prakashan Media Ltd., Meerut.
8.	Application to Group theory by K. Veera Reddy.

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e-resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

1.	Internal Examination	25
2.	External Examination	25

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJP-701					
Course Level	400-499					
Course Title	Inorganic Chemistry Practical					
Credit	Theory:	0	Practical:	02	Total:	02
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1: Identify and analyze common acidic and basic radicals present in inorganic mixtures using systematic qualitative analysis techniques. CO2: Perform preliminary tests, dry tests, and wet tests for the detection of various inorganic ions. CO3: Apply principles of selective precipitation, complex formation, and redox reactions in qualitative inorganic analysis. CO4: Detect and confirm the presence of six inorganic elements, including one rare earth element, using standard analytical procedures. CO5: Interpret experimental observations accurately and record analytical results systematically. CO6: Demonstrate safe laboratory practices and proper handling of chemicals and analytical reagents during qualitative analysis.

C03	√	√	√			
C04	√	√	√		√	
C05		√	√	√		√
C06		√	√	√	√	√

Course Content
Inorganic Qualitative Analysis (Minimum Eight): Six elements including ONE rare earth element.

Reference Books:
1. Text book of Practical Inorganic chemistry – A. I. Vogel.
2. Practical Chemistry by Dr. O. P. Pandey, D. N. Bajpai, Dr. S. Giri.
3. Advance inorganic analysis by Agrawal, Keemtilal.
4. Qualitative Inorganic Analysis – Vogel.
5. Inorganic Practical by Chatwal and Anand.

Teaching-Learning Methodology	Demonstration, guided laboratory experimentation, problem-solving exercises, and collaborative learning methods are employed to develop students' skills in systematic semi-micro inorganic qualitative analysis of six elements including one rare earth element through observation, identification, separation, and confirmatory tests.

Course Content		
Unit	Description	Hours
1.	REACTION MECHANISM & REACTIVE INTERMEDIATES Detailed study of organic reaction intermediates. Generation, structure, stability and reactions of Carbocations (Classical and non-classical): Norbornyl system, common carbocation rearrangements-Demjanov, Dienone-Phenol, Rupe. Carbanions: Mechanism of condensation involving enolates - Aldol, Dieckmann, Michael and Shapiro reactions. Carbenes: Mechanism of Arndt-Eistert reaction, Wolf rearrangement and Bamford Steven's rearrangement reaction. Free Radicals: Coupling of alkenes and arylation of aromatic compounds by diazonium salts. Sandmeyer reactions. Free radical rearrangements, Hunsdiecker reaction.	15 Hrs.
2.	STEREOCHEMISTRY AND CONFORMATIONAL ANALYSIS (A) Stereochemistry: Stereo chemical principles; Enantiomeric relationships; Distereomeric relationship; R-S and E-Z nomenclature; Dynamic stereochemistry: Stereo selective and Stereo specific reactions, Chiral-Prochiral relationships, Resolution of racemic modification, Optical activity in the absence of chiral carbons biphenyl, allenes, spiranes. (B) Conformational Analysis: Interconversion of Fischer, Newman and Sawhorse projections. Simple acyclic and cyclic (chair and boat cyclohexanes, Decalins, Perhydrophenanthrene) systems. Effects of conformation on reactivity in acyclic compounds, mono and di substituted cyclohexanes and determination of their stability order.	15 Hrs.

Reference Books:	
Unit I:	
1.	Carbenes, Benzynes and Nitrenes by Gilchrist, T. L. and Rees.
2.	Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
3.	Reaction Mechanism in Organic Chemistry by S. M. Mukherji and S. P. Singh (Mc Millan India Ltd., 1976).
4.	Organic Chemistry (3/e) by J. B. Hendrickson, Donald J. Crem and George S. Rammond (McGraw-Hill Book Co. & Kogekusha Co. Ltd., 1970).
5.	Organic Chemistry (5/e) by Morrison & Boyd (Prentice Hall).
6.	Advanced Organic Chemistry by Carey & Sundberg (3 rd edition).
7.	A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
8.	Advanced Organic Chemistry, F. A. Carey and R. J. Sundberg, Plenum.
9.	Organic chemistry 2nd ed. Jonathan clayden, Nick Greeves, Stuart Warren.
10.	Reaction Mechanism and Reagents in Organic Chemistry by C. R. Chatwal (Himalaya Publishing House, Bombay, 1987).
UNIT II:	
1.	Advanced Organic Chemistry: Part A: Structure and Mechanisms; By Francis A. Carey, Richard J. Sundberg, fifth edition, Published by Springer.
2.	Advanced Organic Chemistry: Part B: Reaction and Synthesis; By Francis A. Carey, Richard J. Sundberg, fifth edition, Published by Springer.
3.	Stereochemistry of Carbon Compounds; By Ernest L. Eliel, Published by Tata McGraw-Hill Publishing Company Ltd.
4.	Basic organic stereochemistry; By Ernest Ludwig Eliel, Samuel H. Wilen, Michael P. Doyle, Published by Wiley-Interscience.
5.	Introduction to Stereochemistry; By Kurt Martin Mislow, Dover Publication INC.
6.	Stereochemistry of Organic Compounds: Principles and Applications; By D. Nasipuri, New Age International (P) Ltd. Publisher.
7.	Stereochemistry Conformation and Mechanism; By P.S. Kalsi, New Age International (P) Ltd. Publisher.
8.	Basic Stereochemistry of Organic; By Subrata Sen Gupta, First edition, Published by Oxford University Press.

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e-resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

Subject Type	Discipline Specific					
Course Code	CH-MJ-704 (Organic)					
Course Level	400-499					
Course Title	Integrated Organic Chemistry					
Credit	Theory:	04	Practical:	0	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Define and recall the fundamental concepts, reaction mechanisms, reagents, instrumentation, and terminology related to organic transformations, substitution and elimination reactions, UV-Visible spectrophotometry, and liquid chromatography. CO2 : Explain the principles and mechanisms of organic reactions including nucleophilic substitution and elimination pathways, as well as the theoretical basis of UV-Visible spectrophotometry and liquid chromatographic separation techniques. CO3 : Apply appropriate organic reagents, spectrophotometric methods, and chromatographic techniques for qualitative and quantitative analysis, reaction prediction, and separation of chemical compounds. CO4 : Analyze reaction mechanisms, stereochemical outcomes, spectral data, and chromatographic results to identify compounds, determine reaction pathways, and interpret analytical observations. CO5 : Evaluate the efficiency, selectivity, and applicability of organic reagents, substitution/elimination reactions, UV-Visible spectroscopic methods, and liquid chromatography techniques in chemical analysis and synthesis. CO6 : Design experimental procedures and analytical methodologies involving organic transformations, spectrophotometric analysis, and chromatographic separation for solving chemical and research-related problems.

Course Content		
Unit	Description	Hours
1.	ORGANIC TRANSFORMATION AND REAGENTS 1) Sharpless epoxidation 2) Umpolung reagent (1,3-dithiane) 3) Dess martin periodinane 4) DDQ 5) Baker's yeast 6) Diisobutyl aluminum hydride (DIBAL-H) 7) Lithium diisopropyl amide (LDA) 8) OZONE 9) Phase transfer catalyst: Crown ethers 10) Wilkinson's Catalyst	15 Hrs.
2.	SUBSTITUTION AND ELIMINATION REACTIONS A: Aliphatic Nucleophilic Substitution: The SN^1 , SN^2 , SN^i mechanisms. Reactions of Allylic halides, neighbouring group participation by -OH, -NH ₂ , -COO-, R-S-, - halogen, aromatic ring. B: Aromatic Nucleophilic Substitution: The SN^2 , SN^1 and benzyne mechanisms, Reactivity - effect of substrate structure, leaving group and attacking nucleophile, The Von Richter rearrangement. C: Elimination reaction: Hoffmann and Zaitsev's rule of elimination, E1, E2 and E1CB Reaction and their regioselectivity	15 Hrs.

3.	UV-VISIBLE SPECTROPHOTOMETRY Types of electronic transition, auxochrome, chromophore, Bathochromic effect, Hypsochromic effect, Hyperchromic effect, Hypochromic effect, Factor affecting $\lambda_{\max}$ like resonance, hyper conjugation, hydrogen bonding, steric effect, Woodward's rules for α, β-unsaturated ketones, Diene systems, aromatic system, Effect of solvent on absorption bands, law of absorption with derivation, Elementary idea of double beam automatic recording, Spectrophotometer, Application.	15 Hrs.
4.	CHROMATOGRAPHY (a) Gas Chromatography : Selection of mobile phase – Selection of stationary phase in GLC and GSC, sample introduction systems, Detectors: modified FID, ECD, and FPD. Comparison between columns and their advantages and disadvantages –Temperature programming– Derivatization in GC – Qualitative (Basic terms: retention Time, Retention Volume, Relative Retention) and Quantitative (Measurement of Area, Area Normalization Method, Internal Standard Method) Analysis. (b) Liquid Chromatography: Principle, Comparison with GC, Principle of HPLC, Instrument and significance of each component, Pumps, Guard column, Criteria in selection of mobile phase, Stationary phases (solid, liquid), Bonded phase supports, Detectors: UV absorption, RI detectors– Normal phase and Reversed phase, Gradient Elution, Method of introducing sample.	15 Hrs.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VIII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-801					
Course Level	400-499					
Course Title	Inorganic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Explain the fundamental principles of quantum mechanics, wave functions, operators, and postulates along with thermodynamic and kinetic concepts of metal complexes. CO2 : Apply Schrödinger wave equation and quantum mechanical models to simple chemical systems and calculate thermodynamic parameters related to metal complexes. CO3 : Analyze the bonding, electronic structure, stability, and reaction mechanisms of coordination compounds using quantum and kinetic theories. CO4 : Interpret thermodynamic properties such as entropy, enthalpy, free energy, and stability constants in metal complex formation and reactions. CO5 : Evaluate substitution reactions, ligand exchange mechanisms, and factors affecting kinetic behaviour and stability of coordination compounds. CO6: Develop problem-solving ability for quantum mechanical calculations and predict thermodynamic and kinetic behavior of transition metal complexes in chemical systems.

Course Content		
Unit	Description	Hours
1.	Quantum Mechanics Recapitulation: Different types of Operators, Postulates of Quantum mechanics, Particles in three dimensional box, Schrodinger's wave equation in polar co-ordinates, its separation in to R, θ and Φ , Discussion of solution of Schrodinger equation to same model system of the one dimensional harmonic oscillator, Two particle rigid rotator, Ordinary angular momentum, generalized angular, momentum, Eigen functions of angular momentum, Eigen values of angular momentum.	15 Hrs.
2.	Thermodynamic and kinetic Aspects of metal complexes A brief out line of thermodynamic stability of metal complexes, Factors affecting stability of metal complexes, Lability and inertness – labile and inert complexes, Factors affecting lability of metal complexes, Labile and inert complexes on the basis of reaction rate, VBT and CFT, Determination of stability constant by Job's method, Substitution reaction in square planar complexes e.g. Kinetic substitution reaction in Pt(II) complexes, Trans effect, Theories of Trans effect: (i) Electrostatic polarization theory (ii) π -bond theory	15 Hrs.

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-801
Course Title	Inorganic Chemistry Practical
Course Outcomes:	CO1 : Apply the principles of gravimetric and volumetric analysis for the quantitative determination of metal ions and inorganic compounds in different samples. CO2 : Perform gravimetric estimations involving precipitation, filtration, drying, ignition, and weighing techniques for accurate quantitative analysis. CO3 : Carry out volumetric titrations including redox, precipitation, complexometric, and back-titration methods for the estimation of various analytes. CO4 : Calculate the concentration, purity, composition, and percentage of constituents in ores, alloys, minerals, and industrial samples using analytical data. CO5 : Analyze experimental results, identify sources of error, and interpret quantitative data with appropriate accuracy and precision. CO6: Demonstrate safe laboratory practices, proper handling of analytical reagents, and effective use of laboratory instruments during quantitative chemical analysis.

[Subject code-2703000508022001]

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	II					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-802					
Course Level	400-499					
Course Title	Organic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Recall and explain the fundamental concepts, terminology, and mechanisms of pericyclic reactions and photochemical reactions. CO2 : Classify electrocyclic reactions, cycloaddition reactions, sigmatropic rearrangements, and photochemical processes on the basis of symmetry and reaction conditions. CO3 : Interpret stereochemical outcomes of pericyclic reactions using Woodward–Hoffmann rules and conservation of orbital symmetry principles. CO4 : Apply the concepts of excited states, Jablonski diagram, fluorescence, phosphorescence, and energy transfer in explaining photochemical phenomena. CO5 : Analyze the mechanisms and synthetic applications of photochemical and pericyclic reactions in organic chemistry. CO6 : Evaluate the significance of pericyclic and photochemical reactions in modern organic synthesis and industrial applications.

Course Content		
Unit	Description	Hours
1.	PERICYCLIC REACTIONS Introduction - Definition, Characteristics and Classification Molecular orbitals and symmetry properties of ethylene, 1,3- butadiene, 1,3,5- hexatriene and allyl systems. Electrocyclic Reactions: Woodward-Hoffman Correlation diagram and derivation of selection rules, Conrotatory and disrotatory motions, FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron system and allyl systems. Cycloaddition Reactions: Antarafacial and suprafacial additions. FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron Systems, Diels-Alder reaction, stereoselectivity. Sigmatropic rearrangements: Suprafacial and antarafacial shifts involving H & C moieties, retention and inversion of configurations. 1, 3- dipolar cycloadditions. Examples of electrocyclic, cycloaddition and sigmatropic rearrangements.	15 Hrs.

2.	PHOTO CHEMISTRY A. Energy of molecules, photochemical energy, energy transfer, electronic excitation, Jablonski diagram, laws of photochemistry, quantum efficiency. B. Photochemistry of carbonyl compounds- α - cleavage of acyclic, Cyclic and α - β unsaturated cleavage of carbonyl compounds, β -cleavage of, inter and intramolecular hydrogen abstraction, addition to carbon- carbon double bond, photo reduction of carbonyl compounds. C. Photo induce rearrangement of enones, dienones and alkenes. Photochemistry of alkenes and aromatic compounds- isomerization, dimerization and addition reactions	15 Hrs.

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-802
Course Title	Organic Chemistry Practical
Course Outcomes:	CO1 : Explain the principles, mechanisms, and synthetic applications of important organic name reactions such as Sandmeyer, Fischer Indole, Riemer–Tiemann, Skraup, Gabriel Phthalimide, and Knorr Quinoline syntheses. CO2 : Perform the synthesis of industrially important organic compounds, drugs, and intermediates using standard laboratory techniques and reaction protocols. CO3 : Apply purification techniques such as crystallization, filtration, drying, and recrystallization to obtain pure organic products. CO4 : Determine the yield, purity, and physical properties of synthesized compounds and interpret the experimental results. CO5 : Analyze reaction pathways, mechanisms, and factors affecting the efficiency and selectivity of organic syntheses. CO6 : Demonstrate safe handling of chemicals, proper laboratory practices, and effective documentation and communication of experimental findings.

Course Content		
Unit	Description	Hours
1.	UNIT-I: THEORIES OF ELECTROLYTIC CONDUCTANCE AND OVER VOLATEGE Debye-Huckel theory of strong electrolytes, relaxation effect and electrophoreticeffect, Debye Falkenhagen effect, Wein effect. Ionic strength and its determination, Debye-Huckel limiting law. Activity and activity coefficient, determination of activity coefficient by (i) solubility (solubility product principle) (ii) EMF method (cell without transference), Determination of dissociation constant of monobasic acid by conductance method and approximate EMF method, Relationship between dissociation constant and dissociation function, over voltage, determination of over voltage, theories of over voltage: combination of atom as slow process (Tafel theory), Numerical.	15 Hrs.

2.	UNIT-II: SURFACE CHEMISTRY Adsorption Multilayer Adsorption, the BET adsorption isotherms, derivation of BET equation, determination of surface area and area of cross section of molecules by BET equation. Derivation of Langmuir equation from BET equation. Explanation of different adsorption isotherms, Change in enthalpy, entropy and free energy of adsorption, Adsorption at the surface of liquid : Gibbs adsorption isotherms (derivation). Thermodynamic treatment of adsorption, Surface Active substances, orientations of surfactants on the surface of solution, surface inactive substances, surface pressure, Insoluble surface films on liquid, Numerical	15 Hrs.

Course Title	Physical Chemistry Practical
Course Content	Perform minimum any seven experiments. 1. Determine the dissociation constant and strength of borax solution pH-metrically. 2. Determine the velocity constant of the hydrolysis of ethyl acetate with sodium hydroxide at room temperature by conductance measurements. 3. Determine the solubility of silver chloride in water potentiometrically. 4. To determine the concentration of given components in a mixture colorimetrically. 5. Determine the equilibrium constant of the reaction $I^- + I_2 = I_3^-$ by distribution method. 6. Investigation the reaction between H_2O_2 and HI at two different temperatures and calculate the energy of activation for the reaction 7. Determine the formula of a complex between Cu^{+2} and NH_3 by distribution method. 8. Determine CST of Phenol -Water system 9. Determine CST of Phenol –NaCl system 10. Titrate Fe(II) against potassium permanganate spectrophotometrically 11. Determine the degree of hydrolysis and hydrolysis constant of (i) CH_3COONa (ii) NH_4Cl 12. Determination of COD of water sample. 13. Determination of phosphate by colourimetry using ammonium molybdate.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VIII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-801					
Course Level	400-499					
Course Title	Inorganic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Explain the fundamental principles of quantum mechanics, wave functions, operators, and postulates along with thermodynamic and kinetic concepts of metal complexes. CO2 : Apply Schrödinger wave equation and quantum mechanical models to simple chemical systems and calculate thermodynamic parameters related to metal complexes. CO3 : Analyze the bonding, electronic structure, stability, and reaction mechanisms of coordination compounds using quantum and kinetic theories. CO4 : Interpret thermodynamic properties such as entropy, enthalpy, free energy, and stability constants in metal complex formation and reactions. CO5 : Evaluate substitution reactions, ligand exchange mechanisms, and factors affecting kinetic behaviour and stability of coordination compounds. CO6: Develop problem-solving ability for quantum mechanical calculations and predict thermodynamic and kinetic behavior of transition metal complexes in chemical systems.

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-801
Course Title	Inorganic Chemistry Practical
Course Outcomes:	CO1 : Apply the principles of gravimetric and volumetric analysis for the quantitative determination of metal ions and inorganic compounds in different samples. CO2 : Perform gravimetric estimations involving precipitation, filtration, drying, ignition, and weighing techniques for accurate quantitative analysis. CO3 : Carry out volumetric titrations including redox, precipitation, complexometric, and back-titration methods for the estimation of various analytes. CO4 : Calculate the concentration, purity, composition, and percentage of constituents in ores, alloys, minerals, and industrial samples using analytical data. CO5 : Analyze experimental results, identify sources of error, and interpret quantitative data with appropriate accuracy and precision. CO6: Demonstrate safe laboratory practices, proper handling of analytical reagents, and effective use of laboratory instruments during quantitative chemical analysis.

C05		√	√	√	√	√
C06		√		√	√	√

Course Code	CHP-MJ-801
Course Title	Inorganic Chemistry Practical
Course Content	Quantitative Analysis • Gravimetric Estimation (Any Three) 1. Analysis of Solder alloy 2. Determine the amount of Ca as $\text{CaC}_2\text{O}_4 \cdot \text{H}_2\text{O}$ or as CaCO_3 in limestone. 3. Estimation of Cu^{2+} as CuSCN. 4. Estimation of Zn^{2+} as $\text{Zn}[(\text{NH}_4)\text{PO}_4]$. • Volumetric estimation (Any four) 1. Estimation of Iron in Iron ore. 2. Estimation of available chlorine in bleaching powder. 3. Estimation of Ca^{2+} and Pb^{2+} present in the given a mixture. 4. Determine the amount of Fe^{3+} and Cr^{3+} present in the given a mixture. 5. Determine the percentage purity of the given sample of Manganese salt. 6. Estimation of Aluminium by back Titration. 7. Determination of Cobalt By EDTA. (Complexometric Titration) 8. Determination of Zinc using Xylenol Orange as Indicator.

Reference Books:	
1.	Text book of Practical Inorganic chemistry – A. I. Vogel.
2.	Practical Chemistry by Dr. O. P. Pandey, D. N. Bajpai, Dr. S. Giri.
3.	Advance inorganic analysis by Agrawal, Keemtilal.
4.	Qualitative Inorganic Analysis – Vogel.
5.	Inorganic Practical by Chatwal and Anand

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e- resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

Semester	II					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-802					
Course Level	400-499					
Course Title	Organic Chemistry					
Credit	Theory:	02	Practical:	02	Total:	04
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Recall and explain the fundamental concepts, terminology, and mechanisms of pericyclic reactions and photochemical reactions. CO2 : Classify electrocyclic reactions, cycloaddition reactions, sigmatropic rearrangements, and photochemical processes on the basis of symmetry and reaction conditions. CO3 : Interpret stereochemical outcomes of pericyclic reactions using Woodward–Hoffmann rules and conservation of orbital symmetry principles. CO4 : Apply the concepts of excited states, Jablonski diagram, fluorescence, phosphorescence, and energy transfer in explaining photochemical phenomena. CO5 : Analyze the mechanisms and synthetic applications of photochemical and pericyclic reactions in organic chemistry. CO6 : Evaluate the significance of pericyclic and photochemical reactions in modern organic synthesis and industrial applications.

Course Content		
Unit	Description	Hours
1.	PERICYCLIC REACTIONS Introduction - Definition, Characteristics and Classification Molecular orbitals and symmetry properties of ethylene, 1,3- butadiene, 1,3,5- hexatriene and allyl systems. Electrocyclic Reactions: Woodward-Hoffman Correlation diagram and derivation of selection rules, Conrotatory and disrotatory motions, FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron system and allyl systems. Cycloaddition Reactions: Antarafacial and suprafacial additions. FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron Systems, Diels-Alder reaction, stereoselectivity. Sigmatropic rearrangements: Suprafacial and antarafacial shifts involving H & C moieties, retention and inversion of configurations. 1, 3- dipolar cycloadditions. Examples of electrocyclic, cycloaddition and sigmatropic rearrangements.	15 Hrs.

2.	PHOTO CHEMISTRY A. Energy of molecules, photochemical energy, energy transfer, electronic excitation, Jablonski diagram, laws of photochemistry, quantum efficiency. B. Photochemistry of carbonyl compounds- α - cleavage of acyclic, Cyclic and α - β unsaturated cleavage of carbonyl compounds, β -cleavage of, inter and intramolecular hydrogen abstraction, addition to carbon- carbon double bond, photo reduction of carbonyl compounds. C. Photo induce rearrangement of enones, dienones and alkenes. Photochemistry of alkenes and aromatic compounds- isomerization, dimerization and addition reactions	15 Hrs.

Evaluation Pattern		
Sr. No.	Details of the Evaluation	Marks
1.	Internal Examination	25
2.	External Examination	25

Course Code	CHP-MJ-802
Course Title	Organic Chemistry Practical
Course Outcomes:	CO1 : Explain the principles, mechanisms, and synthetic applications of important organic name reactions such as Sandmeyer, Fischer Indole, Riemer–Tiemann, Skraup, Gabriel Phthalimide, and Knorr Quinoline syntheses. CO2 : Perform the synthesis of industrially important organic compounds, drugs, and intermediates using standard laboratory techniques and reaction protocols. CO3 : Apply purification techniques such as crystallization, filtration, drying, and recrystallization to obtain pure organic products. CO4 : Determine the yield, purity, and physical properties of synthesized compounds and interpret the experimental results. CO5 : Analyze reaction pathways, mechanisms, and factors affecting the efficiency and selectivity of organic syntheses. CO6 : Demonstrate safe handling of chemicals, proper laboratory practices, and effective documentation and communication of experimental findings.

Course Content		
Unit	Description	Hours
1.	UNIT-I: THEORIES OF ELECTROLYTIC CONDUCTANCE AND OVER VOLATEGE Debye-Huckel theory of strong electrolytes, relaxation effect and electrophoreticeffect, Debye Falkenhagen effect, Wein effect. Ionic strength and its determination, Debye-Huckel limiting law. Activity and activity coefficient, determination of activity coefficient by (i) solubility (solubility product principle) (ii) EMF method (cell without transference), Determination of dissociation constant of monobasic acid by conductance method and approximate EMF method, Relationship between dissociation constant and dissociation function, over voltage, determination of over voltage, theories of over voltage: combination of atom as slow process (Tafel theory), Numerical.	15 Hrs.

2.	UNIT-II: SURFACE CHEMISTRY Adsorption Multilayer Adsorption, the BET adsorption isotherms, derivation of BET equation, determination of surface area and area of cross section of molecules by BET equation. Derivation of Langmuir equation from BET equation. Explanation of different adsorption isotherms, Change in enthalpy, entropy and free energy of adsorption, Adsorption at the surface of liquid : Gibbs adsorption isotherms (derivation). Thermodynamic treatment of adsorption, Surface Active substances, orientations of surfactants on the surface of solution, surface inactive substances, surface pressure, Insoluble surface films on liquid, Numerical	15 Hrs.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT
SYLLABUS

Program Name	B. Sc. Honours (Chemistry)					
Semester	VIII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJP-801					
Course Level	400-499					
Course Title	Inorganic Chemistry Practical					
Credit	Theory:	0	Practical:	02	Total:	02
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Apply the principles of gravimetric and volumetric analysis for the quantitative determination of metal ions and inorganic compounds in different samples. CO2 : Perform gravimetric estimations involving precipitation, filtration, drying, ignition, and weighing techniques for accurate quantitative analysis. CO3 : Carry out volumetric titrations including redox, precipitation, complexometric, and back-titration methods for the estimation of various analytes. CO4 : Calculate the concentration, purity, composition, and percentage of constituents in ores, alloys, minerals, and industrial samples using analytical data. CO5 : Analyze experimental results, identify sources of error, and interpret quantitative data with appropriate accuracy and precision. CO6: Demonstrate safe laboratory practices, proper handling of analytical reagents, and effective use of laboratory instruments during quantitative chemical analysis.

C05		√	√	√	√	√
C06		√		√	√	√

Course Code	CH-MJP-801
Course Title	Inorganic Chemistry Practical
Course Content	Quantitative Analysis • Gravimetric Estimation (Any Three) 1. Analysis of Solder alloy 2. Determine the amount of Ca as CaC_2O_4, H_2O or as CaCO_3 in limestone. 3. Estimation of Cu^{2+} as CuSCN. 4. Estimation of Zn^{2+} as $\text{Zn}[(\text{NH}_4)\text{PO}_4]$. • Volumetric estimation (Any four) 1. Estimation of Iron in Iron ore. 2. Estimation of available chlorine in bleaching powder. 3. Estimation of Ca^{2+} and Pb^{2+} present in the given a mixture. 4. Determine the amount of Fe^{3+} and Cr^{3+} present in the given a mixture. 5. Determine the percentage purity of the given sample of Manganese salt. 6. Estimation of Aluminium by back Titration. 7. Determination of Cobalt By EDTA. (Complexometric Titration) 8. Determination of Zinc using Xylenol Orange as Indicator.

Reference Books:	
1.	Text book of Practical Inorganic chemistry – A. I. Vogel.
2.	Practical Chemistry by Dr. O. P. Pandey, D. N. Bajpai, Dr. S. Giri.
3.	Advance inorganic analysis by Agrawal, Keemtilal.
4.	Qualitative Inorganic Analysis – Vogel.
5.	Inorganic Practical by Chatwal and Anand

Teaching-Learning Methodology	To meet the effective teaching and the learning requirements, teaching-learning methodology comprise classroom teaching, use of e- resources, library books, AI tools, encouraging students to participate in seminars/ workshops, presentations by students, assignments etc.

VEER NARMAD SOUTH GUJARAT UNIVERSITY, SURAT SYLLABUS						
Program Name	B. Sc. Honours (Chemistry)					
Semester	VIII					
NCrF Credit Level	6.0					
Course Type	Major					
Course Subtype	Nil					
Subject Type	Discipline Specific					
Course Code	CH-MJ-802					
Course Level	400-499					
Course Title	Organic Chemistry					
Credit	Theory:	02	Practical:	0	Total:	02
Effective From	Academic Year: 2026-2027					
Course Outcomes:	CO1 : Recall and explain the fundamental concepts, terminology, and mechanisms of pericyclic reactions and photochemical reactions. CO2 : Classify electrocyclic reactions, cycloaddition reactions, sigmatropic rearrangements, and photochemical processes on the basis of symmetry and reaction conditions. CO3 : Interpret stereochemical outcomes of pericyclic reactions using Woodward–Hoffmann rules and conservation of orbital symmetry principles. CO4 : Apply the concepts of excited states, Jablonski diagram, fluorescence, phosphorescence, and energy transfer in explaining photochemical phenomena. CO5 : Analyze the mechanisms and synthetic applications of photochemical and pericyclic reactions in organic chemistry. CO6 : Evaluate the significance of pericyclic and photochemical reactions in modern organic synthesis and industrial applications.

Course Content		
Unit	Description	Hours
1.	PERICYCLIC REACTIONS Introduction - Definition, Characteristics and Classification Molecular orbitals and symmetry properties of ethylene, 1,3- butadiene, 1,3,5- hexatriene and allyl systems. Electrocyclic Reactions: Woodward-Hoffman Correlation diagram and derivation of selection rules, Conrotatory and disrotatory motions, FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron system and allyl systems. Cycloaddition Reactions: Antarafacial and suprafacial additions. FMO and PMO approach for $4n$ and $(4n+2)\pi$ electron Systems, Diels-Alder reaction, stereoselectivity. Sigmatropic rearrangements: Suprafacial and antarafacial shifts involving H & C moieties, retention and inversion of configurations. 1, 3- dipolar cycloadditions. Examples of electrocyclic, cycloaddition and sigmatropic rearrangements.	15 Hrs.

2.	PHOTO CHEMISTRY A. Energy of molecules, photochemical energy, energy transfer, electronic excitation, Jablonski diagram, laws of photochemistry, quantum efficiency. B. Photochemistry of carbonyl compounds- α - cleavage of acyclic, Cyclic and α - β unsaturated cleavage of carbonyl compounds, β -cleavage of, inter and intramolecular hydrogen abstraction, addition to carbon- carbon double bond, photo reduction of carbonyl compounds. C. Photo induce rearrangement of enones, dienones and alkenes. Photochemistry of alkenes and aromatic compounds- isomerization, dimerization and addition reactions	15 Hrs.

Unit	Description	Hours
1.	UNIT-I: THEORIES OF ELECTROLYTIC CONDUCTANCE AND OVER VOLATEGE Debye-Huckel theory of strong electrolytes, relaxation effect and electrophoreticeffect, Debye Falkenhagen effect, Wein effect. Ionic strength and its determination, Debye-Huckel limiting law. Activity and activity coefficient, determination of activity coefficient by (i) solubility (solubility product principle) (ii) EMF method (cell without transference), Determination of dissociation constant of monobasic acid by conductance method and approximate EMF method, Relationship between dissociation constant and dissociation function, over voltage, determination of over voltage, theories of over voltage: combination of atom as slow process (Tafel theory), Numerical.	15 Hrs.

2.	UNIT-II: SURFACE CHEMISTRY Adsorption Multilayer Adsorption, the BET adsorption isotherms, derivation of BET equation, determination of surface area and area of cross section of molecules by BET equation. Derivation of Langmuir equation from BET equation. Explanation of different adsorption isotherms, Change in enthalpy, entropy and free energy of adsorption, Adsorption at the surface of liquid : Gibbs adsorption isotherms (derivation). Thermodynamic treatment of adsorption, Surface Active substances, orientations of surfactants on the surface of solution, surface inactive substances, surface pressure, Insoluble surface films on liquid, Numerical	15 Hrs.

Mapping between COs and PSOs

Course Title	Physical Chemistry Practical
Course Content	Perform minimum any seven experiments. 1. Determine the dissociation constant and strength of borax solution pH-metrically. 2. Determine the velocity constant of the hydrolysis of ethyl acetate with sodium hydroxide at room temperature by conductance measurements. 3. Determine the solubility of silver chloride in water potentiometrically. 4. To determine the concentration of given components in a mixture colorimetrically. 5. Determine the equilibrium constant of the reaction $I^- + I_2 = I_3^-$ by distribution method. 6. Investigation the reaction between H_2O_2 and HI at two different temperatures and calculate the energy of activation for the reaction 7. Determine the formula of a complex between Cu^{+2} and NH_3 by distribution method. 8. Determine CST of Phenol -Water system 9. Determine CST of Phenol –NaCl system 10. Titrate Fe(II) against potassium permanganate spectrophotometrically 11. Determine the degree of hydrolysis and hydrolysis constant of (i) CH_3COONa (ii) NH_4Cl 12. Determination of COD of water sample. 13. Determination of phosphate by colourimetry using ammonium molybdate.

Course Content		
Unit	Description	Hours
1.	Organic Name Reactions General nature, method, mechanism and synthetic applications of the following reactions: 1) Heck reaction 2) Dakin reaction 3) Darzen's glycidic ester synthesis 4) Leuckart reaction 5) Suzuki reaction 6) Willgerodt reaction 7) Ene reaction 8) H. V. Z reaction 9) Mitsunobu reaction 10) Sonagashira reaction	15 Hrs.
2.	AROMATICITY Aromaticity and Aromatic character; structure and stability of benzene, Frost circle diagram, concept of aromaticity; Resonance and chemical stabilization; Robinson methods, criteria to check aromatic character-IR, NMR, heat of hydrogenation; Huckel's rule; HMO method, Antiaromaticity, homoaromaticity, nonaromaticity; aromaticity in benzenoid compounds: naphthalene, pyrene, acenaphthylene. Aromaticity non-benzenoid compounds: azulene, tropolones, charged rings, annulenes.	15 Hrs.

3.	IR SPECTROSCOPY Introduction: Theory, Useful terms: IR region, types of vibrations: fundamental and overtones, linear and non-linear molecule, equation for vibrational frequency, selection rule, coupling interactions, Instrumentation: single beam, double beam spectrophotometers, FTIR: principle, instrument design, and function of beam splitter, radiation sources, sample cells, monochromators, detectors, sample handling, Resolution, wave number measurement, Advantages of FTIR vs. IR. hydrogen bonding information, Fermi resonance. IR spectra: group frequency, group frequency region, fingerprint region, spectra interpretations and structure elucidation.	15 Hrs.
4.	TITRIMETRIC METHODS AND ELEMENTAL ANALYSIS Solution and Their Concentration: Molarity, Molality, Normality, ppm, ppb, ppt, %w/v, %w/w, %v/v, Formality, Primary and Secondary standard, Acid Value, Density and Specific Gravity, Numerical. Non-Aqueous Titration: Protic and Aprotic Solvent, Solvent system, Dielectric constant, Titrant, Titration Curve, Determination of Equivalence point, Karl Fisher Titration. Elemental Analysis: Step on Analysis, C and H Analysis, N Analysis, Halogen Analysis and Sulphur Analysis, Elementary Idea of Modern Elemental analyzer.	15 Hrs.
